PROJECT NARRATIVE

Basis for the Data Validation

This report presents the results of Full and Summary Validation (EPA Stage 4 and Stage 2B) performed on clam tissue and sediment and quality control sample data for the Lower Duwamish Waterway Baseline Sampling project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Analytical Resources, Inc. (ARI), Tukwila, Washington, Alpha Analytical, Mansfield, Massachusetts, Brooks Applied Laboratories, Bothell, Washington, and SGS Axys, Sidney BC, Canada. The analytical methods and EcoChem project chemists are listed below.

Analysis	Method	Primary Review	Secondary Review
Semivolatile Organic Compounds	SW 8270D	E. Clayton	C. Frans
Polynuclear Aromatic Hydrocarbon (PAH) Compounds	SW 8270D-SIM		
Tributyltin Compounds	SW 8270D-SIM		
PCB Aroclors	SW 8082A		
Organochlorine Pesticides	ALS SOP PEST MSMS	C. Frans	R. Frans
Dioxins & Furans	EPA 1613B	E. Clayton	C. Frans
PCB Congeners	EPA 1668C		
Total Vanadium	SW 6020A		
Inorganic Arsenic	EPA1632 Mod		
Total Organic Carbon	SW 9060		
Lipids	Bligh & Dyer		
Total Solids	SM 2540-G		
Black Carbon	SW9060M/Gustafsson		

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Lower Duwamish Waterway Group Clam Collection and Chemical Analyses – Quality Assurance Project Plan and Appendix C* (Windward, April 2018); *National Functional Guidelines for Organic Data Review* (USEPA 2008 & 2014); *National Functional Guidelines for Inorganic Data Review* (USEPA 2010); and *National Functional Guidelines for Chlorinated Dibenzo-p-Dioxins (CDDs) & Chlorinated Dibenzofurans (CDFs) Data Review,* (USEPA September 2011), USEPA *R10 Data Validation and Review Guidelines for Polychlorinated Dibenzo-p-Dioxin and Polychlorinated Dibenzofuran Data (PCDD/PCDF) Using Method 1613B and SW846 Method 8290A (USEPA May 2014)*.

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R, the data are to be rejected and should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced previously.

Data qualifier definitions, reason codes, and validation criteria are included as Appendix A. A Qualified Data Summary Table is included in Appendix B. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Lower Duwamish Waterway: Clam Tissue
Semi-Volatile Hydrocarbon Compounds by EPA SW8270D

This report documents the review of analytical data from the analysis of tissue samples and the associated laboratory quality control (QC) samples. Samples were analyzed by Analytical Resources, Inc. (ARI), Tukwila, Washington. Refer to the Sample Index for a complete list of samples.

SDG	Number of Samples	Validation Level
18F0364	3 Tissue	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table:

✓	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	GC/MS Instrument Performance	✓	Target Analyte List
✓	Initial Calibration (ICAL)	✓	Internal Standards
2	Continuing Calibration (CCAL)	1	Certified Reference Material
✓	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	✓	Reported Results
1	Surrogate Compounds	✓	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	1	Calculation Verification
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Continuing Calibration

A continuing calibration verification (CCAL) standard was analyzed at the required frequency. Relative response factors (RRF) were greater than or equal to 0.05 for all compounds except for poorly responding compounds with RRF values greater than or equal to 0.01. The percent difference

(%D) values were less than or equal to 25% for all compounds except for poorly responding compounds were less than or equal to 40.0%. When the CCAL %D values indicate a potential low bias, associated results are estimated (J/UJ-5BL). Only the associated positive results are estimated (J-5BH) if the %D value indicates a potential high bias.

The following CCAL outlier required qualification:

SDG	CCAL Date	Compound	Potential Bias	Action
18F0364	7/05/18	Pentachlorophenol	Low	UJ-5BL

Surrogate Compounds

The surrogate compounds d5-nitrobenzene, 2,4,6-tribromophenol, d14-p-terphenyl, d4-1,2-dichlorobenzene, 2-fluorophenol, d5-phenol, d4-2-chlorophenol, and 2-fluorobiphenyl, were added to all field and batch QC samples. When two or more surrogate %R values are below the control limits and indicate a potential low bias, associated results for the are estimated (J/UJ-13L). When two or more surrogate %R values are greater than the control limit and indicate a potential high bias, only the positive results for a sample are estimated (J-13H). If there is one surrogate outlier that is less than 10% recovery, the reporting limits for that fraction are rejected (R-13L) and the detections are estimated (J-13L). With the exceptions noted below, all surrogate spike recoveries were within the laboratory control limits.

For Samples LDW18-S1-CLWB-Comp1, LDW18-S2-CLWB-Comp1, and LDW18-S3-CLWB-Comp1, the %R values for 2,4,6-tribromophenol were greater than the upper control limit. The other acid surrogates were in control; no qualifiers were added based on these single outliers.

Field Blanks

No field blanks were submitted with this data set.

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. No action is taken unless both the MS and MSD percent recovery (%R) values are outside the control limits for MS/MSD %R outliers. Precision is evaluated using the RPD values calculated between the MS and MSD results. Any RPD values outside the control limits indicate uncertainty in the measured results for the sample. Qualifiers were only issued to the parent sample.

When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-8). Only the associated positive results are estimated (J-8) if the %R values indicate a potential high bias. Associated positive results are estimated (J-9) if the RPD values indicate uncertainty.

The MS/MSD analyses were performed using Sample LDW18-S2-CLWB-Comp1. The MS %R value for bis(2-ethylhexyl)phthalate was greater than the upper control limit; the MSD %R value was acceptable. No action was taken for this single outlier.

Field Duplicates

No field duplicates were submitted.

Certified Reference Material

No certified reference material was analyzed.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exception noted previously, accuracy was acceptable as demonstrated by the surrogate, LCS, MS/MSD recovery values. Precision was acceptable as demonstrated by the RPD values for the MS/MSD and field duplicate analyses.

Results were estimated due to a continuing calibration verification accuracy outlier.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Lower Duwamish Waterway: Clam Tissue & Sediment
Polynuclear Aromatic Hydrocarbon Compounds by EPA SW8270D-SIM

This report documents the review of analytical data from the analysis of sediment and tissue samples and the associated laboratory quality control (QC) samples. Samples were analyzed by Analytical Resources, Inc. (ARI), Tukwila, Washington. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
18E0231	17 Sediment & 16 Tissue	EPA Stage 4
18F0364	12 Tissue	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table:

1	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	GC/MS Instrument Performance	✓	Target Analyte List
✓	Initial Calibration (ICAL)	✓	Internal Standards
✓	Continuing Calibration (CCAL)	✓	Certified Reference Material
✓	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	2	Reported Results
1	Surrogate Compounds	✓	Compound Identification
2	Laboratory Control Samples (LCS/LCSD)	1	Calculation Verification
✓	Matrix Spike/Matrix Spike Duplicates (MS/MSD)		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received the sample coolers within the advisory temperature range.

SDG 18E0231: The ID for Sample LDW18-SSCL-A09 was listed as LDW18-SSCL-A on the container. The ID listed on the COC was used for login purposes.

Surrogate Compounds

The surrogate compounds dibenzo(a,h)anthracene-d14, fluoranthrene-d10, and 2-methylnaphthalene-d10, were added to all field and batch QC samples. When two or more surrogate %R values are below the control limits and indicate a potential low bias, associated results for the are estimated (J/UJ-13L). When two or more surrogate %R values are greater than the control limit and indicate a potential high bias, only the positive results for a sample are estimated (J-13H). If there is one surrogate outlier that is less than 10% recovery, the reporting limits for that fraction are rejected (R-13L) and the detections are estimated (J-13L). With the exceptions noted below, all surrogate spike recoveries were within the laboratory control limits.

