PROJECT NARRATIVE

Basis for the Data Validation

This report presents the results of Summary Validation (EPA Stage 2B) performed on seep and quality control sample data for the Lower Duwamish Waterway Baseline Surface Water Sampling project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Analytical Resources, Inc. (ARI), Tukwila, Washington and SGS Axys, Sidney BC, Canada. The analytical methods and EcoChem project chemists are listed below.

Analysis	Method	Primary Review	Secondary Review
Dioxins & Furans	EPA 1613B	R. Frans	C. Frans

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Lower Duwamish Waterway Group Seep Collection and Chemical Analyses – Quality Assurance Project Plan and Appendix C* (Windward, March 2018) and *USEPA National Functional Guidelines for Chlorinated Dioxin/Furan Data Review* (USEPA, September 2011).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R, the data are to be rejected and should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced previously.

Data qualifier definitions, reason codes, and validation criteria are included as Appendix A. A Qualified Data Summary Table is included in Appendix B. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	✓	Ongoing Precision and Recovery (OPR)
✓	System Performance and Resolution Checks	1	Certified Reference Material
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Calibration Verification (CVER)	✓	Target Analyte List
✓	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	2	Compound Identification
1	Labeled Compound Recovery	✓	Compound Quantitation
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)		

✓Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, Holding Times

As stated in validation guidance documents, sample shipping coolers arrived at the laboratory within the advisory temperature range of ≤6°C.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values cannot be considered as positive identifications, but are "estimated maximum possible concentrations". When these occurred in the method blank the results were considered as false positives. No action levels were established for these analytes.

Method blanks were analyzed at the appropriate frequency. Contaminant levels, associated samples, and action levels are documented in the data validation worksheets. Although detections were reported for Total TCDD and Total HxCDD; no results were qualified.

The laboratory case narrative noted that the extract for the method blank went dry during a concentration step of sample clean-up. The labeled compounds were in control with recoveries between 71.4% and 91% and because the isotope dilution method of quantitation corrects for such potential losses, data were not deemed significantly affected and no qualifiers were assigned

Field Blanks

No Field Blanks samples were analyzed with this data set.

Matrix Spike/Matrix Spike Duplicate

No Matrix Spike/Matrix Spike duplicate samples were analyzed with this data set. Accuracy was assessed using the OPR and OPR Duplicate recoveries as well as the labeled compound recoveries. Precision was assessed using the relative percent difference values from the OPR and OPR Duplicate samples.

Certified Reference Material

No certified reference material was analyzed with this analytical data set.

Field Duplicates

No field duplicate samples were analyzed with this analytical data set.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF detects using an alternate GC column. The DB5 column that is typically used cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. 2,3,7,8-TCDF was not detected, confirmation was not required.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. An EMPC value is reported when a peak was detected but did not meet identification criteria, as required by the method; therefore, the result cannot be considered as a positive identification for the analyte. To indicate that the reported result for an individual analyte is in effect an elevated detection limit, the EMPC values were qualified as not detected (U-25) for native compound results below the reporting limit and were estimated (J-25) for homolog values and native compound results greater than the reporting limit.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed the specified analytical method. Accuracy was acceptable, as demonstrated by the labeled compound and OPR recoveries. With the exceptions noted above, precision was also acceptable as indicated by the RPD values for the OPR and OPR duplicate and field duplicate samples.

Data were qualified as not detected or estimated to indicate that EMPC values represent elevated detection limits.

All data, as qualified, are acceptable for use.

DATA QUALIFIER DEFINITIONS
REASON CODES
AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES
Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

PROJECT NARRATIVE

Basis for the Data Validation

This report presents the results of Summary Validation (EPA Stage 4 and Stage 2B) performed on seep and quality control sample data for the Lower Duwamish Waterway Baseline Surface Water Sampling project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Analytical Resources, Inc. (ARI), Tukwila, Washington and SGS Axys, Sidney BC, Canada. The analytical methods and EcoChem project chemists are listed below.

