SUBJECT: Lower Duwamish Waterway Group Tissue Sample Data Validation

Dear Ms. McGroddy,

Enclosed is our revised EPA Level II and Level IV data validation review of Analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. All analyses were performed by Columbia Analytical Services, Inc., with the exception of Inorganic Arsenic which was performed by BrooksRand Trace Metals Analysis & Products. Samples were analyzed for GC/MS Semivolatiles by EPA SW 846 Method 8270C-SIM, GC/MS Polynuclear Aromatic Hydrocarbons by EPA SW 846 Method 8270C-SIM, GC Butyltins by the Krone Method, GC Chlorinated Pesticides by EPA SW 846 Method 8081A, GC Polychlorinated Biphenyls by EPA SW 846 Method 8082, Metals by EPA SW 846 Methods 6010B/6020/7471A, Inorganic Arsenic by modified EPA Method 1632 and Total Lipids by NOAA Method. Samples are referenced under the following Sample Delivery Groups: K2406232, K2406297, K2406517, K2406581, K2406932, K2407216, K2407455, K2407452, K2407596, 04BR710, and 04BR739.

Please feel free to contact us if you have any questions.

Sincerely,

Stella Cuenco

Stella S. Cuenco
Project Manager/Senior Chemist

CHEMICAL DATA QUALITY REVIEW FOR TISSUE SAMPLES

Lower Duwamish Waterway Group
LDC# 12662, 12691, 12734, 12736, & 12747

This report details the findings of an EPA Level II and Level IV data validation review of Analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. All analyses were performed by Columbia Analytical Services, Inc., with the exception of Inorganic Arsenic which was performed by BrooksRand Trace Metals Analysis & Products. Samples were analyzed for GC/MS Semivolatiles by EPA SW 846 Method 8270C-SIM, GC/MS Polynuclear Aromatic Hydrocarbons by EPA SW 846 Method 8270C-SIM, GC Butyltins by the Krone Method, GC Chlorinated Pesticides by EPA SW 846 Method 8081A, GC Polychlorinated Biphenyls by EPA SW 846 Method 8082, Metals by EPA SW 846 Methods 6010B/6020/7471A, Inorganic Arsenic by modified EPA Method 1632 and Total Lipids by NOAA Method. Samples are referenced under the following Sample Delivery Groups: K2406232, K2406297, K2406517, K2406581, K2406932, K2407216, K2407455, K2407452, K2407596, 04BR710, and 04BR739. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed and the Sample Validation Table (Attachment 2) for the sample identifications and analyses. Sample IDs ending in "**" underwent Level IV review.

The QC guidelines used for data qualification are those specified in the National Functional Guidelines for Organic Data Review (October 1999) and the National Functional Guidelines for Inorganic Data Review (July 2002). Specific QC criteria used follows the Final Benthic Invertebrate Sampling of the Lower Duwamish Waterway Quality Assurance Project Plan (July 30, 2004). Where specific guidance is not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The following items were evaluated during the review:

- Holding Times
- Sample Preservation
- Cooler Temperatures
- Instrument Calibration*
- Blanks
- Surrogates
- Matrix Spike/Matrix Spike Duplicates
- Internal Standards*
- Laboratory Control Samples
- Target Compound Identifications*
- Compound Quantitation and CRQLs*
- System Performance
- Field Duplicates

*Data were not reviewed for Level II.

Only issues which require comment or action are discussed in this report. Data deficiencies are arranged by method. Potential effects of data anomalies have been described where possible.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

12747VALA.wpd

Overall Data Assessment

QC exceedances, compound identification, compound quantitation, instrument calibration, and method blank contamination problems have warranted the qualification of a portion of the data set.

Zero percent recovery of Benzidine in the LCS have warranted the qualification of non-detected results for Benzidine as rejected (R) in the semivolatile analyses for SDGs K2407452 and K2407596. This compound is known to have poor recoveries when analyzed by method 8270C.

Compound identification problems have warranted the qualification of detected results as presumptive and estimated (NJ) in the pesticide analysis for SDG K2406232.

Compound quantitation problems have warranted the qualification of detected results as estimated (J) in the semivolatile analysis for SDG K2407216, in the pesticide analyses for SDGs K2406232, K2406517, K2406581, K2406932, K2407216, K2407452, K2407596 and in the PCB and butyltin analyses for SDG K2406517.

Instrument calibration problems have warranted the qualification of detected results for hexachlorocyclopentadiene, 4-nitrophenol and 2-methyl-4,6-dinitrophenol as estimated (J) and non-detected results as estimated (UJ) in the semivolatile analysis for SDG K2406232.

Method blank contamination have warranted the qualification of phenol as non-detected (U) in the semivolatile analysis for SDG K2406297 and naphthalene as non-detected (U) in the polynuclear aromatic hydrocarbon analysis for K2406517.

QC exceedances have warranted the qualification of detected results for semivolatile, pesticide, metal and inorganic arsenic data as estimated (J) and non-detected results as estimated (UJ) in SDGs K2406232, K2406517, SDG K2406297, K2406581, K2406932, K2407216, K2407452, K2407596 .

The required frequency of MS/MSD and Duplicates were not met for all analyses due to insufficient sample amount.

The required frequency of SRM analysis was not met for the semivolatile analyses. However, SRM analysis was performed for the polynuclear aromatic hydrocarbons analyses.

The required frequency of SRM analysis was not met for the metal and inorganic arsenic analyses.

*Field duplicates were not collected for this sampling event.

Based upon the information reviewed, the overall data quality is considered acceptable with the noted limitations.

GC/MS Semivolatiles by EPA SW 846 Method 8270C using Selected Ion Monitoring (SIM)

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding
K2406232	LDW-B1a-T** LDW-B1a-TRE** LDW-B4a-T** LDW-B4a-TRE** LDW-B2a-T** LDW-B2a-TRE** LDW-B9b-T** LDW-B9b-TRE** LDW-B6a-T** LDW-B6a-TRE**	All TCL compounds	Cooler temperature was reported at 11°C upon receipt by the laboratory, however the laboratory indicated that the samples were then immediately stored frozen.

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals. All ion abundance requirements.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 15.0% for each individual compound and less than or equal to 30.0% for calibration check compounds (CCCs).

In the case where %RSD was greater than 15.0%, the laboratory used a calibration curve to evaluate the compound. All coefficients of determination (r^2) were greater than or equal to 0.990 .

For the purposes of technical evaluation, all compounds were evaluated against the 30.0% (%RSD) National Functional Guideline criteria. Unless noted above, all compounds were within the validation criteria.

Average relative response factors (RRF) for all semivolatile target compounds and system performance check compounds (SPCCs) were greater than or equal to 0.05 as required.

Initial calibration data were not reviewed for Level II.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

Percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were within the method criteria of less than or equal to 20.0% for calibration check compounds (CCCs).

For the purposes of technical evaluation, all compounds were evaluated against the 25.0% (%D) National Functional Guideline criteria. Unless noted above, all compounds were within the validation criteria with the following exceptions:

Associated SDG	Date	Compound	%D	Associated Samples	Flag	A or P
K2406232	10/4/04	Hexachlorocyclopentadiene 4-Nitrophenol 2-Methyl-4,6-dinitrophenol	45 28 32	LDW-B1a-TRE** LDW-B4a-TRE** LDW-B2a-TRE** LDW-B9b-TRE** LDW-B6a-TRE** LDW-B3b-TRE** LDW-B7b-TRE** KWG0414745-3	J (all detects) UJ (all non-detects)	A

All of the continuing calibration RRF values were greater than or equal to 0.05 .

Continuing calibration data were not reviewed for Level II.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No semivolatile contaminants were found in the method blanks with the following exceptions:

Associated SDG	Method Blank ID	Extraction Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
K2406232 K2406297 K2406581 K2406932 K2407216	KWG0414745-3	9/28/04	Phenol	22 ug/Kg	LDW-B1a-T** LDW-B1a-TRE** LDW-B4a-T** LDW-B4a-TRE** LDW-B2a-T** LDW-B2a-TRE** LDW-B9b-T** LDW-B9b-TRE** LDW-B6a-T** LDW-B6a-TRE** LDW-B3b-T** LDW-B3b-TRE** LDW-B7b-T** LDW-B7b-TRE** LDW-B6b-T LDW-B6b-TRE LDW-B8b-T LDW-B8b-TRE LDW-B10b-T LDW-B10b-TRE LDW-B7a-T LDW-B7a-TRE LDW-B8a-T LDW-B8a-TRE LDW-B10a-T LDW-B10a-TRE LDW-B3a-T LDW-B3a-TRE LDW-B9a-T LDW-B9a-TDL LDW-B9a-TRE
K2407452 K2407596	KWG0416318-5	10/21/04	Bis(2-ethylhexyl)phthalate	200 ug/Kg	LDW-B5a-T LDW-B4b-T LDW-B5b-T LDW-B1b-T LDW-B2b-T

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found in the associated method blanks with the following exceptions:

Associated SDG	Sample	Compound TIC (RT in minutes)	Reported Concentration	Modified Final Concentration
K2406297	LDW-B8b-T	Phenol	89 ug/Kg	500U ug/Kg
K2406297	LDW-B8b-TRE	Phenol	99 ug/Kg	500U ug/Kg

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits for SDG K2406517 with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
K2406517	LDW-C2-T2MS/MSD (LDW-C2-T2)	4-Chloro-3-methylphenol	-	132 (20-130)	-	J (all detects)	A

The laboratory has indicated that there was insufficient sample for analysis of the matrix spike and matrix spike duplicate for SDGs K2406232, K2406297, K2406581, K2406932, K2407216, K2407452, and K2407596.

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits for SDG K2406517.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	RPD (Limits)	Flag	A or P
K2406232 K2406297 K2406581 K2406932 K2407216	KWG0414745-1/2 LDW-B1a-T** LDW-B1a-TRE** LDW-B4a-T** LDW-B4a-TRE** LDW-B2a-T** LDW-B2a-TRE** LDW-B9b-T** LDW-B9b-TRE** LDW-B6a-T** LDW-B6a-TRE** LDW-B3b-T** LDW-B3b-TRE** LDW-B7b-T** LDW-B7b-TRE** LDW-B6b-T LDW-B6b-TRE LDW-B8b-T LDW-B8b-TRE LDW-B10b-T LDW-B10b-TRE LDW-B7a-T LDW-B7a-TRE LDW-B8a-T LDW-B8a-TRE LDW-B10a-T LDW-B10a-TRE LDW-B3a-T LDW-B3a-TRE LDW-B9a-T LDW-B9a-TDL LDW-B9a-TRE	Aniline 2,4-Dimethylphenol Benzidine	19 (20-130) 5 (20-130) 2 (20-130)	- 6 (20-130) 1 (20-130)	- - 64 (≤50)	J (all detects) UJ (all non-detects)	P

Associated SDG	LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	RPD (Limits)	Flag	A or P
K2407452 K2407596	KWG0416318-3/4 (LDW-B5a-T LDW-B4b-T LDW-B5b-T LDW-B1b-T LDW-B2b-T)	Benzidine	0 (20-130)	13 (20-130)	200 (≤50)	J (all detects) R (all non-detects)	P

No standard reference material analysis data were associated with these samples.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

Internal standards data were not reviewed for Level II.

XI. Target Compound Identifications

All target compound identifications were within validation criteria.

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Criteria	Flag	A or P
K2407216	LDW-B9a-T LDW-B9a-TRE	4-Methylphenol	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects)	A

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory for Level IV.

Tentatively identified compounds data were not reviewed for Level II.

XIV. System Performance

The system performance was acceptable.

System performance data were not reviewed for Level II.

XV. Overall Assessment

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Associated SDG	Sample	Compound	Flag	A or P
K2406232	LDW-B1a-T**	Phenol	R	A
K2406232	LDW-B1a-TRE**	All TCL compounds except Phenol	R	A
K2406232 K2406581	LDW-B4a-T** LDW-B7a-T	Benzoic acid 4-Chloro-3-methylphenol	R R	A

*XVI. Field Duplicates

No field duplicates were identified in these SDGs.

XVII. Field Blanks

No field blanks were identified in these SDGs.

Polynuclear Aromatic Hydrocarbons and Alkylated Polynuclear Aromatic Hydrocarbons by EPA SW 846 Method 8270C using Selected Ion Monitoring (SIM).

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Criteria
K2406232	LDW-B1a-T** LDW-B1a-TRE** LDW-B4a-T** LDW-B4a-TRE** LDW-B2a-T** LDW-B2a-TRE** LDW-B9b-T** LDW-B9b-TRE** LDW-B6a-T** LDW-B6a-TRE**	All TCL compounds	Cooler temperature was reported at 11°C upon receipt by the laboratory.	Cooler temperature must be 4±2°C .

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals. All ion abundance requirements.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all target compounds and system monitoring compounds were within validation criteria.

Initial calibration data were not reviewed for Level II.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 25.0% .

All of the continuing calibration RRF values were within validation criteria.

Continuing calibration data were not reviewed for Level II.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polynuclear aromatic hydrocarbon contaminants were found in the method blanks with the following exceptions:

Associated SDG	Method Blank ID	Extraction Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
K2406232 K2406297 K2406581 K2406932 K2407216	KWG0414844-3	9/29/04	Naphthalene Biphenyl Fluoranthene Pyrene	0.58 ug/Kg 0.14 ug/Kg 0.072 ug/Kg 0.11 ug/Kg	LDW-B1a-T** LDW-B1a-TRE** LDW-B4a-T** LDW-B4a-TRE** LDW-B2a-T** LDW-B2a-TRE** LDW-B9b-T** LDW-B9b-TRE** LDW-B6a-T** LDW-B6a-TRE** LDW-B3b-T** LDW-B3b-TRE** LDW-B7b-T** LDW-B7b-TRE** LDW-B6b-T LDW-B6b-TRE LDW-B8b-T LDW-B8b-TRE LDW-B10b-T LDW-B10b-TRE LDW-B7a-T LDW-B8a-TRE LDW-B10a-TRE LDW-B3a-TRE LDW-B9a-TRE

K2406517	LDW-C1-T	Naphthalene	0.79 ug/Kg	1.0U ug/Kg
K2406517	LDW-C2-T1	Naphthalene	0.71 ug/Kg	1.0U ug/Kg
K2406517	LDW-C2-T2	Naphthalene	0.83 ug/Kg	1.0U ug/Kg
K2406517	LDW-C10-T2	Naphthalene	0.59 ug/Kg	1.0U ug/Kg
K2406517	LDW-C10-T1	Naphthalene	0.57 ug/Kg	0.99U ug/Kg
K2406517	LDW-C5-T	Naphthalene	0.96 ug/Kg	1.0U ug/Kg
K2406517	LDW-C3-T2	Naphthalene	0.91 ug/Kg	1.0U ug/Kg
K2406517	LDW-C3-T1	Naphthalene	0.83 ug/Kg	1.0U ug/Kg
K2406517	LDW-C9-T	Naphthalene	0.78 ug/Kg	1.0U ug/Kg
K2406517	LDW-C6-T	Naphthalene	0.80 ug/Kg	1.0U ug/Kg
K2406517	LDW-C4-T	Naphthalene	1.0 ug/Kg	1.0U ug/Kg

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits for SDG K2406517.

The laboratory has indicated that there was insufficient sample for analysis of the matrix spike and matrix spike duplicate for SDGs K2406232, K2406297, K2406581, K2406932, K2407216, K2407452, and K2407596.

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits for SDG K2406517.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

No standard reference material analysis for Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Dibenzofuran, Acenaphthene, Fluorene, Anthracene, and Dibenz(a,h)anthracene were associated with these samples.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

Internal standards data were not reviewed for Level II.

XI. Target Compound Identifications

All target compound identifications were within validation criteria.

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria.

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory for Level IV.

Tentatively identified compounds data were not reviewed for Level II.

XIV. System Performance

The system performance was acceptable.

System performance data were not reviewed for Level II.

XV. Overall Assessment

Data flags have been summarized at the end of the report.

***XVI. Field Duplicates**

No field duplicates were identified in these SDGs.

XVII. Field Blanks

No field blanks were identified in these SDGs.

GC Chlorinated Pesticides by EPA SW 846 Method 8081A

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding
K2406232	LDW-B1a-T** LDW-B4a-T** LDW-B2a-T** LDW-B9b-T** LDW-B6a-T**	All TCL compounds	The laboratory indicated the samples were frozen upon receipt.