SDG 18E0231: For Samples LDW18-SSCL-A09 and LDW18-SSCL-A17, the %R values for 2-methylnaphthalene-d10) were less than the lower control limit at 31.8% and 30.8%, respectively. The other base-neutral surrogates were in control; no qualifiers were added based on these single outliers.

Field Blanks

No field blanks were submitted with this data set.

Field Duplicates

For sediment samples, the QAPP RPD control limit is 35% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

With the following exceptions, all acceptance criteria were met.

SDG	Parent Sample	Duplicate Sample	Analyte	Outlier Type
18E0231	LDW18-SSCL-A11	LDW18-SSCL-A11-FD	Benzo(a)anthracene	35% RPD
			Indeno(1,2,3-cd)pyrene	35% RPD

Certified Reference Material

SDG 18E0231: Certified reference materials (CRM) CRM142 (Silty Loam) was analyzed with this analytical data set. All acceptance criteria were met.

Reporting Limits

SDG 18E0231: Reporting limits were elevated due to required dilutions.

Reported Results

SDG 18E0231: Several analytes were reported with an "E" flag indicating a result that exceeded the upper calibration range for Samples LDW18-SSCL-A01, LDW18-SSCL-A03, and LDW18-SSCL-A18. The "E" flagged results were flagged as do-not-report (DNR-20) in the original analysis and all other results in the dilution analyses were flagged (DNR-11).

Calculation Verification

SDG 18E0231: Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted previously, accuracy was acceptable as demonstrated by the surrogate, LCS, MS/MSD recovery values. With the exceptions noted above, precision was acceptable as demonstrated by the RPD values for the MS/MSD and field duplicate analyses.

Data were qualified as do-not report to indicate which result from multiple reported results should not be used.

Data that have been flagged as do-not-report should not be used for any purpose.

All other data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Lower Duwamish Waterway: Clam Tissue
Organotin Compounds by SW8270D-SIM

This report documents the review of analytical data from the analyses of tissue samples and the associated laboratory quality control (QC) samples. Samples were analyzed by Analytical Resources, Inc. (ARI), Tukwila, Washington. The Sample Index lists the samples reviewed.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
18F0364	3 Tissue	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The QC requirements that were reviewed are summarized in the following table:

1	Sample Receipt, Preservation, and Holding Times	✓	Matrix Spike/Matrix Spike Duplicates (MS/MSD)
✓	GC/MS Instrument Performance Check	1	Field Duplicates
✓	Initial Calibration (ICAL)	✓	Internal Standards
✓	Continuing Calibration (CCAL)	1	Certified Reference Material
✓	Method Blanks	✓	Reporting Limits
1	Field Blanks	✓	Reported Results
✓	Surrogate Compounds	✓	Compound Identification
✓	Laboratory Control Samples (LCS)	1	Calculation Verification

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Field Blanks

No field blanks were submitted with this data set

Field Duplicates

No field duplicates were submitted with this data set.

Certified Reference Material

No reference material was analyzed with this data set.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. Accuracy was acceptable as demonstrated by the surrogate, LCS, and MS/MSD recovery values. Precision was acceptable as demonstrated by the RPD values for the matrix spike analyses.

No data were qualified for any reason.

All data, as reported, are acceptable for use.

DATA VALIDATION REPORT
Lower Duwamish Waterway: Clam Tissue
PCB Aroclors by EPA 8082A

This report documents the review of analytical data from the analysis of tissue samples and the associated laboratory quality control (QC) samples. Samples were analyzed by Analytical Resources, Inc. (ARI), Tukwila, Washington. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
18F0364	9 Sediment	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Continuing Calibration (CCAL)	✓	Target Analyte List
✓	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	2	Compound Identification
✓	Surrogate Compounds	2	Reported Results
✓	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification (Full validation only)
✓	Laboratory Control Samples (LCS)		

1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Field Blanks

No field blanks were submitted with this data set.

Certified Reference Material

Certified reference material, Puget Sound Reference Material, was analyzed with these analytical data sets. All recoveries were within acceptance criteria.

Field Duplicates

No field duplicates were submitted with this data set.

Reported Results

The laboratory reported results from both the primary and confirmation columns. One result for each analyte was flagged as do-not-report (DNR-11) to indicate which result to use from multiple reported results.

Compound Identification

As required by the method, the laboratory analyzed any samples with positive detections on a confirmatory column. The results from the two analytical columns were compared for agreement. An elevated RPD value may indicate the presence of an interference resulting in a high bias. When the RPD value was greater than or equal to 40% but less than 60% the reported value was estimated (J-3). If the RPD value was greater than 60%, the result was qualified as a tentative identification (NJ-3). Confirmation outliers resulting in data qualification are discussed below.

For the following sample, the second column confirmation RPD value was greater than 40% and were estimated (J-3):

SDG	Sample ID	Compound	RPD	Qualifier
18F0364	LDW18-C04-CLWB-Comp2	Aroclor-1260	55	J-3

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. Accuracy was acceptable as demonstrated by the surrogate, LCS, and MS/MSD recoveries. Precision was also acceptable as demonstrated by the MS/MSD and field duplicate RPD values.

One result was estimated due to a dual column confirmation RPD outlier. Data were qualified as do-not report to indicate which result from multiple reported results should not be used.

Data flagged as do-not-report should not be used for any reason.

All other data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Lower Duwamish Waterway: Clam Tissue
Chlorinated Pesticides by ALS SOP PEST MSMS

This report documents the review of analytical data from the analyses of tissue samples and the associated laboratory quality control (QC) samples. Samples were analyzed by ALS Environmental, Kelso, Washington. Refer to the Sample Index for a list of samples reviewed.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
K1806476	6 Tissue	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

The tune summary was missing from the data package. The laboratory was contacted and provided the document.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The QC requirements that were reviewed are listed below.

✓	Sample Receipt, Preservation, and Holding Times	**1**	Reference Material
✓	Tune	**1**	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)
✓	Initial Calibration	**1**	Field Duplicates
✓	Continuing Calibration	**1**	Internal Standards
✓	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	**1**	Reporting Limits
1	Labeled Compounds/ Surrogate Compounds	✓	Reported Results
1	Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)	✓	Compound Identification

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Continuing Calibration

Continuing calibration verification (CCV) standards were analyzed at the required frequency. With the exceptions noted, the percent difference (%D) values were less than or equal to 25% for all compounds. When the CCV %D values indicate a potential low bias, associated results are estimated (J/UJ-5BL). Only the associated positive results are estimated (J-5BH) if the %D value indicates a potential high bias.

Percent difference values were greater than the control limit for 2,4'-DDE, alpha-chlordane, and Dieldrin and indicated a potential high bias. There were no positive results for these compounds; no data were qualified.

Field Blanks

No field blanks were submitted.

Labeled Compounds/Surrogate Compounds

Isotope-stable labeled compounds were added to each field and QC sample extract. Because they are added prior to extraction and are also used to quantitate the associated target compound analog, they act as internal standards as well as surrogate compounds. Based on the dual nature of the way the labeled compounds are used in this method, they have been evaluated using both internal standard and surrogate criteria.

The responses for the labeled compounds were evaluated using the typical internal standard acceptance limits of 50-200% of the response in the associated calibration verification standard. The internal standard responses were all within the control limits.