Analysis	Method	Primary Review	Secondary Review
Semivolatile Organic Compounds	SW 8270D	E. Clayton	C. Frans
Polynuclear Aromatic Hydrocarbon (PAH) Compounds	SW 8270D-SIM		
PCB Aroclors	SW 8082A		
Dioxins & Furans	EPA 1613B		
Total Metals	SW 6020A/ SW 7470A		
Total and Dissolved Organic Carbon	SM5310 B-00		
Total Suspended Solids	SM 2540 D-97		

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Lower Duwamish Waterway Group Seep Collection and Chemical Analyses – Quality Assurance Project Plan and Appendix C* (Windward, March 2018); *USEPA National Functional Guidelines for Chlorinated Dioxin/Furan Data Review* (USEPA, September 2011); *National Functional Guidelines for Organic Data Review* (USEPA 2008 & 2014); and *National Functional Guidelines for Inorganic Data Review* (USEPA 2010).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R, the data are to be rejected and should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced previously.

Data qualifier definitions, reason codes, and validation criteria are included as Appendix A. A Qualified Data Summary Table is included in Appendix B. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Lower Duwamish Waterway: Seeps
Semi-Volatile Organic Compounds by EPA SW8270D

This report documents the review of analytical data from the analysis of seep samples and the associated laboratory quality control (QC) samples. Samples were analyzed by Analytical Resources, Inc. (ARI), Tukwila, Washington. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
18F0185	27 Seep & 1 Field Blank	EPA Stage 2B & Stage 4 (batch BGF0434)

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table:

1	Sample Receipt, Preservation, and Holding Times	✓	Matrix Spike/Matrix Spike Duplicates (MS/MSD)
✓	GC/MS Instrument Performance	1	Field Duplicates
✓	Initial Calibration (ICAL)	✓	Target Analyte List
✓	Continuing Calibration (CCAL)	✓	Internal Standards
✓	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	✓	Reported Results
✓	Surrogate Compounds	✓	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	1	Calculation Verification

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received several sample coolers greater than the upper control limit at temperatures ranging from 6.9°C to 13.9°C. Samples were received at the laboratory within several hours of sampling on each collection date; no qualifiers were required.

Field Blanks

Sample LDW18-SP-RB1 was submitted as a rinsate blank. This field blank was associated with all seep samples collected. All acceptance criteria were met.

Surrogate Compounds

The surrogate compounds 2,4,6-tribromophenol, 2-fluorobiphenyl, 2-fluorophenol, nitrobenzene-d5, phenol-d6, terphenyl-d14, 1,2-dichlorobenzene-d4, and 2-chlorophenol were added to all field and batch QC samples. When two or more surrogate %R values are less than the control limits and indicate a potential low bias, associated results are estimated (J/UJ-13L). When two or more surrogate %R values are greater than the control limits and indicate a potential high bias, only the positive results for a sample are estimated (J-13H). If there is one surrogate outlier that is less than 10% recovery, the reporting limits for that fraction are rejected (R-13L) and the detections are estimated (J-13L). With the exceptions noted below, all surrogate spike recoveries were within the laboratory control limits.

For Sample LDW18-SP-73, the %R value for terphenyl-d14 was greater than the lower control limit. The %R values for fluoranthene-10 were less than the control limit for the laboratory control sample and a matrix spike sample. No qualifiers were added for the single outlier or QC samples.

Field Duplicates

The QAPP RPD control limit is 30% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 1x the RL.

Samples LDW18-SP-24 and LDW18-SP-24-FD were submitted as field duplicates. All acceptance criteria were met.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. Accuracy was acceptable as demonstrated by the surrogate, LCS, and MS/MSD recovery values. Precision was acceptable as demonstrated by the RPD values for the MS/MSD and field duplicate analyses.

No data were qualified for any reason.