II. GC/ECD Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Initial calibration of single and multicomponent compounds was performed for the primary (quantitation) column and confirmation column as required by this method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

Retention time windows were evaluated and considered technically acceptable.

Initial calibration data were not reviewed for Level II.

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent difference (%D) of the second source calibration standard were less than or equal to 15.0% for all compounds.

Retention times (RT) of all compounds in the calibration standards were within QC limits.

The individual 4,4'-DDT and Endrin breakdowns (%BD) were less than or equal to 15.0%.

Continuing calibration data were not reviewed for Level II.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No chlorinated pesticide contaminants were found in the method blanks with the following exceptions:

Associated SDG	Method Blank ID	Extraction Date	Compound	Concentration	Associated Samples
K2407452 K2407596	KWG0416041-7	10/15/04	Methoxychlor	0.81 ug/Kg	LDW-B5a-T LDW-B4b-T LDW-B5b-T LDW-B1b-T LDW-B2b-T

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits with the following exceptions:

Associated SDG	Sample	Surrogate	%R (Limits)	Compound	Flag	A or P
K2406297	LDW-B10b-T	Tetrachloro-m-xylene	156 (30-150)	All TCL compounds	J (all detects)	P

VII. Matrix Spike/Matrix Spike Duplicates

Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
K2406517	LDW-C2-T2MS/MSD (LDW-C2-T2)	Endrin aldehyde	32 (30-150)	29 (30-150)	-	J (all detects) UJ (all non-detects)	A

The laboratory has indicated that there was insufficient sample for analysis of the matrix spike and matrix spike duplicate for SDGs K2406232, K2406297, K2406581, K2406932, K2407216, K2407452, and K2407596.

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits in SDG K2406517 and K2407596.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

Standard reference material were within QC limits with the following exceptions:

Associated SDG	SRM ID	Compound	Concentration (Limits)	Associated Samples	Flag	A or P
K2406517	SRM 1945	delta-BHC	16 ug/Kg (1.3-8.2)	LDW-C8-T LDW-C7-T2 LDW-C7-T1 LDW-C1-T LDW-C2-T1 LDW-C2-T2 LDW-C10-T2 LDW-C10-T1 LDW-C5-T LDW-C3-T2 LDW-C3-T1 LDW-C9-T LDW-C6-T LDW-C4-T	J (all detects)	P
K2406517	SRM 1945	beta-BHC	2.1 ug/Kg (3.3-14)	LDW-C8-T LDW-C7-T2 LDW-C7-T1 LDW-C1-T LDW-C2-T1 LDW-C2-T2 LDW-C10-T2 LDW-C10-T1 LDW-C5-T LDW-C3-T2 LDW-C3-T1 LDW-C9-T LDW-C6-T LDW-C4-T	J (all detects) UJ (all non-detects)	P

K2407452 K2407596	SRM 1945	beta-BHC	3.1 ug/Kg (3.3-14)	LDW-B5a-T LDW-B4b-T LDW-B5b-T LDW-B1b-T LDW-B2b-T	J (all detects) UJ (all non-detects)	P

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Pesticide Cleanup Checks

a. Florisil Cartridge Check

Although florisil cleanup was not required by the method, it was performed by the laboratory for EPA Level IV.

Florisil cartridge check data were not reviewed for Level II.

b. GPC Calibration

Although GPC cleanup was not required by the method, it was performed by the laboratory for EPA Level IV.

GPC cleanup data were not reviewed for Level II.

XI. Target Compound Identification

All target compound identifications were within validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Flag	A or P
K2406232	LDW-B1a-T** LDW-B4a-T** LDW-B2a-T** LDW-B9b-T** LDW-B6a-T** LDW-B3b-T** LDW-B7b-T**	All detected compounds	Due to the presence of PCBs, all detected results were qualified as presumptive and estimated.	NJ (all detects)	A

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and Reported CRQLs

All compound quantitation and CRQLs were within validation criteria.

The sample results for detected compounds from the two columns were within 40.0% relative percent differences (RPD) with the following exceptions:

Associated SDG	Sample	Compound	%RPD	Flag	A or P

XIII. Overall Assessment of Data

Data flags are summarized at the end of this report.

*XIV. Field Duplicates

No field duplicates were identified in these SDGs.

XV. Field Blanks

No field blanks were identified in these SDGs.

Polychlorinated Biphenyls by EPA SW 846 Method 8082

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding
K2406232	LDW-B1a-T** LDW-B4a-T** LDW-B2a-T** LDW-B9b-T** LDW-B6a-T**	All TCL compounds	Cooler temperature was reported at 11°C upon receipt by the laboratory, however the laboratory indicated that the samples were then immediately stored frozen.

II. GC/ECD Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Initial calibration of multicomponent compounds was performed for the primary (quantitation) column as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

Retention time windows were evaluated and considered technically acceptable.

Initial calibration data were not reviewed for Level II.

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) of calibration factors in continuing standard mixtures were within the 15.0% QC limits.

The percent difference (%D) of the second source calibration standard were less than or equal to 15.0% for all compounds.

All of the continuing calibration RRF values were greater than or equal to 0.05 .

Retention times (RT) of all compounds in the calibration standards were within QC limits.

Continuing calibration data were not reviewed for Level II.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polychlorinated biphenyl contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there was insufficient sample for analysis of the matrix spike and matrix spike duplicate for SDGs K2406232, K2406297, K2406581, K2406932, K2407216, K2407452, and K2407596.

Percent recoveries (%R) and relative percent differences (RPD) were within QC limits in SDG K2406517.

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits in SDG K2406517 and K2407596.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Pesticide Cleanup Checks

a. Florisil Cartridge Check

Although florisil cleanup was not required by the method, it was performed by the laboratory for EPA Level IV.

Florisil cartridge check data were not reviewed for Level II.

b. GPC Calibration

Although GPC cleanup was not required by the method, GPC cleanup was performed by the laboratory for EPA Level IV.

Although sulfuric acid cleanup was not required by the method, sulfuric acid cleanup was performed by the laboratory for EPA Level IV.

GPC and sulfuric acid cleanup data were not reviewed for Level II.

XI. Target Compound Identification

All target compound identifications were within validation criteria.

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and Reported CRQLs

All compound quantitation and CRQLs were within validation criteria.

The sample results for detected compounds from the two columns were within 40.0% relative percent differences (RPD) with the following exceptions:

Associated SDG	Sample	Compound	%RPD	Flag	A or P
K2406517	LDW-C8-T	Aroclor-1248	83.1	J (all detects)	A
K2406517	LDW-C7-T2	Aroclor-1248	91	J (all detects)	A
K2406517	LDW-C7-T1	Aroclor-1248	86	J (all detects)	A

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Overall Assessment of Data

Data flags are summarized at the end of this report.

*XIV. Field Duplicates

No field duplicates were identified in these SDGs.

XV. Field Blanks

No field blanks were identified in these SDGs.

Metals by EPA SW 846 Methods 6010B/6020/7471A

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met.

Calibration data were not reviewed for Level II.

III. Blanks

Method blanks were reviewed for each matrix as applicable.

Data qualification by the initial, continuing and preparation blanks (ICB/CCB/PBs) was based on the maximum contaminant concentration in the ICB/CCB/PBs in the analysis of each analyte. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Associated SDG	Method Blank ID	Analyte	Maximum Concentration	Associated Samples
K2406232	ICB/CCB	Cobalt Nickel	0.0187 ug/L 0.178 ug/L	LDW-B1a-T** LDW-B4a-T** LDW-B2a-T** LDW-B9b-T** LDW-B6a-T** LDW-B3b-T**
K2406232	ICB/CCB	Cobalt	0.0347 ug/L	LDW-B7b-T**

Sample concentrations were compared to the maximum contaminant concentrations detected in the ICB/CCB/PBs. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated method blanks.

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

ICP Interference check sample analysis data were not reviewed for Level II.

V. Matrix Spike Analysis

The laboratory has indicated that there was insufficient sample for analysis of the matrix spike for SDGs K2406232, K2406297, K2406581, K2406932, K2407216, K2407452, and K2407596.

Percent recoveries (%R) were within QC limits in SDGs K2406517.

The laboratory has indicated that there was insufficient sample for analysis of the duplicate sample for SDGs K2406232, K2406297, K2406581, K2406932, K2407216 K2407452, and K2407596.

Results were within QC limits in SDG K2406517.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	LCS ID (Associated Samples)	Analyte	LCS %R (Limits)	LCSD %R (Limits)	RPD (Limits)	Flag	A or P
K2406232 K2406581 K2407216	LCS/LCSD (LDW-B1a-T** LDW-B4a-T** LDW-B2a-T** LDW-B9b-T** LDW-B6a-T** LDW-B3b-T** LDW-B7b-T** LDW-B7a-T LDW-B3a-T LDW-B9a-T)	Silver	49 (60-130)	-	48 (≤30)	J (all detects) R (all non-detects)	P

Since silver was detected in all the associated samples, this finding did not warrant rejection (R) of the data.

Standard reference material were within QC limits for samples associated with SDG K2407452 and K2407596 for Mercury only.

No standard reference material analysis data were associated with the samples in SDG K2406232, K2406297, K2406581, K2406932, and K2407216 for all compounds.

No standard reference material analysis data were associated with the samples in SDG K2406517 for Antimony, Molybdenum, Thallium, and Vanadium.

No standard reference material analysis data were associated with the samples in SDG K2407452 and K2407596 for all ICP/MS metals.

VIII. Internal Standards (ICP-MS)

All internal standard areas and retention times were within QC limits.

Internal standards data were not reviewed for Level II.

IX. Furnace Atomic Absorption QC

All graphite furnace atomic absorption QC were within validation criteria

*X. ICP Serial Dilution

ICP serial dilution analyses were reviewed for each matrix as applicable. The analysis criteria were met with the following exceptions:

Associated SDG	Diluted Sample	Analyte	%D (Limits)	Associated Samples	Flag	A or P
K2406232 K2406581 K2407216	LDW-B5b-TL	Cadmium Cobalt Copper Silver	15 (≤10) 15 (≤10) 17 (≤10) 15 (≤10)	LDW-B1a-T** LDW-B4a-T** LDW-B2a-T** LDW-B9b-T** LDW-B6a-T** LDW-B3b-T** LDW-B7b-T** LDW-B7a-T LDW-B3a-T LDW-B9a-T	J (all detects) UJ (all non-detects)	A
K2406297 K2406932	LDW-B8a-TL	Cobalt Copper Nickel Silver	15 (≤10) 12 (≤10) 22 (≤10) 11 (≤10)	LDW-B6b-T LDW-B8b-T LDW-B10b-T LDW-B8a-T LDW-B10a-T	J (all detects) UJ (all non-detects)	A
K2406517	LDW-C2-T2L	Arsenic	11 (≤10)	LDW-C8-T LDW-C7-T2 LDW-C7-T1 LDW-C1-T LDW-C2-T1 LDW-C2-T2 LDW-C10-T2 LDW-C10-T1 LDW-C5-T LDW-C3-T2 LDW-C3-T1 LDW-C9-T LDW-C6-T LDW-C4-T	J (all detects) UJ (all non-detects)	A
K2407452 K2407596	LDW-B4b-TL	Cadmium Nickel	23 (≤10) 11 (≤10)	LDW-B5a-T LDW-B4b-T LDW-B5b-T LDW-B1b-T LDW-B2b-T	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A

*Indicates change as the result of report review.

XI. Sample Result Verification

All sample result verifications met validation criteria.

Sample result verification data were not reviewed for Level II.

XII. Overall Assessment of Data

Data flags have been summarized at the end of this report.

*XIII. Field Duplicates

No field duplicates were identified in these SDGs.

XIV. Field Blanks

No field blanks were identified in these SDGs.

Arsenic by EPA SW 846 Method 6020

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met.

Calibration data were not reviewed for Level II.

III. Blanks

Method blanks were reviewed for each matrix as applicable.

Data qualification by the initial, continuing and preparation blanks (ICB/CCB/PBs) was based on the maximum contaminant concentration in the ICB/CCB/PBs in the analysis of each analyte. No contaminant concentrations were found in the initial, continuing and preparation blanks.

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

ICP Interference check sample analysis data were not reviewed for Level II.

V. Matrix Spike Analysis

Matrix spike (MS) samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits for SDG K2407455.

VI. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits for SDG K2407455.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

Standard reference material were within QC limits.

VIII. Internal Standards (ICP-MS)

All internal standard percent recoveries (%R) were within QC limits.

ICP-MS data were not reviewed for Level II.

IX. Furnace Atomic Absorption QC

Graphite furnace atomic absorption was not utilized in these SDGs.

X. ICP Serial Dilution

ICP serial dilution was not required by the method.

XI. Sample Result Verification

All sample result verifications met validation criteria.

Sample result verification data were not reviewed for Level II.

XII. Overall Assessment of Data

Data flags have been summarized at the end of this report.

*XIII. Field Duplicates

No field duplicates were identified in these SDGs.

XIV. Field Blanks

No field blanks were identified in these SDGs.

Inorganic Arsenic by modified EPA Method 1632

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met.

Calibration data were not reviewed for Level II.

III. Blanks

Method blanks were reviewed for each matrix as applicable.

Data qualification by the initial, continuing and preparation blanks (ICB/CCB/PBs) was based on the maximum contaminant concentration in the ICB/CCB/PBs in the analysis of each analyte. No contaminant concentrations were found in the initial, continuing and preparation blanks.

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

ICP Interference check sample analysis data were not reviewed for Level II.

V. Matrix Spike Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits for SDGs 04BR710 and 04BR739 with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
04BR739	B1-C-T4MS/MSD (B1-C-T1 B1-C-T2 B1-C-T3 B1-C-T4 B1-C-T5 B1-C-T6 SP-C-T1 SP-C-T2 SP-C-T3 SP-C-T4 SP-C-T5 SP-C-T6)	Inorganic arsenic	132.4 (75-125)	131.3 (75-125)	-	J+ (all detects)	A
04BR739	SP-C-T4MS/MSD (B1-C-T1 B1-C-T2 B1-C-T3 B1-C-T4 B1-C-T5 B1-C-T6 SP-C-T1 SP-C-T2 SP-C-T3 SP-C-T4 SP-C-T5 SP-C-T6)	Inorganic arsenic	-	135.5 (75-125)	-	J+ (all detects)	A

VI. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in SDGs 04BR710 or 04BR739, and therefore duplicate analyses were not performed for these SDGs.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

Standard reference material were within QC limits for SDG 04BR739.

Standard reference material were not performed for inorganic arsenic for SDG 04BR710.

VIII. Internal Standards (ICP-MS)

All internal standard percent recoveries (%R) were within QC limits.

ICP-MS data were not reviewed for Level II.

IX. Furnace Atomic Absorption QC

Graphite furnace atomic absorption was not utilized in these SDGs.

X. ICP Serial Dilution

ICP serial dilution was not required by the method.

XI. Sample Result Verification

All sample result verifications met validation criteria.

Sample result verification data were not reviewed for Level II.

XII. Overall Assessment of Data

Data flags have been summarized at the end of this report.

XIII. Field Duplicates

No field duplicates were identified in these SDGs.

XIV. Field Blanks

No field blanks were identified in these SDGs.

Total Lipids by NOAA Method

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

a. Initial Calibration

All criteria for the initial calibration of each method were met.

Initial calibration data were not reviewed for Level II.

b. Calibration Verification

Calibration verification frequency and analysis criteria were met for each method when applicable.

Continuing calibration data were not reviewed for Level II.

III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the method blanks.

IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

V. Duplicates/Triplicates

The laboratory has indicated that there was insufficient sample for analysis of the duplicate sample for SDGs K2406232, K2406297, K2406581, K2406932, and K2407216.

Duplicate (DUP) and triplicate (TRP) sample analyses were reviewed for each matrix as applicable in SDGs K2406517, K2407596 and K2407455. Relative percent differences (RPD) were within QC limits.

VI. Laboratory Control Samples

Laboratory control samples were not required by the method.

VII. Sample Result Verification

All sample result verifications met validation criteria.

Sample result verification data were not reviewed for Level II.

VIII. Overall Assessment of Data

Data flags are summarized at the end of this report.

*IX. Field Duplicates

No field duplicates were identified in these SDGs.

X. Field Blanks

No field blanks were identified in these SDGs.

GC Butyltins By Krone Method

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding
K2406232	LDW-B1a-T** LDW-B4a-T** LDW-B2a-T** LDW-B9b-T** LDW-B6a-T** LDW-B3b-T**	All TCL compounds	Cooler temperature was reported at 11°C upon receipt by the laboratory, however the laboratory indicated that the samples were then immediately stored frozen.