The labeled compounds are added to the samples prior to extraction, so they function as indicators for extraction efficiency and matrix interference in addition to being used for target analyte quantitation. The labeled compound %R values were evaluated using the QAPP control limits of 30-150% recovery. There were several recovery values that were less than the control limits, however, all of them were associated with QC samples and did not require qualification.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)

The recovery values for alpha-chlordane, gamma-chlordane, and cis-nonachlor were greater than the upper control limit of 150%, but these analytes were not detected in the associated field samples; no data were qualified.

Reference Material

A reference material sample was not analyzed with this data set.

Matrix Spikes/Matrix Spike Duplicates

Matrix spikes were not analyzed with the data set. Accuracy and precision were assessed using the Laboratory Control Sample/Laboratory Control Sample Duplicate.

Field Duplicates

No field duplicates were submitted.

Internal Standards

The internal standard, pyrene-d10, was added to all samples as a quantitation reference for the isotope-labeled compounds. All internal standard responses were within the method specified control limits of 50%-200% of the response in the associated calibration verification standard.

Reporting Limits

Reporting limits were adjusted based on the sample weight prepared and are greater than the QAP reporting limits.

Calculation Verification

Calculation verifications were performed for this sample delivery group (SDG). No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the surrogate and LCS/LCSD percent recoveries. Precision was also acceptable as demonstrated by the LCS/LCSD RPD values.

No data were qualified for any reason.

All data, as reported, are acceptable for use.

DATA VALIDATION REPORT
Lower Duwamish Waterway: Clam Tissue
Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analysis of sediment samples and the associated laboratory quality control (QC) samples. Samples were analyzed by SGS Axys, Sidney, BC, Canada. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
WG64557	9 Tissue	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

SDG WG64557: The collection dates were missing from the laboratory report. The collection dates were obtained from another data report and were entered into the EDD.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
✓	System Performance and Resolution Checks	✓	Laboratory Duplicates
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Calibration Verification (CVER)	✓	Target Analyte List
1	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	2	Compound Identification
✓	Labeled Compound Recovery	✓	Compound Quantitation
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification
✓	Ongoing Precision and Recovery (OPR)		

✓Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received one of the sample coolers greater than the advisory temperature range at 6.5°C. No data were affected; no qualifiers were added.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values cannot be considered as positive identifications, but are "estimated maximum possible concentrations". When these occurred in the method blank the results were considered as false positives. No action levels were established for these analytes.

Method blanks were analyzed at the appropriate frequency. Contaminant levels, associated samples, and action levels are documented in the data validation worksheets.

1,2,3,4,6,7,8-HpCDD was detected. All associated sample results were greater than the action level; no data were qualified.

Field Blanks

No field blanks were submitted with this data set.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Accuracy was assessed using labeled compound recoveries and the ongoing precision and recovery (OPR) sample. Precision was evaluated using the laboratory duplicate analyses.

Certified Reference Material

Certified reference material (CRM) National Research Council Canada CARP-2 was analyzed with this analytical data set. All acceptance criteria were met.

Field Duplicates

Field duplicates were not submitted with this data set.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF detects using an alternate GC column. The DB5 column that is typically used cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. The laboratory performed a second column confirmation on a DB225 column. All 2,3,7,8-TCDF results reported from the DB5 column were qualified as do-not-report (DNR-11) in favor of the DB225 results.

The laboratory reported results for 1,2,3,7,8,9-HxCDD from both analysis columns and indicated the primary column as not reportable in the EDD. Therefore, all 1,2,3,7,8,9-HxCDD results reported from the DB5 column were qualified as do-not-report (DNR-11) in favor of the DB225 results.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. An EMPC value is reported when a peak was detected but did not meet identification criteria, as required by the method; therefore, the result cannot be considered as a positive identification for the analyte. To indicate that the reported result for an individual analyte is in effect an elevated detection limit, the EMPC values were qualified as not detected (U-25) for native compound results below the reporting limit and were estimated (J-25) for homolog values and native compound results greater than the reporting limit.

Calculation Verification

Calculation verifications were performed for this sample delivery group (SDG). No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed the specified analytical method. Accuracy was acceptable, as demonstrated by the labeled compound and OPR recoveries. Precision was also acceptable as indicated by the laboratory duplicate samples.

Data were qualified as estimated to indicate that EMPC values represent elevated detection limits. Data were qualified as do-not report to indicate which result from multiple reported results should not be used.

Data flagged as do-not-report should not be used for any reason.

All other data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Lower Duwamish Waterway: Clam Tissue
PCB Congeners by EPA 1668C

This report documents the review of analytical data from the analysis of tissue samples and the associated laboratory quality control (QC) samples. Samples were analyzed by SGS Axys, Sidney, BC, Canada. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
WG64623	6 Tissue	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	2	Laboratory Duplicates
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Calibration Verification (CVER)	✓	Target Analyte List
2	Laboratory Blanks	✓	Reporting Limits
✓	Labeled Compound Recovery	2	Compound Identification
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	✓	Compound Quantitation
✓	Ongoing Precision and Recovery (OPR)	✓	Calculation Verification
2	Certified Reference Material		

1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted.
Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for

non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values cannot be considered as positive identifications, but are "estimated maximum possible concentrations". When these occurred in the method blank the results were considered as false positives. No action levels were established for these analytes.

Ten (10) compounds were detected (excluding homologs and TEQs) in the laboratory method blank. All but three results for the associated samples were greater than the action levels. The PCB-209 results in Samples LDW18-C04-CLWB-Comp2, LDW18-C04-CLWB-Comp2 (Lab Duplicate), and LDW18-C06-CLWB-Comp2 were less than the action level and were qualified as not detected (U-7) at the reported concentrations.

Matrix Spikes/Matrix Spike Duplicates

Matrix spike/matrix spike duplicates (MS/MSD) were not analyzed. Accuracy was assessed using labeled compound recoveries and the ongoing precision and recovery (OPR) sample. Precision was evaluated using the laboratory duplicate analyses.

Certified Reference Material

National Research Council Canada (NRCC) certified reference material CARP-2 was analyzed with this analytical data set. With the following exceptions, all analytes were recovered with the QAP control limits of 40%-145% recovery.

PCB-44 was recovered greater than the upper control limit; associated positive sample results were estimated (J-12H). PCB-164, PCB-182, and PCB-190 recovered less than the lower control limits; associated sample results were estimated (J/UJ-12L).

Laboratory Duplicate Analysis

One sample from each laboratory batch was extracted and analyzed in duplicate. Relative percent difference (RPD) values were calculated for detected analytes where results are greater than five times the method detection limit (MDL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. With the exceptions noted below, all RPD values were less than the 50% control limit.

The laboratory performed a duplicate analysis for Sample LDW18-C04-CLWB-Comp2. The difference between the results for 2,4-DiCB was greater than 2x the RL; the results for this compound were estimated (J/UJ-9) in the parent and duplicate sample.

Field Duplicates

No field duplicates were submitted.

Compound Identification

For several samples, the laboratory reported EMPC or "estimated maximum possible concentration" values for one or more of the target analytes. An EMPC value is reported when a peak was detected but did not meet identification criteria, as required by the method; therefore, the result cannot be

considered as a positive identification for the analyte. To indicate that the reported result for an individual analyte is in effect an elevated detection limit, the EMPC values were qualified as not detected (U-25) for native compound results below the reporting limit and were estimated (J-25) for homolog values and native compound results greater than the reporting limit.

Calculation Verification

Calculation verifications were performed for this sample delivery group (SDG). No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the labeled compound, laboratory control sample, and reference material percent recoveries. With the exception noted previously, precision was also acceptable as demonstrated by the laboratory duplicate values.