All data, as reported, are acceptable for use.

[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received several sample coolers greater than the upper control limit at temperatures ranging from 6.9°C to 13.9°C. Samples were received at the laboratory within several hours of sampling on each collection date; no qualifiers were required.

Laboratory Blanks

A method blank was analyzed at the required frequency of one per batch of 20 or fewer samples. Action levels were established at five times (5x) the concentration reported in the field blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results.

Naphthalene, 2-methylnaphthalene, and benzo(b)fluoranthene were detected. Associated sample results for 2-methylnaphthalene and benzo(b)fluoranthene were greater than the action limits, no qualifiers were required. Results for naphthalene in Samples LDW18-SP-RB1, LDW18-SP-30, LDW18-SP-32, LDW18-SP-35, LDW18-SP-38, and LDW18-SP-42 were qualified as not detected (U-7).

Field Blanks

Action levels were established at five times (5x) the concentration reported in the field blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-6). No action is taken if the sample result is greater than the action level, or for non-detected results.

Sample LDW18-SP-RB1 was submitted as a rinsate blank. This field blank was associated with all seep samples collected. After method blank evaluation, fluorene, phenanthrene, naphthalene, and 2-methylnaphthalene were detected in the field blank. All associated results less than the action level were qualified as not detected (U-6).

Surrogate Compounds

The surrogate compounds d10-2-methylnaphthalene, fluoranthene-D10, and d14-dibenzo(a,h)anthracene, were added to all field and batch QC samples. When two or more surrogate %R values are below the control limits and indicate a potential low bias, associated results are estimated (J/UJ-13L). When two or more surrogate %R values are greater than the control limit and indicate a potential high bias, only the positive results for a sample are estimated (J-13H). If there is one surrogate outlier that is less than 10% recovery, the reporting limits for that fraction are rejected (R-13L) and the detections are estimated (J-13L). With the exceptions noted below, all surrogate spike recoveries were within the laboratory control limits.

For Samples LDW18-SP-38 and LDW18-SP-42, the %R values for 2-methylnaphthalene-d10 and fluoranthene-d10 were less than the lower control limits. The base-neutral compounds were estimated (J/UJ-13L).

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. No action is taken unless both the MS and MSD percent recovery (%R) values are outside the control limits for MS/MSD %R outliers. Precision is evaluated using the RPD values calculated between the MS and MSD results. Any RPD values outside the control limits indicate uncertainty in the measured results for the sample. Qualifiers were only issued to the parent sample.

When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-8). Only the associated positive results are estimated (J-8) if the %R values indicate a potential high bias. Associated positive results are estimated (J-9) if the RPD values indicate uncertainty.

The MS/MSD analyses were performed using Sample LDW18-SP-43. The MS/MSD RPD values for 2-methylnaphthalene and naphthalene were greater than the control limit. Although 2-methylnaphthalene was detected in the parent sample, it has been flagged as not detected due to rinsate blank contamination. Naphthalene was also not detected. No qualifiers were required for matrix spike imprecision.

Field Duplicates

The QAPP RPD control limit is 30% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 1x the RL.

Samples LDW18-SP-24 and LDW18-SP-24-FD were submitted as field duplicates. The absolute difference for phenanthrene was greater than the control limit.

Reporting Limits

Reporting limits for acenaphthene in Samples LDW18-SP-33 and LDW18-SP-77 were elevated due to required dilutions.

Reported Results

Acenaphthene was reported with an "E" flag indicating a result that exceeded the upper calibration range for Samples LDW18-SP-33 and LDW18-SP-77. The "E" flagged results were flagged as do-not-report (DNR-20) in the original analysis and all other results in the dilution analyses were flagged (DNR-11).

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted previously, accuracy was acceptable as demonstrated by the surrogate, LCS, and MS/MSD recovery values. With the exceptions noted above, precision was acceptable as demonstrated by the RPD values for the MS/MSD and field duplicate analyses.