II. Calibration

a. Initial Calibration

Initial calibration of compounds was performed for the primary (quantitation) column and confirmation column as required by this method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

Retention time windows were evaluated and considered technically acceptable for samples on which EPA Level IV review was performed.

Initial calibration data were not reviewed for Level II.

b. Calibration Verification

Calibration verification was performed at the required frequencies.

The percent differences (%D) of calibration factors in continuing standard mixtures were within the 25.0% QC limits.

The percent difference (%D) of the second source calibration standard were less than or equal to 25.0% for all compounds.

Retention times (RT) of all compounds in the calibration standards were within QC limits for samples on which EPA Level IV review was performed.

Continuing calibration data were not reviewed for Level II.

III. Blanks

Method blanks were reviewed for each matrix as applicable. No butyltin contaminants were found in the method blanks.

IV. Accuracy and Precision Data

a. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

b. Matrix Spike/(Matrix Spike) Duplicates

The laboratory has indicated that there was insufficient sample for analysis of the matrix spike and matrix spike duplicate for SDGs K2406232, K2406297, K2406581, K2406932, K2407216, K2407452, and K2407596.

Percent recoveries (%R) and relative percent differences (RPD) were not within QC limits in SDG K2406517. Since the sample concentration was greater than the spiked concentration, no data were qualified.

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits in SDG K2406517.

c. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

Standard reference material were within QC limits.

No standard reference material was analyzed for Tetra-n-butyltin.

V. Target Compound Identification

All target compound identifications were within validation criteria.

Target compound identifications data were not reviewed for Level II.

VI. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Criteria	Flag	A or P
K2406517	LDW-C8-T LDW-C7-T2 LDW-C7-T1 LDW-C1-T LDW-C2-T1 LDW-C2-T2 LDW-C10-T2 LDW-C10-T1 LDW-C5-T LDW-C3-T2 LDW-C3-T1 LDW-C9-T LDW-C6-T LDW-C4-T	Tri-n-butyltin	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects)	A

The sample results for detected compounds from the two columns were within 40.0% relative percent differences (RPD) with the following exceptions:

Associated SDG	Sample	Compound	%RPD	Flag	A or P
K2406517	LDW-C8-T	Di-n-butyltin	61	J (all detects)	A
K2406517	LDW-C9-T	Di-n-butyltin	93	J (all detects)	A
K2406517	LDW-C8-TDL	Di-n-butyltin	200	J (all detects)	A

Compound quantitation and CRQLs data were not reviewed for Level II.

VII. System Performance

The system performance was acceptable.

System performance data were not reviewed for Level II.

VIII. Overall Assessment of Data

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Associated SDG	Sample	Compound	Flag	A or P
K2406517	LDW-C8-T LDW-C7-T2 LDW-C7-T1 LDW-C1-T LDW-C2-T1 LDW-C2-T2 LDW-C10-T2 LDW-C10-T1 LDW-C5-T LDW-C3-T2 LDW-C3-T1 LDW-C9-T LDW-C6-T LDW-C4-T	Tri-n-butyltin	R	A
K2406517	LDW-C1-T LDW-C2-T2 LDW-C10-T2 LDW-C10-T1 LDW-C5-T LDW-C3-T2 LDW-C9-T	Di-n-butyltin	R	A
K2406517	LDW-C8-TDL LDW-C7-T2DL LDW-C7-T1DL LDW-C2-T1DL LDW-C3-T1DL LDW-C6-TDL LDW-C4-TDL	All TCL compounds except Tri-n-butyltin	R	A
K2406517	LDW-C1-TDL LDW-C2-T2DL LDW-C10-T2DL LDW-C10-T1DL LDW-C5-TDL LDW-C3-T2DL LDW-C9-TDL	All TCL compounds except Tri-n-butyltin Di-n-butyltin	R	A

Data flags are summarized at the end of this report.

*IX. Field Duplicates

No field duplicates were identified in these SDGs.

X. Field Blanks

No field blanks were identified in these SDGs.

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS Instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?	✓			
Did the initial calibration meet the curve fit acceptance criteria?	✓			
Were all percent relative standard deviations (%RSD) $\leq$ 30% and relative response factors (RRF) $\geq$ 0.05?	✓			
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Were all percent differences (%D) $\leq$ 25% and relative response factors (RRF) $\geq$ 0.05?		✓		
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
VI. Surrogate spikes				
Were all surrogate %R within QC limits?	✓			
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?	✓		✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.		✓		DUP
Was a MS/MSD analyzed every 20 samples of each matrix?		✓

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

RRF = $(A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard
S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported RRF (1000 std)	Recalculated RRF (1000 std)	Reported Average RRF (initial)	Recalculated Average RRF (initial)	Reported %RSD	Recalculated %RSD

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

V_i = Volume of extract injected in microliters (ul)

V_t = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 1 , A :

Conc. = $\frac{(21629)(1000)(4)(1)(\quad)}{(8828)(0.910)(2.02)(1)(\quad)}$

= 532.2 µg/kg

VALIDATION FINDINGS CHECKLIST

Reviewer: 9
2nd Reviewer: 4

Method: Semivolatiles (EPA SW 846 Method 8270C)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS Instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?	✓			
Did the initial calibration meet the curve fit acceptance criteria?	✓			
Were all percent relative standard deviations (%RSD) $\leq$ 30% and relative response factors (RRF) $\geq$ 0.05?	✓			
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Were all percent differences (%D) $\leq$ 25% and relative response factors (RRF) $\geq$ 0.05?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
VI. Surrogate spikes				
Were all surrogate %R within QC limits?	✓			
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.		✓		
Was a MS/MSD analyzed every 20 samples of each matrix?		✓		

Validation Area	Yes	No	NA	Findings/Comments
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?			✓	
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Internal standards				
Were internal standard area counts within -50% or +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds from the associated calibration standard?	✓			
XI. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XII. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Tentatively identified compounds (TICs)				
Were the major ions (> 10 percent relative intensity) in the reference spectrum evaluated in sample spectrum?			✓	
Were relative intensities of the major ions within ± 20% between the sample and the reference spectra?			✓	
Did the raw data indicate that the laboratory performed a library search for all required peaks in the chromatograms (samples and blanks)?		✓		
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			

Validation Area	Yes	No	NA	Findings/Comments
XVI. Field duplicates				
Field duplicate pairs were identified in this SDG.				
Target compounds were detected in the field duplicates.				
XVII. Field blanks				
Field blanks were identified in this SDG.				
Target compounds were detected in the field blanks.

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

RRF = $(A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard
S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported RRF (600 std)	Recalculated RRF (600 std)	Reported Average RRF (Initial)	Recalculated Average RRF (initial)	Reported %RSD	Recalculated %RSD
1	ICAL	10/5/14	Phenol (1st internal standard)

$$\text{Concentration} = \frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

V_i = Volume of extract injected in microliters (ul)

V_t = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 1, 3:

$$\text{Conc.} = \frac{(1812)(1000)(1)(1)(\quad)}{(13588)(1.3)(2.02)(1)(\quad)}$$

VALIDATION FINDINGS CHECKLIST

Page: 1 of 2
Reviewer: B
2nd Reviewer: E

Method: Pesticides/PCBs (EPA SW 846 Method 8081/8082)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.		✓		
II. GC/ECD Instrument performance check				
Was the instrument performance found to be acceptable?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Was a linear fit used for evaluation? If yes, were all percent relative standard deviations (%RSD) $\leq$ 20%?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?	✓			
Did the initial calibration meet the curve fit acceptance criteria?	✓			
Were the RT windows properly established?	✓			
Were the required standard concentrations analyzed in the initial calibration?				
IV. Continuing calibration				
What type of continuing calibration calculation was performed? ___%D or ___%R	✓			
Were Evaluation mix standards analyzed prior to the initial calibration and sample analysis?	✓			
Were endrin and 4,4'-DDT breakdowns $\leq$ 15%.0 for individual breakdown in the Evaluation mix standards?	✓			
Was a continuing calibration analyzed daily?	✓			
Were all percent differences (%D) $\leq$ 15%.0 or percent recovieries 85-115%?	✓			
Were all the retention times within the acceptance windows?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Were extract cleanup blanks analyzed with every batch requiring clean-up?			✓	
Was there contamination in the method blanks or clean-up blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within the QC limits?	✓			
If the percent recovery (%R) of one or more surrogates was outside QC limits, was a reanalysis performed to confirm %R?	✓			
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?	✓			

Validation Area	Yes	No	NA	Findings/Comments
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.			✓	
Was a MS/MSD analyzed every 20 samples of each matrix?			✓	
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?			✓	
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?			✓	
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Target compound identification				
Were the retention times of reported detects within the RT windows?	✓			
XI. Compound quantitation/CRQLs				
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions, dry weight factors, and clean-up activities applicable to level IV validation?	✓			
XII. System performance				
System performance was found to be acceptable.	✓			
XIII. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XIV. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target compounds were detected in the field duplicates.			✓	
XV. Field blanks				
Field blanks were identified in this SDG.		✓		
Target compounds were detected in the field blanks.			✓

METHOD: GC ____ / HPLC ____

The calibration Factor (CF), average CF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

CF = A/C
average CF = sum of the CF/number of standards
%RSD = 100 * (S/X)

A = Area of compound,
C = Concentration of compound,
S = Standard deviation of the CF
X = Mean of the CFs

#	Standard ID	Calibration Date	Compound	Reported CF (50 std)	Recalculated CF (50 std)	Reported Average CF (initial)	Recalculated Average CF (initial)	Reported %RSD	Recalculated %RSD

Method: Pesticides/PCBs (EPA SW 846 Method 8081/8082)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/ECD Instrument performance check				
Was the instrument performance found to be acceptable?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Was a linear fit used for evaluation? If yes, were all percent relative standard deviations (%RSD) ≤ 20%?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?	✓			
Were the RT windows properly established?	✓			
Were the required standard concentrations analyzed in the initial calibration?	✓			
IV. Continuing calibration				
What type of continuing calibration calculation was performed? ✓ %D or ___ %R	✓			
Were Evaluation mix standards analyzed prior to the initial calibration and sample analysis?			✓	
Were endrin and 4,4'-DDT breakdowns ≤ 15%.0 for individual breakdown in the Evaluation mix standards?			✓	
Was a continuing calibration analyzed daily?	✓			
Were all percent differences (%D) ≤ 15%.0 or percent recovieries 85-115%?	✓			
Were all the retention times within the acceptance windows?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Were extract cleanup blanks analyzed with every batch requiring clean-up?			✓	
Was there contamination in the method blanks or clean-up blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within the QC limits?	✓			
If the percent recovery (%R) of one or more surrogates was outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓

2nd Reviewer:

Method: Metals (EPA SW 846 Method 6010/7000/6020) 4

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% (80-120% for mercury and 85-115% for cyanide) QC limits?	✓			
Were all initial calibration correlation coefficients ≥ 0.995?	✓			
Was a midrange cyanide standard distilled?			✓	
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
IV. ICP Interference Check Sample				
Were ICP interference check samples performed daily?	✓			
Were the AB solution percent recoveries (%R) with the 80-120% QC limits?	✓			
IV. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.		✓		
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.			✓	
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of +/- RL(+/-2X RL for soil) was used for samples that were ≤ 5X the RL, including when only one of the duplicate sample values were ≤ 5X the RL.			✓	
V. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% QC limits for water samples and laboratory established QC limits for soils?		✓		
VI. Furnace Atomic Absorption QC				
If MSA was performed, was the correlation coefficients ≥ 0.995?			✓	
Do all applicable analysies have duplicate injections?	✓			

LDC #: 12662A4
SDG #: K160632

VALIDATION FINDINGS CHECKLIST

Page: 1 of 1
Reviewer: MV
2nd Reviewer: [illegible]

Validation Area	Yes	No	NA	Findings/Comments
For sample concentrations > RL, are applicable duplicate injection RSD values < 20%?	✓			
Were analytical spike recoveries within the 85-115% QC limits?			✓	Hybrid
VII. ICP Serial Dilution				
Was an ICP serial dilution analyzed if analyte concentrations were > 50X the IDL?	✓			
Were all percent differences (%Ds) ≤ 10%?		✓		
Was there evidence of negative interference? If yes, professional judgement will be used to qualify the data.		✓		
VIII. Internal Standards (EPA SW 846 Method 6020)				
Were all the percent recoveries (%R) within the 30-120% of the intensity of the internal standard in the associated initial calibration?	✓			
If the %Rs were outside the criteria, was a reanalysis performed?			✓	
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?			✓	
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Sample Result Verification				
Were RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XI. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XII. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target analytes were detected in the field duplicates.			✓	
XIII. Field blanks				
Field blanks were identified in this SDG.		✓	✓	
Target analytes were detected in the field blanks.			✓

METHOD: Trace Metals (EPA SW 846 Method 6010/7000) 6020

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Were all instruments calibrated daily, each set-up time, and were the proper number of standards used?

Y N N/A Were all initial and continuing calibration verification percent recoveries (%R) within the control limits of 90-110% for all analytes except mercury (80-120%) and cyanide (85-115%)?

LEVEL IV ONLY:

Y N N/A Was a midrange cyanide standard distilled?

Y N N/A Are all correlation coefficients ≥0.995?

Y N N/A Were recalculated results acceptable? See Level IV Initial and Continuing Calibration Recalculation Worksheet for recalculations.

METHOD: Trace Metals (EPA SW 846 Method 6010/7000/6020

An initial and continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found x 100 / True

Where, Found = concentration (in ug/L) of each analyte measured in the analysis of the ICV or CCV solution
True = concentration (in ug/L) of each analyte in the ICV or CCV source

Standard ID	Type of Analysis	Element	Found (ug/L)	True (ug/L)	Recalculated %R	Reported %R	Acceptable (Y/N)
ICV	ICP (Initial calibration)	Cr	507.2	500	101	101	Y
↓	GFAA (Initial calibration)	Se	10.15	10	102	102	↓
↓	CVAA (Initial calibration)	Hg	4.98	5.0	100	100	↓
CCV	ICP (Continuing calibration)	Zn	485.5	500	97	97	↓
↓	GFAA (Continuing calibration)	Se	9.78	10	98	98	↓
↓	CVAA (Continuing calibration)	Hg	5.08	5.0	102	102	↓
ICV	~~Cyanide~~ (Initial calibration) ICP/MS	Tl	25.85	25	103	103	↓
CCV	~~Cyanide~~ (Continuing calibation) ICP/MS	Sb	24.46	25	98	98	↓

Comments: Refer to Calibration Verification findings worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

VALIDATION FINDINGS WORKSHEET
Level IV Recalculation Worksheet

Page: 1 of 1
Reviewer: MM
2nd Reviewer:

METHOD: Trace Metals (EPA SW 846 Method 6010/7000/6020

Percent recoveries (%R) for an ICP interference check sample, a laboratory control sample and a matrix spike sample were recaluculated using the following formula:

$$\%R = \frac{Found}{True} \times 100$$

Where, Found = Concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = Concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

$$RPD = \frac{|S-D|}{(S+D)/2} \times 100$$

Where, S = Original sample concentration
D = Duplicate sample concentration

An ICP serial dilution percent difference (%D) was recalculated using the following formula:

$$\%D = \frac{|I-SDR|}{I} \times 100$$

Where, I = Initial Sample Result (mg/L)
SDR = Serial Dilution Result (mg/L) (Instrument Reading x 5)

Sample ID	Type of Analysis	Element	Found / S / I (units)	True / D / SDR (units)	Recalculated %R / RPD / %D	Reported %R / RPD / %D	Acceptable (Y/N)
TCSAB	ICP interferance check	V	468.5	500	94	94	Y
LCS	Laboratory control sample	Pb	482.5	500	97	96	Y
MS	Matrix spike		(SSR-SR)				
↓	Duplicate

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)/6020

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

(Y) N N/A Have results been reported and calculated correctly?
(Y) N N/A Are results within the calibrated range of the instruments and within the linear range of the ICP?
(Y) N N/A Are all detection limits below the CRDL?