Data were flagged as not detected at the reported concentration due to laboratory blank contamination. Data were also flagged as not detected and were estimated to indicate that EMPC values represent elevated detection limits. Results were estimated due to a laboratory duplicate precision outliers and certified reference material recovery outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Lower Duwamish Waterway: Clam Tissue
Vanadium by EPA 6020A
Inorganic Arsenic by EPA 1632 Mod

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. Samples were analyzed by Analytical Resources, Inc. (ARI), Tukwila, Washington and Brooks Applied Labs, Bothell, Washington. Refer to the Sample Index for a complete list of samples.

SDG	Number of Samples and Matrix	Validation Level
18F0364	3 Tissue	EPA Stage 3
1828027	12 Tissue	Batch B181796 EPA Stage 3
	10 Tissue	Batch B181797 EPA Stage 2B

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The QC requirements that were reviewed are listed below.

✓	Sample Receipt, Preservation, and Holding Times	✓	Matrix Spikes (MS) and Matrix Spike Duplicates (MSD)
✓	ICP-MS Tune	2	Laboratory Duplicates
✓	Initial Calibration	✓	ICP-MS Internal standards
✓	Calibration Verification	✓	Interference Check Samples
✓	CRDL Standards	1	Field Duplicates
✓	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	✓	Reported Results
✓	Laboratory Control Samples (LCS)	1	Calculation Verification

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
1 Quality control outliers are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Field Blanks

Field blanks were not submitted with this data set.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate samples (MS/MSD) were analyzed at the proper frequency of one per 20 samples or one per batch for soil samples. Where analyte concentrations were less than 4x the spike amount, the percent recovery (%R) and relative percent difference (RPD) values were evaluated. If the percent recovery values indicate a potential low bias, associated results are estimated (J/UJ-8). If the %R values indicate a potential high bias, only the associated positive results are estimated (J-8).

For %R values less than 30%, indicating an extreme low bias, the results for the post digestion spike (PDS) were also evaluated. If the post spike %R values were acceptable, then associated results were estimated (J/UJ-8). If the post spike %R value was also less than the control limits of 75%-125%, the positive results were estimated (J/UJ-8) and the non-detects were rejected (R-8). If the PDS %R values were greater than the control limit, then associated positive results were estimated (J-8) and if the PDS %R was less than the control limit, associated results were estimated (J-8) without an indication of bias. For cases indicating conflicting bias because multiple matrix spike samples were included in a batch, only the parent sample was qualified with a bias indication.

Precision is indicated by the relative percent difference (RPD) between the MS and MSD values. RPD values outside the control limits indicate uncertainty in the measured results for the sample and positive results are estimated (J-9).

The following analytes were qualified in one or more samples based on %R and/or RPD value outliers. Qualifiers were issued to all samples associated with a QC batch.

SDG 1828027: Sample LDW18-C11-CLSP-Comp1 was analyzed as the matrix spike. The RPD value reported for arsenic (inorganic) was greater than the control limit at 168%. The parent sample concentration for this sample was significantly greater than 4 times the spike amount. The laboratory calculated the RPD value using the observed percent recoveries of the spiked samples. The concentrations for the matrix spike and matrix spike duplicate were consistent at 308 and 333 mg/kg. Using the concentrations of the spiked samples to calculate the RPD results in a value of 7.8% which is within the control limits. Based on the consistent concentrations measured for the spiked samples, the precision criterion was achieved, and qualifiers were not required.

Field Duplicates

Field duplicates were not submitted with this data set.

Reporting Limits

All SDGs: Several samples were diluted due to interferences or other factors and the reporting limits were elevated.

Calculation Verification

All SDGs: Several results were verified by recalculation from the raw data. No calculation or transcription errors were noted.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical methods. Accuracy was acceptable, as demonstrated by the LCS and MS/MSD %R values. Precision was acceptable as demonstrated by the laboratory duplicate and MS/MSD RPD values.

No data were qualified for any reason.

All data, as reported, are acceptable for use.

DATA VALIDATION REPORT
Lower Duwamish Waterway: Clam Tissue & Sediment
Wet Chemistry Tests

This report documents the review of analytical data from the analysis of tissue samples and the associated laboratory quality control (QC) samples. Analytical Resources, Inc., Tukwila, Washington, analyzed the samples. Refer to the Sample Index for a list of samples reviewed.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
18E0231	16 Tissue & 17 Sediment	EPA Stage 3
18F0331	22 Tissue	EPA Stage 2A
18F0364	29 Tissue	EPA Stage 2A
L1828580	17 Sediment	EPA Stage 3

The analytical tests that were performed are summarized below:

LABORATORY	PARAMETER	METHOD
Analytical Resources, Inc.	Lipid	Bligh & Dyer
	Total Solids	SM 2540-G
	Total Organic Carbon(TOC)	EPA 9060
Alpha Analytical	Black Carbon	EPA 9060M/Gustafsson

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results (100% verification) reported in the electronic data deliverable (EDD) were verified by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified

TECHNICAL DATA VALIDATION

The QC requirements for review are listed below.

1	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
2	Laboratory Blanks	2	Laboratory Replicates
1	Field Blanks	✓	Reporting Limits
1	Reference Materials	✓	Reported Results
2	Matrix Spike/Matrix Spike Duplicate (MS/MSD)	✓	Calculation Verification

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received the sample coolers within the advisory temperature range.

SDG 18E0231: The ID for Sample LDW18-SSCL-A09 was listed as LDW18-SSCL-A on the container. The ID listed on the COC was used for login purposes.

SDG 18F0331: The samples arrived at the laboratory at 14.6°C. The samples arrived at the laboratory within 30 minutes of sample collection; no qualifiers were added.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results. For laboratory blanks that are less than the negative MDL, positive results less than the action level of five times the absolute value of the blank concentration are estimated (J-7) and non-detects are estimated (UJ-7) to indicate a potential low bias.

Laboratory blanks were analyzed at the appropriate frequency. Contaminant levels, associated samples, and action levels are documented in the data validation worksheets.

SDG 18E0231: The method blank for lipids analysis had a detected value. Associated sample concentrations were greater than the action level, no data were qualified.

SDG 18F0331: The method blanks for lipids analysis had detected values. Associated sample concentrations less than the action level were estimated (J-7H) to indicate a potential high bias.

Field Blanks

Field blanks were not submitted.

Reference Material

In lieu of a laboratory control sample, a standard reference material, NIST 1941B, was analyzed with each batch of total organic carbon analyses. All acceptance criteria were met.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate samples (MS/MSD) were analyzed at the proper frequency of one per 20 samples or one per batch for soil samples.

For accuracy, where analyte concentrations were less than 4x the spike amount, the percent recovery (%R) values were evaluated. If the percent recovery values indicate a potential low bias, associated results are estimated (J/UJ-8L). If the %R values indicate a potential high bias, only the associated positive results are estimated (J-8H). No qualifiers were added for a single outlier in the MS or MSD only.

Precision is indicated by the relative percent difference (RPD) between the MS and MSD values. RPD values outside the control limit of 20% indicate uncertainty in the measured results for the sample and positive results are estimated (J-9).

Total organic carbon results were qualified based on %R or RPD value outliers. Qualifiers were issued to all samples associated with a QC batch.

SDG	Parent Sample ID	Analyte	MS %R	MSD %R	RPD	Potential Bias	Action
18E0231	LDW18-SSCL-A11-FD	TOC	17.2	No MSD	--	Low	J-8L
L1828580	LDW18-SSCL-A01-BC	%Soot	--	218	47	--	J-9

SDG L1828580: The RPD values for the matrix spikes performed on Sample LDW18-SSCL-A11 were reported as 43% and 49% for the two replicates. The percent recoveries for the matrix spikes were between 93% and 103%. The laboratory calculates the RPD based on the concentration values of the spiked samples rather than the percent recoveries. Because of different aliquot sizes analyzed for the matrix spike and its duplicate, the RPD value calculated using the concentrations was greater than the control limit. The RPD values using the percent recoveries are 5.2% and 8.1% for the two replicates. These values are less than the QAP control limit of ±20% RPD for inorganic tests and qualifiers were not required.