Data were qualified as not detected at the reported concentration due to method blank and field blank contamination. Results were estimated due to surrogate recovery outliers. Data were qualified as do-not report to indicate which result from multiple reported results should not be used.

Data that have been flagged as do-not-report should not be used for any purpose.

All other data, as qualified, are acceptable for use.

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. Accuracy was acceptable as demonstrated by the surrogate, LCS/LCSD, and MS/MSD recoveries. Precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Data were qualified as do-not report to indicate which result from multiple reported results should not be used.

Data flagged as do-not-report should not be used for any reason.

All other data, as qualified, are acceptable for use.

✓Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received one of the sample coolers greater than the advisory temperature range at 6.5°C. No data were affected; no qualifiers were added.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values cannot be considered as positive identifications, but are "estimated maximum possible concentrations". When these occurred in the method blank the results were considered as false positives. No action levels were established for these analytes.

Method blanks were analyzed at the appropriate frequency. Contaminant levels, associated samples, and action levels are documented in the data validation worksheets.

OCDD was detected at a concentration less than the reporting limit. Associated sample results that were less than the 5x action level were qualified as not detected (U-7).

Field Blanks

Sample LDW18-SP-RB1 was submitted as a rinsate blank. This field blank was associated with all seep samples collected. 2,3,7,8-TCDF, 1,2,3,7,8-PeCDF, and total PeCDF were detected and associated results less than the action level were qualified as not detected (U-6).

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Accuracy was assessed using labeled compound recoveries and laboratory control samples. This QC sample goes through the entire extraction process prior to analysis. Precision is evaluated using the field duplicate analyses.

Certified Reference Material

No certified reference material was analyzed with this analytical data set.

Field Duplicates

The QAPP RPD control limit is 20% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 1x the RL.

Samples LDW18-SP-24 and LDW18-SP-24-FD were submitted as field duplicates. All acceptance criteria were met.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF detects using an alternate GC column. The DB5 column that is typically used cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. The laboratory performed a second column confirmation on a DB225 column. All 2,3,7,8-TCDF results reported from the DB5 column were qualified as do-not-report (DNR-11) in favor of the DB225 results.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. An EMPC value is reported when a peak was detected but did not meet identification criteria, as required by the method; therefore, the result cannot be considered as a positive identification for the analyte. To indicate that the reported result for an individual analyte is in effect an elevated detection limit, the EMPC values were qualified as not detected (U-25) for native compound results below the reporting limit and were estimated (J-25) for homolog values and native compound results greater than the reporting limit.

Calculation Verification

Calculation verifications were performed for this sample delivery group (SDG). No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed the specified analytical method. Accuracy was acceptable, as demonstrated by the labeled compound and OPR recoveries. With the exceptions noted above, precision was also acceptable as indicated by the RPD values for the OPR and OPR duplicate and field duplicate samples.

Data were qualified as not detected at the reported concentration due to method blank and field blank contamination. Data were qualified as estimated to indicate that EMPC values represent elevated detection limits.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

1 Quality control outliers are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received several sample coolers greater than the upper control limit at temperatures ranging from 6.9°C to 13.9°C. Samples were received at the laboratory within several hours of sampling on each collection date; no qualifiers were required.

Field Blanks

Action levels were established at five times (5x) the concentration reported in the field blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-6). No action is taken if the sample result is greater than the action level, or for non-detected results.

Sample LDW18-SP-RB1 was submitted as a rinsate blank. This field blank was associated with all seep samples collected. Chromium, copper, and zinc were detected in the field blank. All results less than the action level were qualified as not detected (U-6).

Interference Check Samples

Chromium and/or cadmium were detected in all ICSAs. Because spectral interferences are uncommon for ICPMS and the concentrations observed are usually due to low levels of contaminants in the purchased solutions used by the laboratory; no qualifiers were applied.