Detected analyte results for 1 were recalculated and verified using the following equation:

Concentration = $\frac{(RD)(FV)(Dil)}{(In.\ Vol.)(\%S)}$

RD = Raw data concentration
FV = Final volume (ml)
In. Vol. = Initial volume (ml) or weight (G)
Dil = Dilution factor
%S = Decimal percent solids

Recalculation:

$Cu = \frac{104.3\ ug/L \times 0.02\ L \times 5}{2.38\ g} = 4.38\ ug/g$

Sample ID	Analyte	Reported Concentration (ug/kg)	Calculated Concentration (ug/kg)	Acceptable (Y/N)

METHOD: Trace Metals (EPA SW 846 Method 6010/7000/6020

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y (N) N/A If analyte concentrations were > 50X the IDL, was an ICP serial dilution analyzed?
Y (N) N/A Were ICP serial dilution percent differences (%D) ≤10%?
Y (N) N/A Is there evidence of negative interference? If yes, professional judgement will be used to qualify the data.

LEVEL IV ONLY:

Y N (N/A) Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

Method: Metals (EPA SW 846 Method 6010/7000/6020)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% (80-120% for mercury and 85-115% for cyanide) QC limits?	✓			
Were all initial calibration correlation coefficients ≥ 0.995?	✓			
Was a midrange cyanide standard distilled?			✓	
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
IV. ICP Interference Check Sample				
Were ICP interference check samples performed daily?	✓			
Were the AB solution percent recoveries (%R) with the 80-120% QC limits?	✓			
IV. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.	✓			
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of +/- RL(+/-2X RL for soil) was used for samples that were ≤ 5X the RL, including when only one of the duplicate sample values were ≤ 5X the RL.	✓			
V. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% QC limits for water samples and laboratory established QC limits for soils?	✓			
VI. Furnace Atomic Absorption QC				
If MSA was performed, was the correlation coefficients ≥ 0.995?			✓	
Do all applicable analysies have duplicate injections?			✓	

LDC #: 27368A
SDG #: K2407455

VALIDATION FINDINGS CHECKLIST

Page: 1 of 1
Reviewer: MV
2nd Reviewer: AP

Validation Area	Yes	No	NA	Findings/Comments
For sample concentrations > RL, are applicable duplicate injection RSD values < 20%?			✓	
Were analytical spike recoveries within the 85-115% QC limits?			✓	
VII. ICP Serial Dilution				
Was an ICP serial dilution analyzed if analyte concentrations were > 50X the IDL?	✓			
Were all percent differences (%Ds) ≤ 10%?	✓			
Was there evidence of negative interference? If yes, professional judgement will be used to qualify the data.			✓	
VIII. Internal Standards (EPA SW 846 Method 6020)				
Were all the percent recoveries (%R) within the 30-120% of the intensity of the internal standard in the associated initial calibration?	✓			
If the %Rs were outside the criteria, was a reanalysis performed?			✓	
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?			✓	
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Sample Result Verification				
Were RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XI. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XII. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target analytes were detected in the field duplicates.			✓	
XIII. Field blanks				
Field blanks were identified in this SDG.		✓		
Target analytes were detected in the field blanks.			✓

VALIDATION FINDINGS WORKSHEET
Initial and Continuing Calibration Calculation Verification

Page: 1 of 1
Reviewer: MV
2nd Reviewer:

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

An initial and continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found x 100 / True

Where, Found = concentration (in ug/L) of each analyte measured in the analysis of the ICV or CCV solution
True = concentration (in ug/L) of each analyte in the ICV or CCV source

Standard ID	Type of Analysis	Element	Found (ug/L)	True (ug/L)	Recalculated %R	Reported %R	Acceptable (Y/N)
ICV	ICP (Initial calibration)	Hg	25.69	25.0	103	103	Y
	GFAA (Initial calibration)						
	CVAA (Initial calibration)						
CCV	ICP (Continuing calibration)	Hg	23.52	25.0	94	94	
	GFAA (Continuing calibration)						
	CVAA (Continuing calibration)						
	Cyanide (Initial calibration)

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Percent recoveries (%R) for an ICP interference check sample, a laboratory control sample and a matrix spike sample were recaluculated using the following formula:

$$\%R = \frac{Found}{True} \times 100$$

Where, Found = Concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = Concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

$$RPD = \frac{|S-D|}{(S+D)/2} \times 100$$

Where, S = Original sample concentration
D = Duplicate sample concentration

An ICP serial dilution percent difference (%D) was recalculated using the following formula:

$$\%D = \frac{|I-SDR|}{I} \times 100$$

Where, I = Initial Sample Result (mg/L)
SDR = Serial Dilution Result (mg/L) (Instrument Reading x 5)

Sample ID	Type of Analysis	Element	Found / S / I (units)	True / D / SDR (units)	Recalculated %R / RPD / %D	Reported %R / RPD / %D	Acceptable (Y/N)
ICSAB	ICP interference check	Ag	21.97	20	110	110	Y
LCS	Laboratory control sample		19.85 ~~18.6~~	18.0	110	110	
13	Matrix spike		(SSR-SR) 22.1	28.4	78	78	
14	Duplicate		1.695	1.681	0.5	1	
3	ICP serial dilution		18.58	19.68	6	6	

Comments: Refer to appropriate worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% (80-120% for mercury and 85-115% for cyanide) QC limits?	✓			
Were all initial calibration correlation coefficients ≥ 0.995?	✓			
Was a midrange cyanide standard distilled?			✓	
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓	✓		
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✗	✓		
IV. ICP Interference Check Sample				
Were ICP interference check samples performed daily?			✓	
Were the AB solution percent recoveries (%R) with the 80-120% QC limits?			✓	
IV. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.	✓			
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of +/- RL(+/-2X RL for soil) was used for samples that were ≤ 5X the RL, including when only one of the duplicate sample values were ≤ 5X the RL.	✓			
V. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% QC limits for water samples and laboratory established QC limits for soils?	✓			
VI. Furnace Atomic Absorption QC				
If MSA was performed, was the correlation coefficients ≥ 0.995?			✓	
Do all applicable analysies have duplicate injections?

VALIDATION FINDINGS CHECKLIST

Reviewer: [illegible]
2nd Reviewer: [illegible]

Method: ____ GC ____ HPLC

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.		✓		
II. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Was a linear fit used for evaluation? If yes, were all percent relative standard deviations (%RSD) ≤ 20%?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?			✓	
Were the RT windows properly established?	✓			
IV. Continuing calibration				
What type of continuing calibration calculation was performed? ____%D or ____%R	✓			
Was a continuing calibration analyzed daily?	✓			
Were all percent differences (%D) ≤ ~~15%~~ 25.0 or percent recoveries 85-115%?	✓			
Were all the retention times within the acceptance windows?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within the QC limits?	✓			
If the percent recovery (%R) of one or more surrogates was outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.			✓	
Was a MS/MSD analyzed every 20 samples of each matrix?			✓	
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?			✓	
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓

Initial Calibration Calculation Verification

Reviewer: PT
2nd Reviewer: DC

METHOD: GC ✓ HPLC ____

The calibration Factor (CF), average CF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

CF = A/C
average CF = sum of the CF/number of standards
%RSD = 100 * (S/X)

A = Area of compound,
C = Concentration of compound,
S = Standard deviation of the CF
X = Mean of the CFs

#	Standard ID	Calibration Date	Compound	Reported CF (50 std)	Recalculated CF (523 std)	Reported Average CF (initial)	Recalculated Average CF (initial)	Reported %RSD	Recalculated %RSD
1	CAL3856 RTX-1 GC26	9/24/04	Tetra-n-butyltin	84100	84100	82000	82000	5.7	5.7

~~Laboratory Control Samples (LCS)~~ SRM

Reviewer: EJ
2nd Reviewer: JL

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Were a laboratory control samples (LCS) and laboratory control sample duplicate (LCSD) analyzed for each matrix in this SDG?

Y N N/A Were the LCS percent recoveries (%R) and relative percent differences (RPD) within the QC limits?

Level IV/D Only

Y N N/A Was an LCS analyzed every 20 samples for each matrix or whenever a sample extraction was performed?

SUBJECT: Lower Duwamish Waterway Group Sediment Sample Data Validation

Dear Ms. McGroddy,

Enclosed is our revised EPA Level II and Level IV data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The primary analyses were performed by Columbia Analytical Services, Inc. Samples were analyzed for GC/MS Semivolatiles by EPA SW 846 Method 8270C, GC/MS Polynuclear Aromatic Hydrocarbons by EPA SW 846 Method 8270C-SIM, GC Butyltins by the Krone Method, GC Chlorinated Pesticides by EPA SW 846 Method 8081A, GC Polychlorinated Biphenyls by EPA SW 846 Method 8082, Metals by EPA SW 846 Methods 6010B/6020/7471A, and Total Organic Carbon and Particle Size by PSEP Method. Samples are referenced under the following Sample Delivery Groups: K2406516, K2406170, K2406226, K2406296, K2406519, K2406580, K2407012, K2407469, K2407471, K2407473, and K2407595.

Please feel free to contact us if you have any questions.

Sincerely,

Stella S. Cuenco
Project Manager/Senior Chemist

CHEMICAL DATA QUALITY REVIEW FOR SEDIMENT SAMPLES

Lower Duwamish Waterway Group
LDC# 12631, 12682, 12691, 12734 & 12740

This report details the findings of an EPA Level II and Level IV data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The primary analyses were performed by Columbia Analytical Services, Inc. Samples were analyzed for GC/MS Semivolatiles by EPA SW 846 Method 8270C, GC/MS Polynuclear Aromatic Hydrocarbons by EPA SW 846 Method 8270C-SIM, GC Butyltins by the Krone Method, GC Chlorinated Pesticides by EPA SW 846 Method 8081A, GC Polychlorinated Biphenyls by EPA SW 846 Method 8082, Metals by EPA SW 846 Methods 6010B/6020/7471A, and Total Organic Carbon and Particle Size by PSEP Method. Samples are referenced under the following Sample Delivery Groups: K2406516, K2406170, K2406226, K2406296, K2406519, K2406580, K2407012, K2407469, K2407471, K2407473, and K2407595. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed and the Sample Validation Table (Attachment 2) for the sample identifications and analyses. Sample IDs ending in "**" underwent Level IV review.

The QC guidelines used for data qualification are those specified in the National Functional Guidelines for Organic Data Review (October 1999) and the National Functional Guidelines for Inorganic Data Review (July 2002). Specific QC criteria used follows the Final Benthic Invertebrate Sampling of the Lower Duwamish Waterway Quality Assurance Project Plan (July 30, 2004). Where specific guidance is not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The following items were evaluated during the review:

- Holding Times
- Sample Preservation
- Cooler Temperatures
- Instrument Calibration*
- Blanks
- Surrogates
- Matrix Spike/Matrix Spike Duplicates
- Internal Standards*
- Laboratory Control Samples
- Target Compound Identifications*
- Compound Quantitation and CRQLs*
- System Performance
- Field Duplicates

*Data were not reviewed for Level II.

Only issues which require comment or action are discussed in this report. Data deficiencies are arranged by method. Potential effects of data anomalies have been described where possible.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

Overall Data Assessment

QC exceedances, compound identification, compound quantitation, instrument calibration, and method blank contamination problems have warranted the qualification of a portion of the data set.

Zero percent recoveries of Benzidine in the LCS /LCSD have warranted the qualification of non-detected results for Benzidine as rejected (R) in the semivolatile analyses for SDGs K2406516, K2406170, K2406226, K2406296, K2406519, K2406580, K2407012, K2407473 and K2407595. This compound is known to have poor recoveries when analyzed by method 8270C.

Compound identification problems have warranted the qualification of detected results as presumptive and estimated (NJ) in the pesticide analysis for SDG K2406170.

Compound quantitation problems have warranted the qualification of detected results as estimated (J) in the polynuclear aromatic hydrocarbon analyses for SDGs K2406516, K2406170 and K2406226, in the pesticide analyses for SDGs K2406516, K2406580, K2407012, K2406170, K2406226, K2406296, K2406519, K247473 and K2407595, in the PCB analyses for SDGs K2406516, K2406296 and K2407012 and in the butyltin analyses for SDGs K2406226, K2407595.

Instrument calibration problems have warranted the qualification of detected results as estimated (J) and non-detected results as estimated (UJ) for hexachlorocyclopentadiene in the semivolatile analysis for SDG K2406170 and for methoxychlor in the pesticide analysis for SDG K2406170.

Method blank contamination have warranted the qualification of several compounds. Phenol was qualified as non-detected (U) in the semivolatile analysis for SDGs K2406170, K2406226, K2406296, K2406580, K2407012 and K2407595 and bis(2-ethylhexylphthalate was qualified as non-detected (U) in SDGs K2406170 and K2407012. Naphthalene was qualified as non-detected (U) in the polynuclear aromatic hydrocarbon analyses for SDGs K2406296, K2406580, K2407012 and K2407595. Thallium and silver was qualified as non-detected (U) in the metals analysis for SDG K2406170.

QC exceedances have warranted the qualification of detected results for semivolatile, polynuclear aromatic hydrocarbon, pesticide, PCB, metal and butyltin data as estimated (J) and non-detected results as estimated (UJ) in SDGs K2406296, K2407473, SDG K2407595, K2406516, K2406170, K2406226, K2406519, K2406580 and K2407012.

The required frequency of MS and Duplicate analyses was not met for Mercury.

The required frequency of SRM analysis was not met for the semivolatile analyses. However, SRM analysis was performed for the polynuclear aromatic hydrocarbons analyses.

*Field duplicates were not collected for this sampling event.

Based upon the information reviewed, the overall data quality is considered acceptable with the noted limitations.

GC/MS Semivolatiles by EPA SW 846 Method 8270C using Selected Ion Monitoring (SIM)

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding
K2406170	LDW-B2a-S** LDW-B6a-S** LDW-B4a-S** LDW-B1a-S** LDW-B9b-S**	All TCL compounds	Cooler temperature was reported at 11°C upon receipt by the laboratory, however the laboratory indicated that the samples were then immediately stored frozen.

II. GC/MS Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for selected compounds.

A curve fit, based on the initial calibration, was established for quantitation for selected compounds. The coefficient of determination (r^2) was greater than or equal to 0.990 .

Average relative response factors (RRF) for all target compounds and system monitoring compounds were within validation criteria.

Initial calibration data were not reviewed for Level II.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 25.0% .

The percent difference (%D) of the second source calibration standard were less than or equal to 25.0% for all compounds with the following exceptions:

Associated SDG	Date	Compound	%D	Associated Samples	Flag	A or P
K2406170	9/26/04	Hexachlorocyclopentadiene	26	LDW-B2a-S** LDW-B6a-S** LDW-B4a-S** LDW-B1a-S** LDW-B9b-S**	J (all detects) UJ (all non-detects)	A

All of the continuing calibration RRF values were within validation criteria.