Field Duplicates

Field duplicate samples were not submitted for tissue samples.

For sediment samples, the RPD control limit is 20% for results greater than 5x the reporting limit (RL) for TOC and solids and particle size percentages greater than 5% for grain size. For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

SDG L1828580: Samples LDW18-SS-178 & LDW18-SS-178-FD were submitted as field duplicates. The RPD for black carbon was greater than the control limit at 63%.

Laboratory Duplicates

Total Organic Carbon and Grain Size:

One sample from each laboratory batch was prepared and analyzed in duplicate. Relative percent difference (RPD) values were calculated for detected analytes where results are greater than five times the method detection limit (MDL) for TOC and particle size percentages greater than 5% for grain size. For grain size, qualifiers are only applied to the parent sample due to the individual nature of each sample's composition. Qualifiers are applied to all samples in an analysis batch for TOC. With the exception noted below, all RPD values were less than the 20% control limit.

SDG	Parent Sample ID	Analyte	RPD	Action
18E0231	LDW18-SSCL-A11-FD	TOC	39.7	J-9

Black Carbon:

All samples were analyzed in duplicate. the RPD control limit is 20% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. Qualifiers are applied to the parent and duplicate samples.

The following samples were estimated (J-9):

SDG	Sample ID	Analyte	RPD Outliers
L1828580	LDW18-SSCL-A04	Black Carbon	45.5%
	LDW18-SSCL-A05	Black Carbon	32.5%
	LDW18-SSCL-A09	Black Carbon	21.3%
	LDW18-SSCL-A10	Black Carbon	28.0%
	LDW18-SSCL-A18	Black Carbon	33.0%
	LDW18-SSCL-A19	Black Carbon	21.3%

Calculation Verification

SDG 18E0231: Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

SDG L1828580: The instrument raw data for black carbon are reported in concentration units only; no measured intensity values are provided. The calibration is preset by the instrument manufacturer and recalculations of the calibration could not be done. Calculation verifications were performed using the concentration values from the instrument and verifying percent recovery and RPD values. No calculation or transcription errors were observed.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical methods. With the exceptions noted above, accuracy was acceptable as demonstrated by the reference material and MS/MSD recoveries and precision was acceptable as indicated by the MS/MSD and laboratory and field duplicate RPD values.

Data were estimated due to method blank contamination, matrix spike accuracy and precision outliers, and laboratory replicate or duplicate precision outliers.

All data, as qualified, are acceptable for use.

ECOCHEM
Data Quality

APPENDIX A

DATA QUALIFIER DEFINITIONS
REASON CODES
AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES
Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L)[1] where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L)[1] where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L)[1] for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L)[1] where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L)[1] where appropriate
	12	Reference Material Use bias flags (H,L)[1] where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L)[1] where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L)[1] where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

[1] H = high bias indicated
L = low bias indicated

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
(Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C±2°C sediment/tissues may require storage at -20°C	NFG (1) Method (3)	**If required by project:** J (pos)/UJ (ND) if greater than 6° C	1	Use **PJ** for temp outliers; see **TM20** Current SW846 criterion is ≤ 6° C (3)
Holding Time	**Extraction Aqueous:** 7 days from collection **Extraction Solid:** 14 days from collection **Analysis (all matrices)**: 40 days from extraction Holding time may be extended to 1 year for frozen sediments/tissues	NFG (1) Method (3)	J (pos)/UJ (ND) if HT exceeded J (pos)/R (ND) if gross exceedance (> 2x HT)	1	Gross exceedance = > 2x HT, as per 1999 NFG
Instrument Performance					
Tuning	DFTPP Beginning of each 12 hour period Use method or project acceptance criteria	NFG (1) Method (3)	R (pos/ND) all analytes in all samples associated with the tune	24	
Initial Calibration **Sensitivity**	RRF ≥ 0.05 except: RRF ≥ 0.01 poor responders *	NFG (1) Method (3)	Use **PJ** to qualify J (pos)/UJ (ND)	5A	**TM-06** EcoChem Policy for the Evaluation and Qualification of GCMS Instrument Performance **PJ** - no action if response is stable (ICAL RSD and CCAL %D acceptable)
Initial Calibration **Stability**	Minimum 5 standards %RSD ≤ 20.0% except: %RSD ≤ 40.0% poor responders * **or** co-efficient of determination (r^2) > 0.99	NFG (1) Method (3)	J (pos) if %RSD > limit **or** r^2 value <0.99	5A	
Initial Calibration Verification Check	Prepared from second source; analyze after each ICAL Percent recovery limits = 70-130%	Method (3)	J (pos) %R > UCL J (pos)/UJ (ND) %R < LCL	5A (H,L)[4]	QAPP may have overriding accuracy limits.

Sample Handling					
Cooler/Storage Temperature Preservation	Cooler temperature: 4°C±2°C Preservation: Analyte/Method Specific	NFG [(1)] Method [(2)]	J (pos)/UJ (ND) if preservation requirements not met	1	Use **PJ** to qualify for cooler temp outliers.
Holding Time	Analyte/Method Specific	NFG [(1)] Method [(2)]	J (pos)/UJ (ND) if holding time exceeded	1	
Instrument Performance					
Initial Calibration (ICAL)	blank + multiple standards as per method requirements r ≥ 0.995	NFG [(1)] Method [(2)]	J (pos)/UJ (ND) for r < 0.995	5A	
Initial Calibration Verification (ICV)	Independent source analyzed immediately after calibration %R method specific	NFG [(1)] Method [(2)]	J (pos)/UJ (ND) if %R < lower control limit (LCL) J (pos) if %R > upper control limit (UCL)	5A (H,L)[3]	Qualify all samples in run
Continuing Calibration Verification (CCV)	Immediately following ICV, every 10 samples, and end of run %R method specific	NFG [(1)] Method [(2)]	J(pos)/UJ(ND) if %R < LCL J(pos) if %R > UCL	5B (H,L)[3]	Qualify samples bracketed by CCV outliers
Blank Contamination					
Method Blank (MB)	One per matrix per batch of (of ≤ 20 samples) Blank conc < MDL	NFG [(1)] Method [(2)]	U (pos) if result is < 5X method blank concentration	7	Refer to **TM-02** for additional information. Blank Evaluation based on NFG 1994

Copyright 2014 EcoChem, Inc.