Field Duplicates

The QAPP RPD control limit is 25% for mercury and 20% for all other metals for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 1x the RL.

Samples LDW18-SP-24 and LDW18-SP-24-FD were submitted as field duplicates. All acceptance criteria were met.

Reporting Limits

For method 6020, most samples were diluted due to interferences or other factors and the reporting limits were elevated.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were noted.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical methods. Accuracy was acceptable as demonstrated by the LCS and MS/MSD %R values and precision was acceptable as demonstrated by the MS/MSD and laboratory and field duplicate RPD values.

Six results were qualified as not detected at the reported concentration due to field blank contamination.

All data, as qualified, are acceptable for use.

[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received several sample coolers greater than the upper control limit at temperatures ranging from 6.9°C to 13.9°C. Samples were received at the laboratory within several hours of sampling on each collection date; no qualifiers were required.

TOC and/or DOC results were analyzed past the 28-day holding time at 29-34 days for seventeen samples. Associated TOC/DOC results were estimated (J-1).

Field Blanks

Action levels were established at five times (5x) the concentration reported in the field blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-6). No action is taken if the sample result is greater than the action level, or for non-detected results.

Sample LDW18-SP-RB1 was submitted as a field blank. This field blank was associated with all seep samples. TOC was detected in this blank at a concentration less than the reporting limit; results less than the action level were qualified as not detected (U-6).

Field Duplicates

The RPD control limit is 20% for results greater than 5x the reporting limit (RL) for TOC. For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 1x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

Samples LDW18-SP-24 and LDW18-SP-24-FD were submitted as field blanks. The RPD value for total suspended solids was greater than the control limit at 40%RPD.

Laboratory Duplicates

One sample from each laboratory batch was prepared and analyzed in duplicate. Relative percent difference (RPD) values were calculated for detected analytes where results are greater than five times the method detection limit (MDL). With the exception noted below, all RPD values were less than the 20% control limit. Qualifiers are applied to all samples in an analysis batch.

SDG	Parent Sample ID	Analyte	Outlier Type	Action
18F0185	LDW18-SP-57	TSS	Difference > RL	J-9
		TOC	Difference > RL	J-9

Reported Results

Multiple results were reported for each sample for DOC and TOC for the login group 18F0248. The laboratory indicated the instrument experienced the following issues resulting in inconsistent results for the initial runs for both TOC and DOC.

Inject line was spraying the sample onto the side of the combustion tube rather than directly down into the catalyst. The catalyst was saturated with salts from samples and was not flowing properly.

Verifications were sporadically in and out of acceptable limits and samples run during this time had high and low biases depending on the conditions of each injected sample with respect to the sample residue running down the side of the combustion tube.

Some injections were low biased due to part of the sample staying on the side of the combustion tube until the next injection washed it down, while others were high due to the last sample washing into the current injection from the previously mentioned condition.

Because the instrument problems, all results reported from the first two analysis days were qualified as do-not-report (DNR-11).

The DOC results were greater than TOC for samples LDW18-SP-01, LDW18-SP-45, LDW18-SP-47, LDW18-SP-70, and LDW18-SP-86. The results for TOC and DOC were estimated (J-14) in these samples.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical methods. Accuracy was acceptable as demonstrated by the LCS and MS recoveries. With the exceptions noted above precision was acceptable as indicated by the laboratory and field duplicate RPD values.

Results were qualified as not detected due to field blank contamination. Results were estimated based on holding time outliers, laboratory duplicate precision outliers, as well as dissolved results being greater than the corresponding total results.

Data were flagged as do-not-report to indicate which results should be used from multiple reported results.

Data flagged DNR should not be used. All other data, as qualified, are acceptable for use.