Continuing calibration data were not reviewed for Level II.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No semivolatile contaminants were found in the method blanks with the following exceptions:

Method Blank ID	Extraction Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
KWG0414281-5	9/22/04	Phenol Bis(2-ethylhexyl)phthalate	3.2 ug/Kg 3.0 ug/Kg	All samples in SDG K2406170/K2406226 /K2406296K2406519 /K2406580/K2407012
KWG0415420-5	10/8/04	Phenol Bis(2-ethylhexyl)phthalate	2.4 ug/Kg 2.2 ug/Kg	All samples in SDG K2407473/K2407595

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found in the associated method blanks with the following exceptions:

Associated SDG	Sample	Compound TIC (RT in minutes)	Reported Concentration	Modified Final Concentration
K2406170	LDW-B6a-S** (2x)	Phenol	31 ug/Kg	60U ug/Kg
K2406170	LDW-B4a-S** (2x)	Phenol	23 ug/Kg	60U ug/Kg
K2406170	LDW-B1a-S**	Bis(2-ethylhexyl)phthalate	15 ug/Kg	200U ug/Kg
K2406226	LDW-B7b-S (2x)	Phenol	10 ug/Kg	60U ug/Kg
K2406226	LDW-B3b-S (5x)	Phenol	52 ug/Kg	150U ug/Kg
K2406296	LDW-B8b-S	Phenol	7.3 ug/Kg	32U ug/Kg

Associated SDG	Sample	Compound TIC (RT in minutes)	Reported Concentration	Modified Final Concentration
K2406296	LDW-B10b-S	Phenol	10 ug/Kg	30U ug/Kg
K2406580	LDW-B7a-S (2x)	Phenol	13 ug/Kg	60U ug/Kg
K2407012	LDW-D10a-S (2x)	Phenol Bis(2-ethylhexyl)phthalate	1100 ug/Kg 39 ug/Kg	1100U ug/Kg 400U ug/Kg
K2407595	LDW-B5b-S	Phenol	11 ug/Kg	30U ug/Kg

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits with the following exceptions:

Associated SDG	Sample	Surrogate	%R (Limits)	Compound	Flag	A or P
K2406296	LDW-B8b-S	Nitrobenzene-d5 2-Fluorobiphenyl	38 (40-130) 25 (40-130)	Bis(2-chloroethyl)ether 1,3-Dichlorobenzene 1,4-Dichlorobenzene 1,2-Dichlorobenzene N-Nitroso-di-n-propylamine Hexachloroethane Nitrobenzene Isophorone Bis(2-chloroethoxy)methane 1,2,4-Trichlorobenzene 4-Chloroaniline Hexachlorobutadiene Hexachlorocyclopentadiene 2-Chloronaphthalene 2-Nitroaniline Dimethylphthalate 2,6-Dinitrotoluene 3-Nitroaniline 2,4-Dinitrophenol Diethylphthalate 4-Chlorophenyl-phenyl ether 4-Nitroaniline N-Nitrosodiphenylamine 4-Bromophenyl-phenylether Hexachlorobenzene Carbazole Di-n-butylphthalate Butylbenzylphthalate 3,3'-Dichlorobenzidine Bis(2-ethylhexyl)phthalate Di-n-octylphthalate Bis(2-chloroisopropyl)ether Aniline N-Nitrosodimethylamine Benzyl alcohol Benzidine	J (all detects) UJ (all non-detects)	P

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits in SDG K2406516 and K2407595 with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
K2407595	LDW-B2b-SMS/MSD (LDW-B2b-S)	1,4-Dichlorobenzene	-	38 (40-130)	-	J (all detects) UJ (all non-detects)	A

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits in SDG K2406516 and K2407595.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	RPD (Limits)	Flag	A or P

No standard reference material analysis associated with samples in these SDGs.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

Internal standards data were not reviewed for Level II.

XI. Target Compound Identifications

All target compound identifications were within validation criteria.

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria.

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory for Level IV.

Tentatively identified compounds data were not reviewed for Level II.

XIV. System Performance

The system performance was acceptable.

System performance data were not reviewed for Level II.

XV. Overall Assessment

Data flags have been summarized at the end of the report.

***XVI. Field Duplicates**

No field duplicates were identified in these SDGs.

XVII. Field Blanks

No field blanks were identified in these SDGs.

Polynuclear Aromatic Hydrocarbons and Alkylated Polynuclear Aromatic Hydrocarbons by EPA SW 846 Method 8270C using Selected Ion Monitoring (SIM).

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding
K2406170	LDW-B2a-S** LDW-B6a-S** LDW-B4a-S** LDW-B4a-SDL** LDW-B1a-S** LDW-B9b-S**	All TCL compounds	Cooler temperature was reported at 11°C upon receipt by the laboratory, however the laboratory indicated that the samples were then immediately stored frozen.

II. GC/MS Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all target compounds and system monitoring compounds were within validation criteria.

Initial calibration data were not reviewed for Level II.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 25.0% .

The percent difference (%D) of the second source calibration standard were less than or equal to 25.0% for all compounds.

All of the continuing calibration RRF values were within validation criteria.

Continuing calibration data were not reviewed for Level II.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polynuclear aromatic hydrocarbon contaminants were found in the method blanks with the following exceptions:

Method Blank ID	Extraction Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
KWG0413012-5	9/1/04	Naphthalene	0.51 ug/Kg	All samples in SDG K2406516
KWG0414432-7	9/22/04	Naphthalene	0.59 ug/Kg	All samples in SDGs K2406170/K2406226/ K2406296/K2406519/
KWG0413278-4	9/3/04	Naphthalene 2-Methylnaphthalene	0.78 ug/Kg 0.35 ug/Kg	All samples in SDG K2406580
KWG0416619-6	10/25/04	Naphthalene	0.87 ug/Kg	All samples in SDG K2407473
KWG0415421-9	10/8/04	Naphthalene	1.0 ug/Kg	All samples in SDG K2407595

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found in the associated method blanks with the following exceptions:

Associated SDG	Sample	Compound TIC (RT in minutes)	Reported Concentration	Modified Final Concentration
K2406296	LDW-B10b-S	Naphthalene	2.5 ug/Kg	5.0U ug/Kg
K2406580	LDW-B7a-S	Naphthalene	3.5 ug/Kg	4.7U ug/Kg
K2407012	LDW-B10a-S	Naphthalene	2.8 ug/Kg	5.0U ug/Kg
K2407595	LDW-B1b-S	Naphthalene	4.4 ug/Kg	5.0U ug/Kg

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits in SDGs K2406170, K2406580, K2407473, and K2407595 with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
K2407473	LDW-B5a-SMS/MSD (LDW-B5a-S)	Benzo(b)fluoranthene Indeno(1,2,3-cd)pyrene	133 (40-130) 134 (40-130)	- -	- -	J (all detects) J (all detects)	A

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits for SDGs K2406516, K2406170, K2406580, and K2407595 with the following exceptions:

Associated SDG	DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
K2406170	LDW-B1a-SDUP** (LDW-B1a-S**)	C1-Phenanthrene/Anthracene C2-Phenanthrene/Anthracene C3-Phenanthrene/Anthracene	57 (≤50) 61 (≤50) 88 (≤50)	J (all detects) J (all detects) J (all detects)	A
K2406580	LDW-B7a-SDUP (LDW-B7a-S)	Phenanthrene Anthracene Perylene	57 (≤50) 58 (≤50) 56 (≤50)	J (all detects) J (all detects) J (all detects)	A

*Indicates change as the result of report review.

Associated SDG	DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
K2407595	LDW-B1b-SDUP (LDW-B1b-S)	Fluoranthene	51 (≤50)	J (all detects)	A
		Benzo(b)fluoranthene	66 (≤50)	J (all detects)	
		Benzo(k)fluoranthene	60 (≤50)	J (all detects)	
		Benzo(e)pyrene	76 (≤50)	J (all detects)	
		Benzo(a)pyrene	81 (≤50)	J (all detects)	
		Indeno(1,2,3-cd)pyrene	98 (≤50)	J (all detects)	
		Benzo(g,h,i)perylene	102 (≤50)	J (all detects)	

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

Standard reference material were within QC limits.

No standard reference material analysis for Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Dibenzofuran, Acenaphthene, Fluorene, Anthracene, and Dibenz(a,h)anthracene were associated with the samples in SDGs K2406516, K2406170, K2406226, K2406296, K2406519, K2406580, K2407012, K2407476, K2407473, and K2407595.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits in SDG K2406170.

Internal standards data were not reviewed for Level II.

XI. Target Compound Identifications

All target compound identifications were within validation criteria.

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Criteria	Flag	A or P
K2406516	LDW-C8-S	Phenanthrene Fluoranthene Pyrene Benzo(b)fluoranthene Benzo(k)fluoranthene Benzo(a)anthracene Chrysene Benzo(a)pyrene Indeno(1,2,3-cd)pyrene Benzo(g,h,i)perylene	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	A
K2406170	LDW-B4a-S**	Phenanthrene Fluoranthene Pyrene C1-Fluoranthenes/Pyrenes Chrysene	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	A
K2406226	LDW-B3b-S	Fluoranthene Pyrene Benzo(a)anthracene C1-Fluoranthenes/Pyrenes Chrysene C1-Chrysene	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	A

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory for Level IV.

Tentatively identified compounds data were not reviewed for Level II.

XIV. System Performance

The system performance was acceptable.

System performance data were not reviewed for Level II.

XV. Overall Assessment

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Associated SDG	Sample	Compound	Flag	A or P
K2406516	LDW-C8-S	Phenanthrene Fluoranthene Pyrene Benzo(b)fluoranthene Benzo(k)fluoranthene Benzo(a)anthracene Chrysene Benzo(a)pyrene Indeno(1,2,3-cd)pyrene Benzo(g,h,i)perylene	R R R R R R R R R R	A
K2406516	LDW-C8-SDL	All TCL compounds except Phenanthrene Fluoranthene Pyrene Benzo(b)fluoranthene Benzo(k)fluoranthene Benzo(a)anthracene Chrysene Benzo(a)pyrene Indeno(1,2,3-cd)pyrene Benzo(g,h,i)perylene	R	A
K2406170	LDW-B4a-S**	Phenanthrene Fluoranthene Pyrene C1-Fluoranthenes/Pyrenes Chrysene	R R R R R	A
K2406170	LDW-B4a-SDL**	All TCL compounds except Phenanthrene Fluoranthene Pyrene C1-Fluoranthenes/Pyrenes Chrysene	R	A
K2406226	LDW-B3b-S	Fluoranthene Pyrene Benzo(a)anthracene C1-Fluoranthenes/Pyrenes Chrysene C1-Chrysene	R R R R R R	A
K2406226	LDW-B3b-SDL	All TCL compounds except Fluoranthene Pyrene Benzo(a)anthracene C1-Fluoranthenes/Pyrenes Chrysene C1-Chrysene	R	A

Data flags have been summarized at the end of the report.

*XVI. Field Duplicates

No field duplicates were identified in these SDGs.

XVII. Field Blanks

No field blanks were identified in these SDGs.

GC Chlorinated Pesticides by EPA SW 846 Method 8081A

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding
K2406170	LDW-B2a-S** LDW-B6a-S** LDW-B4a-S** LDW-B1a-S** LDW-B9b-S**	All TCL compounds	Cooler temperature was reported at 11°C upon receipt by the laboratory, however the laboratory indicated that the samples were then immediately stored frozen.

II. GC/ECD Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Initial calibration of multicomponent compounds was performed for the primary (quantitation) column as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for selected compounds.

A curve fit, based on the initial calibration, was established for quantitation for selected compounds. The coefficient of determination (r^2) was greater than or equal to 0.990 .

Retention time windows were evaluated and considered technically acceptable.

Initial calibration data were not reviewed for Level II.

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) of calibration factors in continuing standard mixtures were within the 15.0% QC limits with the following exceptions:

Associated SDG	Date	Standard	Column	Compound	%D	Associated Samples	Flag	A or P
K2406170	10/7/04	1006F046_049	DB-XLB	Methoxychlor	16	LDW-B9b-S**	J (all detects) UJ (all non-detects)	A
K2406170	10/7/04	1006F046_049	DB-35MS	Methoxychlor	16	LDW-B9b-S**	J (all detects) UJ (all non-detects)	A

The percent difference (%D) of the second source calibration standard were less than or equal to 15.0% for all compounds.

All of the continuing calibration RRF values were greater than or equal to 0.05 .

Retention times (RT) of all compounds in the calibration standards were within QC limits.

Continuing calibration data were not reviewed for Level II.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No chlorinated pesticide contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits with the following exceptions:

Associated SDG	Sample	Surrogate	%R (Limits)	Compound	Flag	A or P
K2406516	LDW-C10-S2	Decachlorobiphenyl	46 (50-150)	All TCL compounds	J (all detects) UJ (all non-detects)	A

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
K2406170	LDW-B6a-SMS/MSD** (LDW-B6a-S**)	gamma-Chlordane	-	-	57 (≤50)	J (all detects) UJ (all non-detects)	A
		Endosulfan I	44 (50-150)	-	-

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Pesticide Cleanup Checks

a. Florisil Cartridge Check

Although florisil cleanup was not required by the method, it was performed by the laboratory for EPA Level IV.

Florisil cartridge check data were not reviewed for Level II.

b. GPC Calibration

Although GPC cleanup was not required by the method, GPC cleanup was performed by the laboratory for EPA Level IV.

GPC cleanup data were not reviewed for Level II.

XI. Target Compound Identification

All target compound identifications were within validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Flag	A or P
K2406170	LDW-B2a-S** LDW-B6a-S** LDW-B4a-S** LDW-B1a-S** LDW-B9b-S**	All detected compounds	Due to the presence of PCBs, all detected results were qualified as presumptive and estimated.	NJ (all detects)	A

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and Reported CRQLs

All compound quantitation and CRQLs were within validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Criteria	Flag	A or P
K2406516	LDW-C10-S2	Endrin ketone 2,4'-DDD	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects)	A
K2406516	LDW-C10-S1	2,4'-DDD	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects)	A

K2407012	LDW-B8a-SDL	All TCL compounds except 2,4'-DDD alpha-BHC 4,4'-DDE 4,4'-DDT	R	A

Data flags are summarized at the end of this report.

*XIV. Field Duplicates

No field duplicates were identified in these SDGs.

XV. Field Blanks

No field blanks were identified in these SDGs.

Polychlorinated Biphenyls by EPA SW 846 Method 8082

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding
K2406170	LDW-B2a-S** LDW-B6a-S** LDW-B4a-S** LDW-B1a-S** LDW-B9b-S**	All TCL compounds	Cooler temperature was reported at 11°C upon receipt by the laboratory, however the laboratory indicated that the samples were then immediately stored frozen.

II. GC/ECD Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Initial calibration of multicomponent compounds was performed for the primary (quantitation) column as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

Retention time windows were evaluated and considered technically acceptable.

Initial calibration data were not reviewed for Level II.

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) of calibration factors in continuing standard mixtures were within the 15.0% QC limits.

The percent difference (%D) of the second source calibration standard were less than or equal to 15.0% for all compounds.

All of the continuing calibration RRF values were greater than or equal to 0.05 .

Retention times (RT) of all compounds in the calibration standards were within QC limits.

Continuing calibration data were not reviewed for Level II.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polychlorinated biphenyl contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits with the following exceptions:

Associated SDG	DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
K2407012	LDW-B5a-SDUP (LDW-B5a-S)	Aroclor-1260	51 (≤50)	J (all detects)	A

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Pesticide Cleanup Checks

a. Florisil Cartridge Check

Although florisil cleanup was not required by the method, it was performed by the laboratory for EPA Level IV.

Florisil cartridge check data were not reviewed for Level II.

b. GPC Calibration

Although GPC cleanup was not required by the method, GPC cleanup was performed by the laboratory for EPA Level IV.

Although sulfuric acid cleanup was not required by the method, sulfuric acid cleanup was performed by the laboratory for EPA Level IV.

Although mercury cleanup was not required by the method, mercury cleanup was performed by the laboratory for EPA Level IV for samples LDW-B2a-S**, LDW-B6a-S**, LDW-B4a-S**, and LDW-B9b-S** in SDG K2406170.

GPC cleanup data were not reviewed for Level II.

XI. Target Compound Identification

All target compound identifications were within validation criteria.

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and Reported CRQLs

The sample results for detected compounds from the two columns were within 40.0% relative percent differences (RPD) with the following exceptions:

Associated SDG	Sample	Compound	%RPD	Flag	A or P
K2406516	LDW-C7-S2	Aroclor-1260	42	J (all detects)	A
K2406516	LDW-C3-S1	Aroclor-1260	44	J (all detects)	A
K2406296	LDW-B8b-S	Aroclor-1242	49	J (all detects)	A
K2406296	LDW-B10b-S	Aroclor-1260	42	J (all detects)	A
K2407012	LDW-B5a-S	Aroclor-1260	42	J (all detects)	A
K2407012	LDW-B8a-S	Aroclor-1254	44	J (all detects)	A

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Overall Assessment of Data

Data flags are summarized at the end of this report.

***XIV. Field Duplicates**

No field duplicates were identified in these SDGs.

XV. Field Blanks

No field blanks were identified in these SDGs.

Metals by EPA SW 846 Methods 6010B/6020/7471A

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met.

Calibration data were not reviewed for Level II.

III. Blanks

Method blanks were reviewed for each matrix as applicable.

Data qualification by the initial, continuing and preparation blanks (ICB/CCB/PBs) was based on the maximum contaminant concentration in the ICB/CCB/PBs in the analysis of each analyte. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Associated SDG	Method Blank ID	Analyte	Maximum Concentration	Associated Samples
K2406516	PB (prep blank)	Lead	0.15 mg/Kg	LDW-C4-S LDW-C10-S2 LDW-C10-S1 LDW-C6-S LDW-C9-S LDW-C7-S1 LDW-C3-S2 LDW-C7-S2 LDW-C8-S LDW-C5-S LDW-C3-S1 LDW-C2-S1 LDW-C2-S2 LDW-C1-S
K2406170	ICB	Silver Thallium Molybdenum	0.014 ug/L 0.016 ug/L 0.069 ug/L	LDW-B2a-S** LDW-B6a-S** LDW-B4a-S** LDW-B1a-S** LDW-B9b-S**
K2406170	CCB	Silver Thallium Molybdenum	0.02 ug/L 0.008 ug/L 0.026 ug/L	LDW-B2a-S**

*Indicates change as the result of report review.