Conventional Methods with Instrument Calibrations (i.e., Ion Chromatography, Total Organic Carbon)
(Based on Inorganic NFG 2010 and EPA methods)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Blanks (ICB/CCB)	After each ICV & CCV | blank concentration | < MDL	NFG [(1)] Method [(2)]	Action level is 5x absolute value of blank conc. For positive blanks: U (pos) results < action level For negative blanks: J (pos)/UJ (ND) results < action level	Pos Blanks: 7 Neg Blanks: 7L[3]	Use blanks bracketing samples for Qualification Refer to **TM-02** for additional information. **Hierarchy of blank review:** **#1 - Review MB, quaify as needed** **#2 - Review IB , qualify as needed** **#3 - Review FB , qualify as needed**
Field Blank (FB)	Blank conc < MDL	EcoChem standard policy	U (pos) if result is < 5x action level, as per analyte.	6	Qualify in associated field samples only. Refer to **TM-02** for additional information.
Precision and Accuracy					
Laboratory Control Sample (LCS)	One per matrix per batch (of ≤ 20 samples) %R within Method control limits (or Laboratory control limtis if none specified in method)	NFG [(1)] Method [(2)]	J (pos)/UJ (ND) if %R < LCL J (pos) if %R > UCL	10 (H,L)[3]	Qualify all samples in batch QAPP may have overriding accuracy limits.
Reference Materials (RM, CRM, SRM)	Result ±20% of the 95% confidence interval of the true value for analytes	EcoChem standard policy	J (pos)/UJ (ND) if < LCL J (pos) if > UCL	12 (H,L)[3]	QAPP may have overriding accuracy limits. Some manufacturers may have different RM control limits

Conventional Methods with Instrument Calibrations (i.e., Ion Chromatography, Total Organic Carbon)
(Based on Inorganic NFG 2010 and EPA methods)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Matrix Spike/ Matrix Spike Duplicate (MS/MSD)	Where applicable to method; MSD may not be required One per matrix per batch (of ≤ 20 samples) For samples <4x spike level, %R within method control limits (or Laboratory control limtis if none specified in method)	NFG [1] Method [2]	J (pos)/UJ (ND) if %R < LCL J (pos) if %R > UCL	8 (H,L)3	Qualify all samples in batch No action if native analyte concentration ≥ 4x spike added. Qualify all samples in batch. QAPP may have overriding accuracy limits.
Laboratory Duplicate (or MS/MSD)	One per matrix per batch (of ≤ 20 samples) RPD ≤ 20% for results ≥ 5x RL Solids: difference < 2X RL for results < 5X RL Aqueous: difference < 1X RL for results < 5X RL	NFG [1] Method [2]	J (pos)/UJ (ND) if RPD > 20% or if difference > control limit	9	Qualify all samples in batch. QAPP may have overriding precision limits.
Field Duplicate	Solids: RPD <50% (for results ≥ 5x RL) OR difference < 2X RL (for results < 5X RL) Aqueous: RPD <35% (for results ≥ 5x RL) OR difference < 1X RL (for results < 5X RL)	EcoChem standard policy	Qualify only parent and field duplicate samples J (pos)/UJ (ND)	9	QAPP may have overriding precision limits. Client/QAPP may not require qualification based on field precision.
Compound Quantitation					
Linear Range	Sample concentrations less than highest calibration standard	NFG [1] Method [2]	If result exceeds linear range & sample was not diluted J (pos)	20	
Dilutions, Re-extractions and/or Reanalyses	Report only one result per analyte	EcoChem standard policy	Use "DNR" to flag results that will not be reported.	11	**TM-04** EcoChem Policy for Rejection/Selection Process for Multiple Results

PROJECT NARRATIVE

Basis for the Data Validation

This report presents the results of Summary Validation (EPA Stage 2B) performed on passive sampler and quality control sample data for the Lower Duwamish Waterway Baseline Sampling project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by SGS Axys, Sidney BC, Canada. The analytical methods and EcoChem project chemists are listed below.

Analysis	Method	Primary Review	Secondary Review
Carcinogenic Polynuclear Aromatic Hydrocarbon (cPAH) Compounds	SW 8270D-SIM	R. Frans	C. Frans

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Lower Duwamish Waterway Group Clam Collection and Chemical Analyses – Quality Assurance Project Plan and Appendix C* (Windward, April 2018) and *National Functional Guidelines for Organic Data Review* (USEPA 2008 & 2014).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R, the data are to be rejected and should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced previously.

Data qualifier definitions, reason codes, and validation criteria are included as Appendix A. A Qualified Data Summary Table is included in Appendix B. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Lower Duwamish Waterway: Passive Sampler
Carcinogenic PAH Compounds by Axys SOP MLA-021 Rev 12

This report documents the review of analytical data from the analysis of passive samplers and the associated laboratory and field quality control (QC) samples. Samples were analyzed by SGS Axys, Sidney, BC, Canada. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
WG66438	11 Passive Sampler 3 Day Zero Samples 1 Exposure Blank Sample	EPA Stage 2B

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified. The sample IDs recorded on the chain-of-custody did not reflect the convention indicated in the QAPP. This discrepancy was noticed after the samples were received at the laboratory. The laboratory updated the sample IDs in the EDD, but the data package forms reflect the original COC IDs. The correlation between the original and corrected sample IDs are included in the laboratory data package in their correlation table. This report uses the corrected sample IDs.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	✓	Ongoing Precision and Recovery (OPR)
✓	Initial Calibration (ICAL)	1	Certified Reference Material
✓	Calibration Verification (CVER)	1	Field Duplicates
2	Laboratory Blanks	1	Target Analyte List
1	Exposure Blank	✓	Reporting Limits
1	Labeled Compound Recovery	2	Compound Identification
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	✓	Compound Quantitation

1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted.
Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results.

Chrysene was detected in the laboratory method blank, associated sample results less than the action limit were qualified (U-7).

Exposure Blank

Action levels were established at five times (5x) the concentration reported in the exposure blank. Following evaluation of the laboratory method blank, if a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-6). No action is taken if the sample result is greater than the action level, or for non-detected results.

Sample LDW18-PWPS-ExpBLK-PAH was submitted as an exposure blank. The labeled compounds listed below were used as part of the passive sampler collection and are not evaluated as contamination in the blank:

13C6-Chrysene

13C6-Indeno(1,2,3-cd)pyrene

13C6-Phenanthrene

Fluoranthene d-10

Following method blank evaluation, no detections of target analytes remained; qualification was not required.

Labeled Compound Recovery

All labeled compounds were recovered within the laboratory control limits with the exception of phenanthrene-d10 which was recovered slightly less than the lower control limit in the method blank. No action was taken for this QC sample.

Matrix Spikes/Matrix Spike Duplicates

Matrix spike/matrix spike duplicates (MS/MSD) were not analyzed. Accuracy was assessed using labeled compound recoveries and ongoing precision and recovery (OPR) sample.

Certified Reference Material

No certified reference material was analyzed with this analytical data set.

Field Duplicates

For passive sampler samples, the QAPP RPD control limit is 40% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

Samples LDW18-PWPS-A07 and LDW18-PWPS-A07Dup were identified as field duplicates. The RPD values for the analytes listed in flowing the table were greater than the control limit.

Analyte	RPD
Fluoranthene d-10	54
Benzo[j,k]fluoranthenes	51
Benzo[b]fluoranthene	46
Benzo[a]pyrene	52
13C6-Chrysene	44

Target Analyte List

The labeled analytes listed below are analyzed as target analytes in the field samples and trip blank and are listed as performance reference compounds (PRC). The analytes are used to measure the non-equilibrium conditions between the polyethylene sampler and the porewater. Data qualifiers are not applied to results for these compounds.

13C6-Chrysene

13C6-Indeno(1,2,3-cd)pyrene

13C6-Phenanthrene

Fluoranthene d-10

Compound Identification

The laboratory flagged several analytes, the with a "K" flag to indicate the ion ratio did not meet the laboratory criteria. Although the spectra were evaluated, and the parent ion was determined to be present, the ratio of the secondary ion to the primary (parent) ion was outside of the laboratory's criteria indicating potential uncertainly; these analytes were estimated (J-24).

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed the specified analytical method. With the exception previously noted, accuracy was acceptable as demonstrated by the labeled compound and laboratory control sample recoveries. With the exceptions previously noted, precision was also acceptable as demonstrated by the field duplicate RPD values.

Four results were flagged as not detected at the reported concentrations due to method blank contamination and several results were estimated due to ion ratio outliers.

All data, as qualified, are acceptable for use.