DATA QUALIFIER DEFINITIONS
REASON CODES
AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES
Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

PROJECT NARRATIVE

Basis for the Data Validation

This report presents the results of Summary Validation (EPA Stage 4 and Stage 2B) performed on seep and quality control sample data for the Lower Duwamish Waterway Baseline Surface Water Sampling project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Analytical Resources, Inc. (ARI), Tukwila, Washington and SGS Axys, Sidney BC, Canada. The analytical methods and EcoChem project chemists are listed below.

Analysis	Method	Primary Review	Secondary Review
Semivolatile Organic Compounds	SW 8270D	E. Clayton	C. Frans
Polynuclear Aromatic Hydrocarbon (PAH) Compounds	SW 8270D-SIM		
PCB Aroclors	SW 8082A		
Dioxins & Furans	EPA 1613B		
Total Metals	SW 6020A/ SW 7470A		
Total and Dissolved Organic Carbon	SM5310 B-00		
Total Suspended Solids	SM 2540 D-97		

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Lower Duwamish Waterway Group Seep Collection and Chemical Analyses – Quality Assurance Project Plan and Appendix C* (Windward, March 2018); *USEPA National Functional Guidelines for Chlorinated Dioxin/Furan Data Review* (USEPA, September 2011); *National Functional Guidelines for Organic Data Review* (USEPA 2008 & 2014); and *National Functional Guidelines for Inorganic Data Review* (USEPA 2010).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R, the data are to be rejected and should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced previously.

Data qualifier definitions, reason codes, and validation criteria are included as Appendix A. A Qualified Data Summary Table is included in Appendix B. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Lower Duwamish Waterway: Seeps
Semi-Volatile Organic Compounds by EPA SW8270D

This report documents the review of analytical data from the analysis of seep samples and the associated laboratory quality control (QC) samples. Samples were analyzed by Analytical Resources, Inc. (ARI), Tukwila, Washington. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
18F0185	27 Seep & 1 Field Blank	EPA Stage 2B & Stage 4 (batch BGF0434)

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table:

1	Sample Receipt, Preservation, and Holding Times	✓	Matrix Spike/Matrix Spike Duplicates (MS/MSD)
✓	GC/MS Instrument Performance	1	Field Duplicates
✓	Initial Calibration (ICAL)	✓	Target Analyte List
✓	Continuing Calibration (CCAL)	✓	Internal Standards
✓	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	✓	Reported Results
✓	Surrogate Compounds	✓	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	1	Calculation Verification

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received several sample coolers greater than the upper control limit at temperatures ranging from 6.9°C to 13.9°C. Samples were received at the laboratory within several hours of sampling on each collection date; no qualifiers were required.

Field Blanks

Sample LDW18-SP-RB1 was submitted as a rinsate blank. This field blank was associated with all seep samples collected. All acceptance criteria were met.

Surrogate Compounds

The surrogate compounds 2,4,6-tribromophenol, 2-fluorobiphenyl, 2-fluorophenol, nitrobenzene-d5, phenol-d6, terphenyl-d14, 1,2-dichlorobenzene-d4, and 2-chlorophenol were added to all field and batch QC samples. When two or more surrogate %R values are less than the control limits and indicate a potential low bias, associated results are estimated (J/UJ-13L). When two or more surrogate %R values are greater than the control limits and indicate a potential high bias, only the positive results for a sample are estimated (J-13H). If there is one surrogate outlier that is less than 10% recovery, the reporting limits for that fraction are rejected (R-13L) and the detections are estimated (J-13L). With the exceptions noted below, all surrogate spike recoveries were within the laboratory control limits.

For Sample LDW18-SP-73, the %R value for terphenyl-d14 was greater than the lower control limit. The %R values for fluoranthene-10 were less than the control limit for the laboratory control sample and a matrix spike sample. No qualifiers were added for the single outlier or QC samples.

Field Duplicates

The QAPP RPD control limit is 30% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 1x the RL.

Samples LDW18-SP-24 and LDW18-SP-24-FD were submitted as field duplicates. All acceptance criteria were met.