Associated SDG	Method Blank ID	Analyte	Maximum Concentration	Associated Samples
K2406170	CCB	Arsenic Lead Silver Thallium Molybdenum	0.13 ug/L 0.09 ug/L 0.023 ug/L 0.008 ug/L 0.057 ug/L	LDW-B6a-S** LDW-B4a-S** LDW-B1a-S** LDW-B9b-S**

Sample concentrations were compared to the maximum contaminant concentrations detected in the ICB/CCB/PBs. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated method blanks with the following exceptions:

Associated SDG	Sample	Analyte	Reported Concentration	Modified Final Concentration
K2406170	LDW-B1a-S**	Thallium Silver	0.032 mg/Kg 0.046 mg/Kg	0.032U mg/Kg 0.046U mg/Kg

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met in SDG K2406170.

The criteria for analysis were met in SDG K2406170.

ICP Interference check sample analysis data were not reviewed for Level II.

V. Matrix Spike Analysis

Matrix spike (MS) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Analyte	%R (Limits)	Flag	A or P
K2406516	LDW-C3-S2MS (LDW-C4-S LDW-C10-S2 LDW-C10-S1 LDW-C6-S LDW-C9-S LDW-C7-S1 LDW-C3-S2 LDW-C7-S2 LDW-C8-S LDW-C5-S LDW-C3-S1 LDW-C2-S1 LDW-C2-S2 LDW-C1-S)	Antimony	52 (70-130)	J (all detects) UJ (all non detects)	A

Associated SDG	Spike ID (Associated Samples)	Analyte	%R (Limits)	Flag	A or P
K2406516	LDW-C3-S2MS (LDW-C4-S LDW-C10-S2 LDW-C10-S1 LDW-C6-S LDW-C9-S LDW-C7-S1 LDW-C3-S2 LDW-C7-S2 LDW-C8-S LDW-C5-S LDW-C3-S1 LDW-C2-S1 LDW-C2-S2 LDW-C1-S)	Zinc	-9 (70-130)	J- (all detects) R (all non-detects)	A
K2406170 K2406226 K2406296 K2406580 K2407012	LDW-B2a-SMS** (LDW-B2a-S** LDW-B6a-S** LDW-B4a-S** LDW-B1a-S** LDW-B9b-S** LDW-B7b-S LDW-B3b-S LDW-B6b-S LDW-B8b-S LDW-B10b-S LDW-B7a-S LDW-B8a-S LDW-B10a-S)	Antimony	36 (70-130)	J (all detects) UJ (all non-detects)	A
K2406519	LDW-B9a-SMS (LDW-B9a-S LDW-B3a-S)	Antimony	34 (70-130)	J (all detects) UJ (all non-detects)	A
K2407012	LDW-B8a-SMS (LDW-B8a-S LDW-B10a-S)	Mercury	147 (55-137)	J+ (all detects)	A
K2407473 K2407595	LDW-B5a-SMS (LDW-B5a-S LDW-B1b-S LDW-B2b-S LDW-B4b-S LDW-B5b-S)	Antimony	51 (70-130)	J- (all detects) UJ (all non-detects)	A

Since zinc was detected in all the associated samples, this finding did not warrant rejection (R) of the data.

The laboratory has indicated that there were no matrix spike (MS) analyses specified for Mercury for all samples associated to SDGs K2406170, K2406226, K2406580, and K2407473.

VI. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits with the following exceptions:

Associated SDG	DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
K2406516	LDW-C3-S2DUP (LDW-C4-S LDW-C10-S2 LDW-C10-S1 LDW-C6-S LDW-C9-S LDW-C7-S1 LDW-C3-S2 LDW-C7-S2 LDW-C8-S LDW-C5-S LDW-C3-S1 LDW-C2-S1 LDW-C2-S2 LDW-C1-S)	Lead Molybdenum Zinc	31 (≤30) 31 (≤30) 67 (≤30)	- - -	J (all detects) UJ (all non-detects)	A
K2407473 K2407595	LDW-B5a-SDUP (LDW-B5a-S LDW-B1b-S LDW-B2b-S LDW-B4b-S LDW-B5b-S)	Arsenic Molybdenum Silver	34 (≤30) 81 (≤30) 39 (≤30)	- - -	J (all detects) UJ (all non-detects)	A

The laboratory has indicated that there were no duplicate (DUP) analyses specified for Mercury for all samples associated to SDGs K2406170, K2406226, K2406580, and K2407473.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

Standard reference material were within QC limits.

VIII. Internal Standards (ICP-MS)

All internal standard areas and retention times were within QC limits in SDG K2406170.

Internal standards data were not reviewed for Level II.

IX. Furnace Atomic Absorption QC

Graphite furnace atomic absorption was not utilized in these SDGs.

*X. ICP Serial Dilution

The ICP serial dilution analyses were reviewed for each matrix as applicable. The analysis criteria were met with the following exceptions:

Associated SDG	Diluted Sample	Analyte	%D (Limits)	Associated Samples	Flag	A or P
K2406170 K2406226 K2406296 K2406580 K2407012	LDW-B2a-S**L	Arsenic Lead	25 (≤10) 13 (≤10)	LDW-B2a-S** LDW-B6a-S** LDW-B4a-S** LDW-B1a-S** LDW-B9b-S** LDW-B7b-S LDW-B3b-S LDW-B6b-S LDW-B8b-S LDW-B10b-S LDW-B7a-S LDW-B8a-S LDW-B10a-S	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
K2406519	LDW-B9a-SL	Arsenic	23 (≤10)	LDW-B9a-S LDW-B3a-S	J (all detects) UJ (all non-detects)	A
K2407473 K2407595	LDW-B5a-SL	Arsenic	15 (≤10)	LDW-B5a-S LDW-B1b-S LDW-B2b-S LDW-B4b-S LDW-B5b-S	J (all detects) UJ (all non-detects)	A

XI. Sample Result Verification

All sample result verifications met validation criteria.

Sample result verification data were not reviewed for Level II.

XII. Overall Assessment of Data

Data flags have been summarized at the end of this report.

*XIII. Field Duplicates

No field duplicates were identified in these SDGs.

XIV. Field Blanks

No field blanks were identified in these SDGs.

Arsenic by EPA SW 846 Method 6020

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met.

Calibration data were not reviewed for Level II.

III. Blanks

Method blanks were reviewed for each matrix as applicable.

Data qualification by the initial, continuing and preparation blanks (ICB/CCB/PBs) was based on the maximum contaminant concentration in the ICB/CCB/PBs in the analysis of each analyte. No contaminant concentrations were found in the initial, continuing and preparation blanks.

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

ICP Interference check sample analysis data were not reviewed for Level II.

V. Matrix Spike Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits for SDG K2407469.

VI. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits for SDG K2407469.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

Standard reference material were within QC limits.

VIII. Internal Standards (ICP-MS)

All internal standard percent recoveries (%R) were within QC limits.

ICP-MS data were not reviewed for Level II.

IX. Furnace Atomic Absorption QC

Graphite furnace atomic absorption was not utilized in these SDGs.

X. ICP Serial Dilution

Although ICP serial dilution analysis was not required by the method, it was performed by the laboratory. The analysis criteria were met.

XI. Sample Result Verification

All sample result verifications met validation criteria.

Sample result verification data were not reviewed for Level II.

XII. Overall Assessment of Data

Data flags have been summarized at the end of this report.

XIII. Field Duplicates

No field duplicates were identified in these SDGs.

XIV. Field Blanks

No field blanks were identified in these SDGs.

Total Organic Carbon and Particle Size by PSEP Method

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

a. Initial Calibration

All criteria for the initial calibration of each method were met.

Initial calibration data were not reviewed for Level II.

b. Calibration Verification

Calibration verification frequency and analysis criteria were met for each method when applicable.

Continuing calibration data were not reviewed for Level II.

III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the method blanks.

Method blanks were not required for particle size.

IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

Matrix spike (MS) analyses were not required for particle size.

V. Duplicates/Triplicates

Duplicate (DUP) and triplicate (TRP) sample analyses were reviewed for each matrix as applicable. Relative percent differences (RPD) were within QC limits.

VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

Laboratory control samples were not required for particle size.

VII. Sample Result Verification

All sample result verifications met validation criteria.

Sample result verification data were not reviewed for Level II.

VIII. Overall Assessment of Data

Data flags are summarized at the end of this report.

*IX. Field Duplicates

No field duplicates were identified in these SDGs.

X. Field Blanks

No field blanks were identified in these SDGs.

GC Butyltins By Krone Method

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding
K2406170	LDW-B2a-S** LDW-B6a-S** LDW-B4a-S** LDW-B1a-S** LDW-B9b-S**	All TCL compounds	Cooler temperature was reported at 11°C upon receipt by the laboratory, however the laboratory indicated that the samples were then immediately stored frozen.

II. Calibration

a. Initial Calibration

Initial calibration of compounds was performed for the primary (quantitation) column and confirmation column as required by this method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

Retention time windows were evaluated and considered technically acceptable for samples on which EPA Level IV review was performed.

Initial calibration data were not reviewed for Level II.

b. Calibration Verification

Calibration verification was performed at the required frequencies.

The percent differences (%D) of calibration factors in continuing standard mixtures were within the 25.0% QC limits.

Retention times (RT) of all compounds in the calibration standards were within QC limits for samples on which EPA Level IV review was performed.

Continuing calibration data were not reviewed for Level II.

III. Blanks

Method blanks were reviewed for each matrix as applicable. No butyltin contaminants were found in the method blanks.

IV. Accuracy and Precision Data

a. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

b. Matrix Spike/(Matrix Spike) Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
K2406516	LDW-C9-SMS/MSD (LDW-C9-S)	n-Butyltin	13 (20-130)	-	-	J (all detects) UJ (all non-detects)	A
K2406170	LDW-B1a-SMS/MSD** (LDW-B1a-S**)	n-Butyltin	4 (20-130)	-	128 (≤50)	J (all detects) UJ (all non-detects)	A
K2406580	LDW-D7a-SMS/MSD (LDW-B7a-S)	n Butyltin	12 (20-130)	-	-	J (all detects) UJ (all non-detects)	A

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

c. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

Standard reference material were within QC limits.

No standard reference material was analyzed for Tetra-n-butyltin.

V. Target Compound Identification

All target compound identifications were within validation criteria for samples on which EPA Level IV review was performed.

Target compound identifications data were not reviewed for Level II.

VI. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Criteria	Flag	A or P
K2406226	LDW-B3b-S	Tri-n-butyltin Di-n-butyltin n-Butyltin	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects) J (all detects)	A
K2407595	LDW-B1b-S	Tri-n-butyltin Di-n-butyltin	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects)	A
K2407595	LDW-B1b-SDL	Tri-n-butyltin	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects)	A

Compound quantitation and CRQLs data were not reviewed for Level II.

VII. System Performance

The system performance was acceptable.

System performance data were not reviewed for Level II.

VIII. Overall Assessment of Data

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Associated SDG	Sample	Compound	Flag	A or P
K2406226	LDW-B3b-S	All TCL compounds	R	A
K2407595	LDW-B1b-S	Tri-n-butyltin Di-n-butyltin n-Butyltin	R R R	A

*Indicates change as the result of report review.

Associated SDG	Sample	Compound	Flag	A or P
K2407595	LDW-B1b-SDL	Tetra-n-butyltin	R	A

Data flags are summarized at the end of this report.

***IX. Field Duplicates**

No field duplicates were identified in these SDGs.

X. Field Blanks

No field blanks were identified in these SDGs.

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS Instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?	✓			
Did the initial calibration meet the curve fit acceptance criteria?	✓			
Were all percent relative standard deviations (%RSD) $\leq$ 30% and relative response factors (RRF) $\geq$ 0.05?	✓			
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			ICV
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Were all percent differences (%D) $\leq$ 25% and relative response factors (RRF) $\geq$ 0.05?		✓		
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
VI. Surrogate spikes				
Were all surrogate %R within QC limits?		✓		
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			DUP
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			

Validation Area	Yes	No	NA	Findings/Comments
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?		✓		
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?		✓		
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Internal standards				
Were internal standard area counts within -50% or +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds from the associated calibration standard?	✓			
XI. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XII. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Tentatively identified compounds (TICs)				
Were the major ions (> 10 percent relative intensity) in the reference spectrum evaluated in sample spectrum?			✓	
Were relative intensities of the major ions within ± 20% between the sample and the reference spectra?			✓	
Did the raw data indicate that the laboratory performed a library search for all required peaks in the chromatograms (samples and blanks)?		✓		
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			

Validation Area	Yes	No	NA	Findings/Comments
XVI. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target compounds were detected in the field duplicates.			✓	
XVII. Field blanks				
Field blanks were identified in this SDG.		✓		
Target compounds were detected in the field blanks.			✓

VALIDATION FINDINGS WORKSHEET
Initial Calibration Calculation Verification

Reviewer: [illegible]
2nd Reviewer: [illegible]

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$RRF = (A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
$\%RSD = 100 * (S/X)$

A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard
S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported RRF (1000 std)	Recalculated RRF (1000 std)	Reported Average RRF (Initial)	Recalculated Average RRF (Initial)	Reported %RSD	Recalculated %RSD

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

$$\text{Concentration} = \frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

V_i = Volume of extract injected in microliters (ul)

V_t = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 1 , A :

$$\text{Conc.} = \frac{(48830)(1000)(2)(1)(\quad)}{(70982)(2.01)(40.0)(1)(0.50)}$$

VALIDATION FINDINGS CHECKLIST

Page: 1 of 3
Reviewer: 9
2nd Reviewer: K

Method: Semivolatiles (EPA SW 846 Method 8270C)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?			✓	
Were all percent relative standard deviations (%RSD) $\leq$ 30% and relative response factors (RRF) $\geq$ 0.05?	✓			
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Were all percent differences (%D) $\leq$ 25% and relative response factors (RRF) $\geq$ 0.05?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
VI. Surrogate spikes				
Were all surrogate %R within QC limits?	✓			
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			

Validation Area	Yes	No	NA	Findings/Comments
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?		✓		
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Internal standards				
Were internal standard area counts within -50% or +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds from the associated calibration standard?	✓			
XI. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XII. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Tentatively identified compounds (TICs)				
Were the major ions (> 10 percent relative intensity) in the reference spectrum evaluated in sample spectrum?			✓	
Were relative intensities of the major ions within ± 20% between the sample and the reference spectra?			✓	
Did the raw data indicate that the laboratory performed a library search for all required peaks in the chromatograms (samples and blanks)?		✓		
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			

Validation Area	Yes	No	NA	Findings/Comments
XVI. Field duplicates				
Field duplicate pairs were identified in this SDG.			✓	
Target compounds were detected in the field duplicates.			✓	
XVII. Field blanks				
Field blanks were identified in this SDG.			✓	
Target compounds were detected in the field blanks.			✓

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

RRF = $(A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound,
C_x = Concentration of compound,
S = Standard deviation of the RRFs,

A_{is} = Area of associated internal standard
C_{is} = Concentration of internal standard
X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported RRF (1000 std)	Recalculated RRF (1000 std)	Reported Average RRF (Initial)	Recalculated Average RRF (Initial)	Reported %RSD	Recalculated %RSD

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
RRF = $(A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

$$\text{Concentration} = \frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

V_i = Volume of extract injected in microliters (ul)

V_t = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 1 , 5 :

Conc. = $\frac{(31843)(200)(10)(1)(\quad)}{(388577)(1.25)(20.03)(1)(0.50)}$

= 13.1 ug/kg

Method: Pesticides/PCBs (EPA SW 846 Method 8081/8082)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.		✓		
II. GC/ECD Instrument performance check				
Was the instrument performance found to be acceptable?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Was a linear fit used for evaluation? If yes, were all percent relative standard deviations (%RSD) $\leq$ 20%?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?	✓			
Did the initial calibration meet the curve fit acceptance criteria?	✓			
Were the RT windows properly established?	✓			
Were the required standard concentrations analyzed in the initial calibration?	✓			
IV. Continuing calibration				
What type of continuing calibration calculation was performed? ____%D or ____%R	✓			
Were Evaluation mix standards analyzed prior to the initial calibration and sample analysis?	✓			
Were endrin and 4,4'-DDT breakdowns $\leq$ 15%.0 for individual breakdown in the Evaluation mix standards?	✓			
Was a continuing calibration analyzed daily?	✓			
Were all percent differences (%D) $\leq$ 15%.0 or percent recovieries 85-115%?		✓		
Were all the retention times within the acceptance windows?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Were extract cleanup blanks analyzed with every batch requiring clean-up?	✓			GPC
Was there contamination in the method blanks or clean-up blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within the QC limits?	✓			
If the percent recovery (%R) of one or more surrogates was outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓

Initial Calibration Calculation Verification

Page: 1 of 1
Reviewer:
2nd Reviewer:

METHOD: GC / HPLC

The calibration Factor (CF), average CF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

CF = A/C
average CF = sum of the CF/number of standards
%RSD = 100 * (S/X)

A = Area of compound,
C = Concentration of compound,
S = Standard deviation of the CF
X = Mean of the CFs

#	Standard ID	Calibration Date	Compound	Reported CF (50 std)	Recalculated CF (50 std)	Reported Average CF (initial)	Recalculated Average CF (initial)	Reported %RSD	Recalculated %RSD

METHOD: GC ✓ HPLC ____

The percent difference (%D) of the initial calibration average Calibration Factors (CF) and the continuing calibration CF were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. CF - CF)/ave. CF
CF = A/C

Where: ave. CF = initial calibration average CF
CF = continuing calibration CF
A = Area of compound
C = Concentration of compound

#	Standard ID	Calibration Date	Compound	Average CF(ical)/ CCV Conc.	Reported CF/Conc. CCV	Recalculated CF/Conc. CCV	Reported %D	Recalculated %D

METHOD: GC Pesticides/PCBs (EPA SW 846 Method 8081/8082)

The percent recoveries (%R) and Relative Percent difference (RPD) of the matrix spike and matrix spike duplicate were recalculated for the compounds identified below using the following calculation:

% Recovery = 100* (SSC-SC)/SA

Where: SSC = Spiked sample concentration
SA = Spike added
SC = Concentration

RPD = I MS - MSD I * 2/(MS + MSD)

MS = Matrix spike percent recovery
MSD = Matrix spike duplicate percent recovery

MS/MSD samples: 6 + 7

Compound	Spike Added (ug/kg)		Sample Concentration (ug/kg)	Spiked Sample Concentration (ug/kg)		Matrix Spike Percent Recovery		Matrix Spike Duplicate Percent Recovery		MS/MSD RPD

2nd Reviewer: [illegible]

Method: Pesticides/PCBs (EPA SW 846 Method 8081/8082)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.		✓		
II. GC/ECD Instrument performance check				
Was the instrument performance found to be acceptable?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Was a linear fit used for evaluation? If yes, were all percent relative standard deviations (%RSD) $\leq$ 20%?		✓		
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?			✓	
Did the initial calibration meet the curve fit acceptance criteria?	✓			
Were the RT windows properly established?	✓			
Were the required standard concentrations analyzed in the initial calibration?	✓			
IV. Continuing calibration				
What type of continuing calibration calculation was performed? ____%D or ____%R	✓			
Were Evaluation mix standards analyzed prior to the initial calibration and sample analysis?			✓	
Were endrin and 4,4'-DDT breakdowns $\leq$ 15%.0 for individual breakdown in the Evaluation mix standards?			✓	
Was a continuing calibration analyzed daily?	✓			
Were all percent differences (%D) $\leq$ 15%.0 or percent recovieries 85-115%?	✓			
Were all the retention times within the acceptance windows?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Were extract cleanup blanks analyzed with every batch requiring clean-up?	✓			
Was there contamination in the method blanks or clean-up blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within the QC limits?	✓			
If the percent recovery (%R) of one or more surrogates was outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓

Validation Area	Yes	No	NA	Findings/Comments
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?	✓			
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?			✓	
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Target compound identification				
Were the retention times of reported detects within the RT windows?	✓			
XI. Compound quantitation/CRQLs				
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions, dry weight factors, and clean-up activities applicable to level IV validation?	✓			
XII. System performance				
System performance was found to be acceptable.	✓			
XIII. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XIV. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target compounds were detected in the field duplicates.			✓	
XV. Field blanks				
Field blanks were identified in this SDG.		✓		
Target compounds were detected in the field blanks.			✓

METHOD: GC / HPLC

The calibration Factor (CF), average CF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

CF = A/C
average CF = sum of the CF/number of standards
%RSD = 100 * (S/X)

A = Area of compound,
C = Concentration of compound,
S = Standard deviation of the CF
X = Mean of the CFs

#	Standard ID	Calibration Date	Compound	Reported CF (1000 std)	Recalculated CF (1000 std)	Reported Average CF (initial)	Recalculated Average CF (initial)	Reported %RSD	Recalculated %RSD
1	CAL3870 DB-35MS	10/01/04	1260-1	154	154	159	159	16.5	16.5
2	DB-XLB	10/01/04	↓	191	191	200	200	16.1	16.1
3

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

1260-1 = $\frac{95075}{159}\ \frac{ug}{L} \times \frac{4ml}{40.07g} \times \frac{1kg}{1000ml} \times \frac{1000g}{1kg}$

= 59.69 ug/kg

1260-2 = $\frac{73665}{215} \times 0.09982531 = 34.20$

-3 = $\frac{93164}{248} \times 0.09982531 = 37.50$

-4 = $\frac{116600}{242} \times 0.09982531 = 48.098$

-5 = $\frac{91239}{325} \times 0.09982531 = 28.02$

Example:

Sample I.D. #1 1260

final Conc. = (39.90 FT 41.50) / (0.50)

= ~~79.80~~ ug/kg
83

aroclor 1260 = $\frac{1+2+3+4+5}{5}$

= $\frac{59.69+34.20+37.50+48.098+28.02}{5}$

= ~~39.90~~ 41.50

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds within 10% of the reported results?

Concentration= $\frac{(A)(Fv)(Df)}{(RF)(Vs \text{ or } Ws)(\%S/100)}$

A= Area or height of the compound to be measured
Fv= Final Volume of extract
Df= Dilution Factor
RF= Average response factor of the compound In the initial calibration
Vs= Initial volume of the sample
Ws= Initial weight of the sample
%S= Percent Solid

Example:

Sample ID. #1 Compound Name 1254

Final Concentration = $\frac{40}{0.5}$

= 8 ug/kg

#	Sample ID	Compound	Reported Concentrations ( )	Recalculated Results Concentrations ( )	Qualifications
	1254-1 = $\frac{845}{21085}$	09 x 1000 x $\frac{4ml}{40.07}$	= 40 ug/kg		
	1254 = $\frac{1+2+3+4+5}{5}$	=	$\frac{40+49+34+36+41}{5}$ = 40		
	1254 std = 1000 ppb

Method: Metals (EPA SW 846 Method 6010/7000/6020) 4

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% (80-120% for mercury and 85-115% for cyanide) QC limits?	✓			
Were all initial calibration correlation coefficients ≥ 0.995?	✓			
Was a midrange cyanide standard distilled?			✓	
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
IV. ICP Interference Check Sample				
Were ICP interference check samples performed daily?	✓			
Were the AB solution percent recoveries (%R) with the 80-120% QC limits?	✓			
IV. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.	✓			
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of +/- RL(+/-2X RL for soil) was used for samples that were ≤ 5X the RL, including when only one of the duplicate sample values were ≤ 5X the RL.	✓			
V. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% QC limits for water samples and laboratory established QC limits for soils?	✓			
VI. Furnace Atomic Absorption QC				
If MSA was performed, was the correlation coefficients ≥ 0.995?			✓	
Do all applicable analysies have duplicate injections?			✓

VALIDATION FINDINGS WORKSHEET
Initial and Continuing Calibration Calculation Verification

Page: 1 of 1
Reviewer: MM
2nd Reviewer:

METHOD: Trace Metals (EPA SW 846 Method 6010/7000/6020

An initial and continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found x 100 / True

Where, Found = concentration (in ug/L) of each analyte measured in the analysis of the ICV or CCV solution
True = concentration (in ug/L) of each analyte in the ICV or CCV source

Standard ID	Type of Analysis	Element	Found (ug/L)	True (ug/L)	Recalculated %R	Reported %R	Acceptable (Y/N)
ICV	ICP/MS (Initial calibration)	As	26.84	25.0	107	107	Y
	GFAA (Initial calibration)						
	CVAA (Initial calibration)						
CCV	ICP/MS (Continuing calibration)	As	24.49	25.0	98	98	Y
	GFAA (Continuing calibration)						
	CVAA (Continuing calibration)						
	Cyanide (Initial calibration)						
	Cyanide (Continuing calibation)						

Comments: Refer to Calibration Verification findings worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

VALIDATION FINDINGS WORKSHEET
Level IV Recalculation Worksheet

Reviewer: MM
2nd Reviewer: [illegible]

METHOD: Trace Metals (EPA SW 846 Method 6010/7000/6020

Percent recoveries (%R) for an ICP interference check sample, a laboratory control sample and a matrix spike sample were recaluculated using the following formula:

$$\%R = \frac{Found}{True} \times 100$$

Where, Found = Concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = Concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

$$RPD = \frac{|S-D|}{(S+D)/2} \times 100$$

Where, S = Original sample concentration
D = Duplicate sample concentration

An ICP serial dilution percent difference (%D) was recalculated using the following formula:

$$\%D = \frac{|I-SDR|}{I} \times 100$$

Where, I = Initial Sample Result (mg/L)
SDR = Serial Dilution Result (mg/L) (Instrument Reading x 5)

Sample ID	Type of Analysis	Element	Found / S / I (units)	True / D / SDR (units)	Recalculated %R / RPD / %D	Reported %R / RPD / %D	Acceptable (Y/N)
ZYSKB	ICP interference check	Ba	20.43	20	102	102	Y
LCS	Leboratory control sample		206	187	110	110	
SP-C-S2	Matrix spike		(SSR-SR) 106	105	101	101	
↓	Duplicate		1.30	1.38	6	6	
↓	ICP serial dilution	↓	2.49	2.62	5	5	↓

Comments: Refer to appropriate worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

(Y) N N/A Have results been reported and calculated correctly?
(Y) N N/A Are results within the calibrated range of the instruments and within the linear range of the ICP?
(Y) N N/A Are all detection limits below the CRDL?

Detected analyte results for 1 were recalculated and verified using the following equation:

Concentration = $\frac{(RD)(FV)(Dil)}{(In.\ Vol.)(\%S)}$

RD = Raw data concentration
FV = Final volume (ml)
In. Vol. = Initial volume (ml) or weight (G)
Dil = Dilution factor
%S = Decimal percent solids

Recalculation:

$$As = \frac{7.963\ ug/L \times 0.1\ L \times 5}{0.645 \times 1.41\ g} = 4.38\ ug/g$$

Sample ID	Analyte	Reported Concentration (mg/kg)	Calculated Concentration (ug/kg)	Acceptable (Y/N)
1	As	4.38	4.38	Y

Method: Metals (EPA SW 846 Method 6010/7000/6020)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% (80-120% for mercury and 85-115% for cyanide) QC limits?	✓			
Were all initial calibration correlation coefficients ≥ 0.995?	✓			
Was a midrange cyanide standard distilled?			✓	
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
IV. ICP Interference Check Sample				
Were ICP interference check samples performed daily?	✓			
Were the AB solution percent recoveries (%R) with the 80-120% QC limits?	✓			
IV. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.		✓		
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of +/- RL(+/-2X RL for soil) was used for samples that were ≤ 5X the RL, including when only one of the duplicate sample values were ≤ 5X the RL.	✓			
V. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% QC limits for water samples and laboratory established QC limits for soils?	✓			
VI. Furnace Atomic Absorption QC				
If MSA was performed, was the correlation coefficients ≥ 0.995?			✓	
Do all applicable analysies have duplicate injections?			✓

2nd Reviewer: A

Validation Area	Yes	No	NA	Findings/Comments
For sample concentrations > RL, are applicable duplicate injection RSD values < 20%?			✓	
Were analytical spike recoveries within the 85-115% QC limits?			✓	
VII. ICP Serial Dilution				
Was an ICP serial dilution analyzed if analyte concentrations were > 50X the IDL?	✓			
Were all percent differences (%Ds) ≤ 10%?		✓		
Was there evidence of negative interference? If yes, professional judgement will be used to qualify the data.		✓		
VIII. Internal Standards (EPA SW 846 Method 6020)				
Were all the percent recoveries (%R) within the 30-120% of the intensity of the internal standard in the associated initial calibration?	✓			
If the %Rs were outside the criteria, was a reanalysis performed?			✓	
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?			✓	
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Sample Result Verification				
Were RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XI. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XII. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target analytes were detected in the field duplicates.			✓	
XIII. Field blanks				
Field blanks were identified in this SDG.		✓		
Target analytes were detected in the field blanks.			✓

Level IV Recalculation Worksheet

Page: 1 of 1
Reviewer: MM
2nd Reviewer: [illegible]

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Percent recoveries (%R) for an ICP interference check sample, a laboratory control sample and a matrix spike sample were recaluculated using the following formula:

$$\%R = \frac{Found}{True} \times 100$$

Where, Found = Concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = Concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

$$RPD = \frac{|S-D|}{(S+D)/2} \times 100$$

Where, S = Original sample concentration
D = Duplicate sample concentration

An ICP serial dilution percent difference (%D) was recalculated using the following formula:

$$\%D = \frac{|I-SDR|}{I} \times 100$$

Where, I = Initial Sample Result (mg/L)
SDR = Serial Dilution Result (mg/L) (Instrument Reading x 5)

Sample ID	Type of Analysis	Element	Found / S / I (units)	True / D / SDR (units)	Recalculated %R / RPD / %D	Reported %R / RPD / %D	Acceptable (Y/N)

ELEMENTS.4

LDC #: 1269/B4
SDG #: K2406276

VALIDATION FINDINGS WORKSHEET
Matrix Spike Analysis

Reviewer: MY
2nd Reviewer:

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a matrix spike analyzed for each matrix in this SDG?

Y N N/A Were matrix spike percent recoveries (%R) within the control limits of 75-125? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.

Y N N/A Was a post digestion spike analyzed for ICP elements that did not meet the required criteria for matrix spike recovery?

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

#	Matrix Spike ID	Matrix	Analyte	%R	Associated Samples	Qualifications
1	LDW-B2a-SMS (SDG K2406276)	Sediment	Sb	36 (70-130)	All	J/UJ/A (post spike 42%)
		↓				
2	MS/Dup (from client)	↓	Hg ↓		All	Test.

ICP Serial Dilution

Reviewer: MH
2nd Reviewer:

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A If analyte concentrations were > 50X the IDL, was an ICP serial dilution analyzed?
Y N N/A Were ICP serial dilution percent differences (%D) ≤10%?
Y N N/A Is there evidence of negative interference? If yes, professional judgement will be used to qualify the data.

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

VALIDATION FINDINGS WORKSHEET
Matrix Spike Analysis

Page: 1 of 1
Reviewer: MH
2nd Reviewer: A

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

(Y) N N/A Was a matrix spike analyzed for each matrix in this SDG?

(Y) N N/A Were matrix spike percent recoveries (%R) within the control limits of 75-125? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken. Dapp limit

Y (N) N/A Was a post digestion spike analyzed for ICP elements that did not meet the required criteria for matrix spike recovery?

LEVEL IV ONLY:

Y N (N/A) Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

#	Matrix Spike ID	Matrix	Analyte	%R	Associated Samples	Qualifications
1	1	Sediment	Sb	51 (70-130)	All	J- / Hj / A (post spike was not performed on client sample)
2	No MS/Dup (non-client)	Sediment	Hg		All	& Text

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Please see qualificaticns below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a duplicate sample analyzed for each matrix in this SDG?

Y N N/A Were all duplicate sample relative percent differences (RPD) ≤ 20% for water samples and ≤ 35% for soil samples? If no, see qualifications below. A control limit of ±R.L. (±2X R.L. for soil) was used for sample values that were <5X the R.L., including the case when only one of the duplicate sample values was <5X R.L.. If field blanks were used for laboratory duplicates, note in the Overall Assessment.