ECOCHEM
Data Quality

APPENDIX A

DATA QUALIFIER DEFINITIONS
REASON CODES
AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES
Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L)[1] where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L)[1] where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L)[1] for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L)[1] where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L)[1] where appropriate
	12	Reference Material Use bias flags (H,L)[1] where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L)[1] where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L)[1] where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

[1] H = high bias indicated
L = low bias indicated

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
(Based on NFG 1999 & 2008 and SW-846 Method 8270D)

RE: LDW AOC3 Task 4 (Inorganic As)

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
18F0331	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

Susan Dunnihoo, Director, Client Services

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Case Narrative

Client: Windward Environmental, LLC
Project: LDW AOC3 Task 4 (Inorganic As)
Work Order: 18F0331

Sample receipt

Samples as listed on the preceding page were received 21-Jun-2018 12:05 under ARI work order 18F0331. For details regarding sample receipt, please refer to the Cooler Receipt Form.

Samples were received above temperature but within a few hours of sampling. Homogenates were prepared in-house, and splits transshipped to Brooks Applied Laboratories..

Percent Lipids

The samples were prepared and analyzed within the recommended holding times for samples store frozen.

The method blanks had measurable mass above the reporting limit.

The duplicate RPDs were within limits.

Percent Solids

The samples were prepared and analyzed within the recommended holding times for samples stored frozen.

The method blank was clean at the reporting limits.

QUALIFIERS AND NOTES

Qualifier	Definition
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Surrogates & Spike Standards Used

Type	Standard ID	Vol uL	Analyst	Witness

(V) indicates a virtual standard combining two or more physical standards. In these cases the Standard ID refers to the virtual standard, not the parent standards

If a Standard ID is missing, but should be present, check the standard definition in Element LIMS to be sure Standard Info 6 has the correct letter or number designator matching the vial designator inthe Standard ID column. If it is correct, check the batch and bench sheet in Element LIMS to be sure the correct standards are selected for surrogate(s) and spike(s).

Prep Instructions	
SPECIAL INSTRUCTIONS: 1. Weigh into 250mL Centrifuge bottles. 2. Use 10 g neutral Sodium Sulfate for the blanks. 3. Add 1:1 DCM/Acetone. 4. Add Sodium Sulfate to samples just prior to tissuemizzing. 5. Tissuemize (2X) with 1:1 DCM/Acetone + (1X) DCM only. 6. Collect in 500mL flask + Lg Funnel with glasswool (NO Sodium Sulfate). 7. KD (Normal drying column) at 100°C. 8. Turbovap to 1mL. 9. Record weights of empty tins from Analytical Balance in Tare Weight column. 10. Transfer the 1mL extract into the empty tins. 11. Dry extracts in tins under hood for a minimum of 2 hours. 12. Store extracts in a desiccator over night. 13. Re-weigh tins with Analytical Balance. 14. Record weights in Tare+Sample Weight column. 15. %Lipids are calculated by entering on LIMS.

Surrogates & Spike Standards Used

Type	Standard ID	Vol uL	Analyst	Witness

(V) indicates a virtual standard combining two or more physical standards. In these cases the Standard ID refers to the virtual standard, not the parent standards.

If a Standard ID is missing, but should be present, check the standard definition in Element LIMS to be sure Standard Info 6 has the correct letter or number designator matching the vial designator inthe Standard ID column. If it is correct, check the batch and bench sheet in Element LIMS to be sure the correct standards are selected for surrogate(s) and spike(s).

Prep Instructions	
SPECIAL INSTRUCTIONS: 1. Weigh into 250mL Centrifuge bottles. 2. Use 10 g neutral Sodium Sulfate for the blanks. 3. Add 1:1 DCM/Acetone. 4. Add Sodium Sulfate to samples just prior to tissuemizzing. 5. Tissuemize (2X) with 1:1 DCM/Acetone + (1X) DCM only. 6. Collect in 500mL flask + Lg Funnel with glasswool (NO Sodium Sulfate). 7. KD (Normal drying column) at 100°C. 8. Turbovap to 1mL. 9. Record weights of empty tins from Analytical Balance in Tare Weight column. 10. Transfer the 1mL extract into the empty tins. 11. Dry extracts in tins under hood for a minimum of 2 hours. 12. Store extracts in a desiccator over night. 13. Re-weigh tins with Analytical Balance. 14. Record weights in Tare+Sample Weight column. 15. %Lipids are calculated by entering on LIMS.

RE: AOC3 Clam Collection

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)	Associated SDG ID(s)
18F0364	N/A

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclose Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

Susan Dunnihoo, Director, Client Services

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Cooler Receipt Form

ARI Client: Windward

Project Name: _____

COC No(s): _____ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: _____

Assigned ARI Job No: _____

Tracking No: _____ NA

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of to cooler?	YES	(NO)
Were custody papers included with the cooler?	(YES)	NO
Were custody papers properly filled out (ink, signed, etc.)	(YES)	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 5.8°C
Time: 1632

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: D005206

Cooler Accepted by: JSW Date: 05/15/18 Time: 1630

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	(NO)
What kind of packing material was used? ...	Bubble Wrap (Wet Ice) Gel Packs (Baggies) Foam Block Paper Other: _____		
Was sufficient ice used (if appropriate)?	NA	(YES)	NO
Were all bottles sealed in individual plastic bags?		(YES)	NO
Did all bottles arrive in good condition (unbroken)?		(YES)	NO
Were all bottle labels complete and legible?		YES	NO
Did the number of containers listed on COC match with the number of containers received?		YES	NO
Did all bottle labels and tags agree with custody papers?		YES	NO
Were all bottles used correct for the requested analyses?		YES	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)...	NA	YES	NO
Were all VOC vials free of air bubbles?	NA	YES	NO
Was sufficient amount of sample sent in each bottle?		YES	NO
Date VOC Trip Blank was made at ARI	NA	_____	

Was Sample Split by ARI : NA YES Date/Time: _____ Equipment: _____ Split by: _____

Samples Logged by: _____ Date: _____ Time: _____

Cooler Receipt Form

ARI Client: Hubbard

COC No(s): _____ NA

Assigned ARI Job No: _____

Project Name: _____

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: _____

Tracking No: _____ NA

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of to cooler?	YES	(NO)
Were custody papers included with the cooler?	(YES)	NO
Were custody papers properly filled out (ink, signed, etc.)	(YES)	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 2.3°C 4.8°C

Time: 1625

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: D005206

Cooler Accepted by: JBW Date: 05/16/18 Time: 1625

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	(NO)
What kind of packing material was used? ... Bubble Wrap (Wet Ice) Gel Packs (Baggies) Foam Block Paper Other: _____			
Was sufficient ice used (if appropriate)?	NA	(YES)	NO
Were all bottles sealed in individual plastic bags?		(YES)	NO
Did all bottles arrive in good condition (unbroken)?		(YES)	NO
Were all bottle labels complete and legible?		YES	NO
Did the number of containers listed on COC match with the number of containers received?		YES	NO
Did all bottle labels and tags agree with custody papers?		YES	NO
Were all bottles used correct for the requested analyses?		YES	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)...	NA	YES	NO
Were all VOC vials free of air bubbles?	NA	YES	NO
Was sufficient amount of sample sent in each bottle?		YES	NO
Date VOC Trip Blank was made at ARI	NA		

Was Sample Split by ARI : NA YES Date/Time: _____ Equipment: _____ Split by: _____

Cooler Receipt Form

ARI Client: Windward

Project Name: _____

COC No(s): _____ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: _____

Assigned ARI Job No: _____

Tracking No: _____ NA

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES NO

Were custody papers included with the cooler? ..... YES NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 3.4°C 1.7°C 2.8°C

Time: 1735

If cooler temperature is out of compliance fill out form 00070F (cooler # 1 / 2 / 3) Temp Gun ID#: 90005206

Cooler Accepted by: JAW Date: 05/18/18 Time: 1735

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler? ..... YES NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: _____

Was sufficient ice used (if appropriate)? ..... NA YES NO

Were all bottles sealed in individual plastic bags? ..... YES NO

Did all bottles arrive in good condition (unbroken)? ..... YES NO

Were all bottle labels complete and legible? ..... YES NO

Did the number of containers listed on COC match with the number of containers received? ..... YES NO

Did all bottle labels and tags agree with custody papers? ..... YES NO

Were all bottles used correct for the requested analyses? ..... YES NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES NO

Were all VOC vials free of air bubbles? ..... NA YES NO

Was sufficient amount of sample sent in each bottle? ..... YES NO

Date VOC Trip Blank was made at ARI..... NA _____

Was Sample Split by ARI : NA YES Date/Time:_____ Equipment:_____ Split by:_____

Samples Logged by: _____ Date: _____ Time: _____

Sample receipt

Samples as listed on the preceding page were received 21-May-2018 10:10 under ARI work order 18F0364. For details regarding sample receipt, please refer to the Cooler Receipt Form.

Samples were homogenized according to the scheme in the tables included here.

Semivolatiles - EPA Method SW8270D

The samples were extracted and analyzed within the recommended holding times for samples stored frozen.

The initial and continuing calibrations were within method requirements, except for high recovery of 2,4,6- Tribromophenol in SGG051-CCV1. The associated results have been "Q"-flagged and none of the target list of compounds are associated with the surrogate.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank was clean at the reporting limits.

The LCS percent recoveries were within control limits.

The recovery of bis(2-ethylhexyl)phthalate was high in the matrix spike at 136% (limit 130%). The outlier has been flagged on the summary sheet.

Polynuclear Aromatic Hydrocarbons (PAH) - EPA Method SW8270D-SIM

The samples were extracted and analyzed within the recommended holding times for samples stored frozen.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank was clean at the reporting limits.

The LCS percent recoveries were within control limits.

The matrix Spike/matrix spike duplicate recoveries and RPD were within limits.

PCB Aroclors - EPA Method SW8082A

The samples were extracted and analyzed within the recommended holding times for samples stored frozen.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

Windward Environmental, LLC	Project: AOC3 Clam Collection	
200 West Mercer Street, Suite 401	Project Number: Task 4	**Reported:**
Seattle WA, 98119-3958	Project Manager: Amara Vandervort	21-Jul-2018 13:17

Case Narrative

The surrogate percent recoveries were within control limits.

The method blank was clean at the reporting limits.

The LCS percent recoveries were within control limits.

The matrix spike/matrix spike duplicate recoveries and RPD were within limits.

Butyl Tin - EPA Method SW8270D-SIM

The samples were extracted and analyzed within the recommended holding times for samples stored frozen.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The method blank showed high recovery of tripropyltin in the method blank at 137% (limit 130%). All other surrogate results were within limits.

The method blank was clean at the reporting limits.

The LCS percent recovery was within control limits.

The matrix spike/matrix spike duplicate recoveries and RPD were within limits.

Total vanadium - EPA Method 6020A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blanks were clean at the reporting limits.

The LCS percent recoveries were within control limits.

Duplicate RPD was high at 25.2% (limit 20%). The data was checked and the outlier flagged on the summary sheet. Matrix spike/matrix spike recoveries and RPDs were within limits.

Percent Lipids

The samples were prepared and analyzed within the recommended holding times stored frozen.

Initial and continuing calibrations were within method requirements.

The method blank had response above the calculated reporting limit.

The duplicate RPD was within limits.

QUALIFIERS AND NOTES

Qualifier	Definition
U	This analyte is not detected above the applicable reporting or detection limit.
Q	Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20% RSD, <20% drift or minimum RRF)
P1	The reported value is greater than 40% difference between the concentrations determined on two GC columns where applicable.
J	Estimated concentration value detected below the reporting limit.
H	Hold time violation - Hold time was exceeded.
D	The reported value is from a dilution
*	Flagged value is not within established control limits.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

LDW18-S1-CLWB-Comp1

Type	Standard ID	Vol uL	Analyst	Witness
Surrogate 100/150µg/mL	A G005127 Exp: 12/05/2018	50µL		CT
Full List Spike (Freezer) 100µg/mL	7 G001872 (V) Exp: 07/30/2018	50µL		CT
Base Spike 200µg/mL	56 G001872 (V) Exp: 07/30/2018	50µL		CT
Acid Spike 100/200µg/mL	38 G001872 (V) Exp: 07/30/2018	50µL		CT

(V) indicates a virtual standard combining two or more physical standards. In these cases the Standard ID refers to the virtual standard, not the parent standards.

If a Standard ID is missing, but should be present, check the standard definition in Element LIMS to be sure Standard Info 6 has the correct letter or number designator matching the vial designator inthe Standard ID column. If it is correct, check the batch and bench sheet in Element LIMS to be sure the correct standards are selected for surrogate(s) and spike(s).

Prepared using: EPA 3550C-Mod (Ultrasonic)

(20-200 ppb) or (0.2-2 ppb Low LVL SepF) in Tissue (Version:BEHP PCP HCB Carbazole only)

Prep Instructions	
SPECIAL INSTRUCTIONS: 1. Weigh into 250mL centrifuge bottle. 2. Add surr/spike and add 1:1 DCM/Acetone. 3. Add sodium sulfate just before tissuemizing. 4. Extract 2 times with 1:1 DCM/Acetone followed by 3rd time with DCM only. 5. Collect in 500mL flask with funnel and glasswool plug (may us small amount of sodium sulfate if fines are present). 6. KD Add 10mL Hexane directly to extract in KD. 7. GPC REQ = KD on 100°C water bath to 5mL. Transfer to TubroTube in DCM. 8. (After GPC) KD at 80°C. 9.TurboVap 10. Vial in DCM. 11. Water Wash 12. 0.5mL split for GC. A. Need Total Solids Y / (N) B. Archive/Freeze Y / (N)

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
198	Base Peak, 100% relative abundance	100.00
51	10.00 - 80.00% of mass 198	45.29
68	Less than 2.00% of mass 69	0.62 (1.38)
69	Mass 69 relative abundance	44.91
70	Less than 2.00% of mass 69	0.05 (0.12)
127	10.00 - 80.00% of mass 198	56.32
197	Less than 2.00% of mass 198	1.06
199	5.00 - 9.00% of mass 198	6.46
275	10.00 - 60.00% of mass 198	29.34
365	Greater than 1.00% of mass 198	8.40
441	0.01 - 24.00% of mass 442	16.14 (15.45)
442	50.00 - 200.00% of mass 198	104.49
443	15.00 - 24.00% of mass 442	21.58 (20.65)

Data File: NT1018070501.D
Spectrum: Avg. Scans 423-425 (6.35), Background Scan 418

ARI Labs, Inc.

INTERNAL STANDARD COMPOUNDS
AREA AND RT SUMMARY

Instrument ID: nt10.i
Lab File ID: NT1018070504.D
Lab Smp Id: SGG0051-LCV1
Analysis Type: SV
Quant Type: ISTD
Operator: YZ
Method File: \\Target\share\chem3\nt10.i\20180705.b\ABN.m
Misc Info:

Calibration Date: 05-JUL-2018
Calibration Time: 11:56
Level:
Sample Type:

Test Mode:
Use Initial Calibration Level 5.