Calculation Verification

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table:

1	Sample Receipt, Preservation, and Holding Times	1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)
✓	GC/MS Instrument Performance	1	Field Duplicates
✓	Initial Calibration (ICAL)	✓	Target Analyte List

2	Surrogate Compounds	✓	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	1	Calculation Verification

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received several sample coolers greater than the upper control limit at temperatures ranging from 6.9°C to 13.9°C. Samples were received at the laboratory within several hours of sampling on each collection date; no qualifiers were required.

Laboratory Blanks

A method blank was analyzed at the required frequency of one per batch of 20 or fewer samples. Action levels were established at five times (5x) the concentration reported in the field blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results.

Naphthalene, 2-methylnaphthalene, and benzo(b)fluoranthene were detected. Associated sample results for 2-methylnaphthalene and benzo(b)fluoranthene were greater than the action limits, no qualifiers were required. Results for naphthalene in Samples LDW18-SP-RB1, LDW18-SP-30, LDW18-SP-32, LDW18-SP-35, LDW18-SP-38, and LDW18-SP-42 were qualified as not detected (U-7).

Field Blanks

Action levels were established at five times (5x) the concentration reported in the field blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-6). No action is taken if the sample result is greater than the action level, or for non-detected results.

Sample LDW18-SP-RB1 was submitted as a rinsate blank. This field blank was associated with all seep samples collected. After method blank evaluation, fluorene, phenanthrene, naphthalene, and 2-methylnaphthalene were detected in the field blank. All associated results less than the action level were qualified as not detected (U-6).

Surrogate Compounds

The surrogate compounds d10-2-methylnaphthalene, fluoranthene-D10, and d14-dibenzo(a,h)anthracene, were added to all field and batch QC samples. When two or more surrogate %R values are below the control limits and indicate a potential low bias, associated results are estimated (J/UJ-13L). When two or more surrogate %R values are greater than the control limit and indicate a potential high bias, only the positive results for a sample are estimated (J-13H). If there is one surrogate outlier that is less than 10% recovery, the reporting limits for that fraction are rejected (R-13L) and the detections are estimated (J-13L). With the exceptions noted below, all surrogate spike recoveries were within the laboratory control limits.

For Samples LDW18-SP-38 and LDW18-SP-42, the %R values for 2-methylnaphthalene-d10 and fluoranthene-d10 were less than the lower control limits. The base-neutral compounds were estimated (J/UJ-13L).

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. No action is taken unless both the MS and MSD percent recovery (%R) values are outside the control limits for MS/MSD %R outliers. Precision is evaluated using the RPD values calculated between the MS and MSD results. Any RPD values outside the control limits indicate uncertainty in the measured results for the sample. Qualifiers were only issued to the parent sample.

When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-8). Only the associated positive results are estimated (J-8) if the %R values indicate a potential high bias. Associated positive results are estimated (J-9) if the RPD values indicate uncertainty.

The MS/MSD analyses were performed using Sample LDW18-SP-43. The MS/MSD RPD values for 2-methylnaphthalene and naphthalene were greater than the control limit. Although 2-methylnaphthalene was detected in the parent sample, it has been flagged as not detected due to rinsate blank contamination. Naphthalene was also not detected. No qualifiers were required for matrix spike imprecision.

Field Duplicates

The QAPP RPD control limit is 30% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 1x the RL.

Samples LDW18-SP-24 and LDW18-SP-24-FD were submitted as field duplicates. The absolute difference for phenanthrene was greater than the control limit.

Reporting Limits

Reporting limits for acenaphthene in Samples LDW18-SP-33 and LDW18-SP-77 were elevated due to required dilutions.

Reported Results

Acenaphthene was reported with an "E" flag indicating a result that exceeded the upper calibration range for Samples LDW18-SP-33 and LDW18-SP-77. The "E" flagged results were flagged as do-not-report (DNR-20) in the original analysis and all other results in the dilution analyses were flagged (DNR-11).