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

VALIDATION FINDINGS CHECKLIST

Page: 1 of 2
Reviewer: MH
2nd Reviewer:

Method: Inorganics (EPA Method PSEP)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.				
Cooler temperature criteria was met.				
II. Calibration				
Were all instruments calibrated daily, each set-up time?				
Were the proper number of standards used?				
Were all initial calibration correlation coefficients ≥ 0.995?				
Were all initial and continuing calibration verification %Rs within the 90-110% QC limits?				
Were titrant checks performed as required?				
Were balance checks performed as required?				
Were all initial and continuing calibration verification %Rs within the 90-110% QC limits?	✓			
III. Blanks				
Was a method blank associated with every sample in this SDG?				
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.				
IV. Matrix spike/Matrix spike duplicates and Duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in thie SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.				
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.				
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of ≤ CRDL (≤ 2X CRDL for soil) was used for samples that were ≤ 5X the CRDL, including when only one of the duplicate sample values were ≤ 5X the CRDL.				
V. Laboratory control samples				
Was an LCS anaylzed for this SDG?				
Was an LCS analyzed per extraction batch?				
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% (85-115% for Method 300.0) QC limits?				
VI. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?				
Were the performance evaluation (PE) samples within the acceptance limits?

VALIDATION FINDINGS WORKSHEET
Initial and Continuing Calibration Calculation Verification

Page: 1 of 1
Reviewer: MH
2nd Reviewer: A

METHOD: Inorganics, Method 851-P

The correlation coefficient (r) for the calibration of _____ was recalculated. Calibration date: _____

An initial or continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

$$\%R = \frac{\text{Found}}{\text{True}} \times 100$$

Where, Found = concentration of each analyte measured in the analysis of the ICV or CCV solution
True = concentration of each analyte in the ICV or CCV source

Type of Analysis	Analyte		_____(units)	_____ (units)	Recalculated r or %R	Reported r or %R	Acceptable (Y/N)
Initial calibration		Blank					
Calibration verification		Standard 1					
		Standard 2					
		Standard 3

SDG #: KX4GL1

VALIDATION FINDINGS WORKSHEET
Level IV Recalculation Worksheet

Reviewer: MH
2nd Reviewer:

METHOD: Inorganics, Method ICP

Percent recoveries (%R) for a laboratory control sample and a matrix spike sample were recalculated using the following formula:

$\%R = \frac{Found}{True} \times 100$ Where, Found = concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

$RPD = \frac{|S-D|}{(S+D)/2} \times 100$ Where, S = Original sample concentration
D = Duplicate sample concentration

Sample ID	Type of Analysis	Element	Found / S (units)	True / D (units)	Recalculated %R / RPD	Reported %R / RPD	Acceptable (Y/N)
LCS	Laboratory control sample	TOC	0.81	0.75	108	108	Y
KX4GBM6	Matrix spike sample	TOC	(SSR-SR) 3.28	3.48	94	94	↓
KX4GBX6-01	Duplicate sample	TOC	1.32	1.26	5	5	↓

Comments: Refer to appropriate worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

METHOD: Inorganics, Method PSEP

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Have results been reported and calculated correctly?
Y N N/A Are results within the calibrated range of the instruments?
Y N N/A Are all detection limits below the CRQL?

Compound (analyte) results for _____ reported with a positive detect were recalculated and verified using the following equation:

Concentration =

$$\%\,TOC = \frac{(\text{Instr Reading}) \times (0.1)}{\text{mg Sample Injected}}$$

Recalculation:

$$\% = \frac{(579.7 - 7.8) \times 0.1}{29.1}$$

$$= 1.9653\,\%$$

#	Sample ID	Analyte	Reported Concentration ( )	Calculated Concentration ( )	Acceptable (Y/N)

VALIDATION FINDINGS CHECKLIST

Reviewer: BZ
2nd Reviewer: [illegible]

Method: ✓ GC _____ HPLC

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Was a linear fit used for evaluation? If yes, were all percent relative standard deviations (%RSD) ≤ 20%?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?			✓	
Were the RT windows properly established?	✓			
IV. Continuing calibration				
What type of continuing calibration calculation was performed? ____%D or %R	✓			
Was a continuing calibration analyzed daily?	✓			
Were all percent differences (%D) ≤ ~~15%~~ 25.0 or percent recoveries ~~85-115%~~ 75-125?	✓			
Were all the retention times within the acceptance windows?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within the QC limits?	✓			
If the percent recovery (%R) of one or more surrogates was outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?		✓		
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓

VALIDATION FINDINGS WORKSHEET

Laboratory Control Sample/Laboratory Control Sample Duplicates Results Verification

Reviewer: [illegible]
2nd Reviewer: [illegible]

METHOD: ~~GC~~ HPLC

The percent recoveries (%R) and relative percent differences (RPD) of the laboratory control sample and laboratory control sample duplicate were recalculated for the compounds identified below using the following calculation:

%Recovery = 100 * (SSC - SC)/SA

Where SSC = Spiked sample concentration; SA = Spike added; SC = Sample concentration

RPD =(({SSCLCS - SSCLCSD} * 2) / (SSCLCS + SSCLCSD))*100

LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample duplicate

LCS/LCSD samples: KWG0414228-4

Compound	Spike Added (ug/kg)		Sample Conc. (ug/kg)	Spike Sample Concentration (ug/kg)		LCS Percent Recovery		LCSD Percent Recovery		LCS/LCSD RPD

METHOD: ___ GC ___ HPLC

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds within 10% of the reported results?

Concentration= $\frac{(A)(Fv)(Df)}{(RF)(Vs \text{ or } Ws)(\%S/100)}$

A= Area or height of the compound to be measured
Fv= Final Volume of extract
Df= Dilution Factor
RF= Average response factor of the compound in the initial calibration
Vs= Initial volume of the sample
Ws= Initial weight of the sample
%S= Percent Solid

Example:

Sample ID. #1 Compound Name Tri-n-butyltin

Concentration = $\frac{4576849 \text{ ug} \times 4 \text{ ml} \times 1 \quad \times 1000}{8290 \text{ ml} \quad L \quad 20.11 \text{ g} \quad 0.50}$

= 22 ug/kg

SUBJECT: Lower Duwamish Waterway Group Tissue Sample Data Validation

Dear Ms. McGroddy,

Enclosed is our EPA Level IV data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The analyses were performed by Columbia Analytical Services, Inc. Chlorinated Pesticide results were confirmed by GC/MS EPA SW846 Method 8270C. Samples are referenced under the following Sample Delivery Groups: K2406932 and K2407452. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed and the Sample Validation Table (Attachment 2) for the sample identifications and analyses.

Please feel free to contact us if you have any questions.

Sincerely,

Stella S. Cuenco
Project Manager/Senior Chemist

ADDENDUM TO THE
CHEMICAL DATA QUALITY REVIEW FOR TISSUE SAMPLES

Lower Duwamish Waterway Group
LDC# 13012

This report details the findings of an EPA Level IV data validation review of Analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The analyses were performed by Columbia Analytical Services, Inc. Chlorinated Pesticide results were confirmed by GC/MS EPA SW 846 Method 8270C. Samples are referenced under the following Sample Delivery Groups: K2406932 and K2407452. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed and the Sample Validation Table (Attachment 2) for the sample identifications and analyses.

The QC guidelines used for data qualification are those specified in the National Functional Guidelines for Organic Data Review (October 1999). Specific QC criteria used follows the Final Benthic Invertebrate Sampling of the Lower Duwamish Waterway Quality Assurance Project Plan (July 30, 2004). Where specific guidance is not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The following items were evaluated during the review:

- Holding Times
- Instrument Calibration
- Blanks
- Internal Standards
- Target Compound Identifications
- Compound Quantitation and CRQLs
- System Performance

Only issues which require comment or action are discussed in this report. Data deficiencies are arranged by method. Potential effects of data anomalies have been described where possible.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

Overall Data Assessment

Holding time exceedances have warranted the qualification of all samples in this data set.

Based upon the information reviewed, the overall data quality is considered acceptable with the noted limitations.

GC/MS Chlorinated Pesticides by EPA SW 846 Method 8270C

I. Technical Holding Times

All technical holding time requirements were met with the following exceptions:

Associated SDG	Sample	Compound	Total Days From Sample Extraction Until Analysis	Required Holding Time (in Days) From Sample Extraction Until Analysis	Flag	A or P
K2406932	LDW-B8a-T	All TCL compounds	89	40	J (all detects) UJ (all non-detects)	A
K2407452	LDW-B5a-T	All TCL compounds	73	40	J (all detects) UJ (all non-detects)	A

Although the analysis holding time was grossly exceeded (>2X) for sample LDW-B8a-T, results were qualified as estimated "J/UJ". GC/MS confirmation analyses were performed for qualitative identification only.

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all target compounds were within validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 25.0% .

All of the continuing calibration RRF values were within validation criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No chlorinated pesticide contaminants were found in the method blanks performed in the pesticide analyses (Method 8081A) .

VI. Internal Standards

All internal standard areas and retention times were within QC limits.

VII. Target Compound Identification

All target compound identifications were within validation criteria.

VIII. Compound Quantitation and Reported CRQLs

All compound quantitation and CRQLs were within validation criteria.

IX. System Performance

The system performance was acceptable.

Concentration = $\frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$

A_x	=	Area of the characteristic ion (EICP) for the compound to be measured
A_{is}	=	Area of the characteristic ion (EICP) for the specific internal standard
I_s	=	Amount of internal standard added in nanograms (ng)
V_o	=	Volume or weight of sample extract in milliliters (ml) or grams (g).
V_i	=	Volume of extract injected in microliters (ul)
V_t	=	Volume of the concentrated extract in microliters (ul)
Df	=	Dilution Factor.
%S	=	Percent solids, applicable to soil and solid matrices only.
2.0	=	Factor of 2 to account for GPC cleanup

Example:

Sample I.D. #1, 4'-DDD

Conc. = $\frac{(28189)(2500)(\quad)(\quad)(\quad)(\quad)}{(1529424)(1.3810)(\quad)(\quad)(\quad)}$

= 33.39 ng/L × $\frac{4\,ml}{1.4\,l}$

= 95 ug/kg

SUBJECT: Lower Duwamish Waterway Group Sediment Sample Data Validation

Dear Ms. McGroddy,

Enclosed is our EPA Level IV data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The analyses were performed by Columbia Analytical Services, Inc. Chlorinated Pesticide results were confirmed by GC/MS EPA SW846 Method 8270C. Samples are referenced under the following Sample Delivery Groups: K2406516, K2407012, and K2407473. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed and the Sample Validation Table (Attachment 2) for the sample identifications and analyses.

Please feel free to contact us if you have any questions.

Sincerely,

Stella S. Cuenco
Project Manager/Senior Chemist

ADDENDUM TO THE
CHEMICAL DATA QUALITY REVIEW FOR SEDIMENT SAMPLES

Lower Duwamish Waterway Group
LDC# 13011

This report details the findings of an EPA Level IV data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The analyses were performed by Columbia Analytical Services, Inc. Chlorinated Pesticide results were confirmed by GC/MS EPA SW 846 Method 8270C. Samples are referenced under the following Sample Delivery Groups: K2406516, K2407012, and K2407473. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed and the Sample Validation Table (Attachment 2) for the sample identifications and analyses.

The QC guidelines used for data qualification are those specified in the National Functional Guidelines for Organic Data Review (October 1999). Specific QC criteria used follows the Final Benthic Invertebrate Sampling of the Lower Duwamish Waterway Quality Assurance Project Plan (July 30, 2004). Where specific guidance is not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The following items were evaluated during the review:

- Holding Times
- Instrument Calibration
- Blanks
- Internal Standards
- Target Compound Identifications
- Compound Quantitation and CRQLs
- System Performance

Only issues which require comment or action are discussed in this report. Data deficiencies are arranged by method. Potential effects of data anomalies have been described where possible.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

Overall Data Assessment

Holding time exceedances have warranted the qualification of all samples in this data set.

Based upon the information reviewed, the overall data quality is considered acceptable with the noted limitations.

GC/MS Chlorinated Pesticides by EPA SW 846 Method 8270C

I. Technical Holding Times

All technical holding time requirements were met with the following exceptions:

Associated SDG	Sample	Compound	Total Days From Sample Extraction Until Analysis	Required Holding Time (in Days) From Sample Extraction Until Analysis	Flag	A or P
K2406516	LDW-C10-S2 LDW-C10-S1	All TCL compounds	117	40	J (all detects) UJ (all non-detects)	A
K2406516	LDW-C7-S1 LDW-C8-S	All TCL compounds	118	40	J (all detects) UJ (all non-detects)	A
K2407012	LDW-B8a-S	All TCL compounds	95	40	J (all detects) UJ (all non-detects)	A
K2407473	LDW-B5a-S	All TCL compounds	70	40	J (all detects) UJ (all non-detects)	A

Although the analysis holding time was grossly exceeded (>2X) for samples LDW-C10-S2, LDW-C10-S1, LDW-C7-S1, LDW-C8-S and LDW-B5a-S, results were qualified as estimated "J/UJ". GC/MS confirmation analyses were performed for qualitative identification only.

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all target compounds were within validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 25.0% .

All of the continuing calibration RRF values were within validation criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No chlorinated pesticide contaminants were found in the method blanks performed in the pesticide analyses (Method 8081A) .

VI. Internal Standards

All internal standard areas and retention times were within QC limits.

VII. Target Compound Identification

All target compound identifications were within validation criteria.

VIII. Compound Quantitation and Reported CRQLs

All compound quantitation and CRQLs were within validation criteria.

IX. System Performance

The system performance was acceptable.

Reviewer: [illegible]
2nd Reviewer: [illegible]

Method: Semivolatiles (EPA SW 846 Method 8270C)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓	✓		
Cooler temperature criteria was met.	✓			
II. GC/MS Instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?			✓	
Were all percent relative standard deviations (%RSD) $\leq$ 30% and relative response factors (RRF) $\geq$ 0.05?	✓			
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Were all percent differences (%D) $\leq$ 25% and relative response factors (RRF) $\geq$ 0.05?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?				
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.				
VI. Surrogate spikes				
Were all surrogate %R within QC limits?				
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?				
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?				
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.				
Was a MS/MSD analyzed every 20 samples of each matrix?				

Validation Area	Yes	No	NA	Findings/Comments
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?				
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?				
Was an LCS analyzed per extraction batch?				
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?				
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?			✓	
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Internal standards				
Were internal standard area counts within -50% or +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds from the associated calibration standard?	✓			
XI. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?			✓	
Did compound spectra meet specified EPA "Functional Guidelines" criteria?			✓	
Were chromatogram peaks verified and accounted for?	✓			
XII. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?			✓	
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Tentatively identified compounds (TICs)				
Were the major ions (> 10 percent relative intensity) in the reference spectrum evaluated in sample spectrum?			✓	
Were relative intensities of the major ions within ± 20% between the sample and the reference spectra?			✓	
Did the raw data indicate that the laboratory performed a library search for all required peaks in the chromatograms (samples and blanks)?			✓	
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			

Validation Area	Yes	No	NA	Findings/Comments
XVI. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target compounds were detected in the field duplicates.			✓	
XVII. Field blanks				
Field blanks were identified in this SDG.		✓		
Target compounds were detected in the field blanks.			✓

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$RRF = (A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
$\%RSD = 100 * (S/X)$

A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard
S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported RRF (1000 std)	Recalculated RRF (1000 std)	Reported Average RRF (Initial)	Recalculated Average RRF (Initial)	Reported %RSD	Recalculated %RSD

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration averege RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?			✓	
Were all percent relative standard deviations (%RSD) $\leq$ 30% and relative response factors (RRF) $\geq$ 0.05?	✓			
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Were all percent differences (%D) $\leq$ 25% and relative response factors (RRF) $\geq$ 0.05?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?				
Was a method blank analyzed for each matrix and concentration?				
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.				
VI. Surrogate spikes				
Were all surrogate %R within QC limits?				
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?				
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?				
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.				
Was a MS/MSD analyzed every 20 samples of each matrix?				

Validation Area	Yes	No	NA	Findings/Comments
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?				
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?				
Was an LCS analyzed per extraction batch?				
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?				
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?				
Were the performance evaluation (PE) samples within the acceptance limits?				
X. Internal standards				
Were internal standard area counts within -50% or +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds from the associated calibration standard?	✓			
XI. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XII. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Tentatively identified compounds (TICs)				
Were the major ions (> 10 percent relative intensity) in the reference spectrum evaluated in sample spectrum?			✓	
Were relative intensities of the major ions within ± 20% between the sample and the reference spectra?			✓	
Did the raw data indicate that the laboratory performed a library search for all required peaks in the chromatograms (samples and blanks)?			✓	
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓