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted previously, accuracy was acceptable as demonstrated by the surrogate, LCS, and MS/MSD recovery values. With the exceptions noted above, precision was acceptable as demonstrated by the RPD values for the MS/MSD and field duplicate analyses.

Data were qualified as not detected at the reported concentration due to method blank and field blank contamination. Results were estimated due to surrogate recovery outliers. Data were qualified as do-not report to indicate which result from multiple reported results should not be used.

Data that have been flagged as do-not-report should not be used for any purpose.

All other data, as qualified, are acceptable for use.

✓Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received one of the sample coolers greater than the advisory temperature range at 6.5°C. No data were affected; no qualifiers were added.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values cannot be considered as positive identifications, but are "estimated maximum possible concentrations". When these occurred in the method blank the results were considered as false positives. No action levels were established for these analytes.

Method blanks were analyzed at the appropriate frequency. Contaminant levels, associated samples, and action levels are documented in the data validation worksheets.

OCDD was detected at a concentration less than the reporting limit. Associated sample results that were less than the 5x action level were qualified as not detected (U-7).

Field Blanks

Sample LDW18-SP-RB1 was submitted as a rinsate blank. This field blank was associated with all seep samples collected. 2,3,7,8-TCDF, 1,2,3,7,8-PeCDF, and total PeCDF were detected and associated results less than the action level were qualified as not detected (U-6).

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Accuracy was assessed using labeled compound recoveries and laboratory control samples. This QC sample goes through the entire extraction process prior to analysis. Precision is evaluated using the field duplicate analyses.

Certified Reference Material

No certified reference material was analyzed with this analytical data set.

Field Duplicates

The QAPP RPD control limit is 20% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 1x the RL.

Samples LDW18-SP-24 and LDW18-SP-24-FD were submitted as field duplicates. All acceptance criteria were met.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF detects using an alternate GC column. The DB5 column that is typically used cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. The laboratory performed a second column confirmation on a DB225 column. All 2,3,7,8-TCDF results reported from the DB5 column were qualified as do-not-report (DNR-11) in favor of the DB225 results.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. An EMPC value is reported when a peak was detected but did not meet identification criteria, as required by the method; therefore, the result cannot be considered as a positive identification for the analyte. To indicate that the reported result for an individual analyte is in effect an elevated detection limit, the EMPC values were qualified as not detected (U-25) for native compound results below the reporting limit and were estimated (J-25) for homolog values and native compound results greater than the reporting limit.

Calculation Verification

Calculation verifications were performed for this sample delivery group (SDG). No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed the specified analytical method. Accuracy was acceptable, as demonstrated by the labeled compound and OPR recoveries. With the exceptions noted above, precision was also acceptable as indicated by the RPD values for the OPR and OPR duplicate and field duplicate samples.

Data were qualified as not detected at the reported concentration due to method blank and field blank contamination. Data were qualified as estimated to indicate that EMPC values represent elevated detection limits.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

1 Quality control outliers are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received several sample coolers greater than the upper control limit at temperatures ranging from 6.9°C to 13.9°C. Samples were received at the laboratory within several hours of sampling on each collection date; no qualifiers were required.

Field Blanks

Action levels were established at five times (5x) the concentration reported in the field blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-6). No action is taken if the sample result is greater than the action level, or for non-detected results.

Sample LDW18-SP-RB1 was submitted as a rinsate blank. This field blank was associated with all seep samples collected.

In the initial analysis of this blank, chromium, copper, and zinc were detected. The result for chromium is anomalous in particular because the concentration of chromium in the rinse blank was at least four times greater than the concentration of chromium in all but two of the associated samples. Based on this observation, the laboratory was asked to redigest and reanalyze the rinse blank sample.

There were no detections of any target analytes in the redigested and reanalyzed aliquot of the rinse blank. The laboratory method blanks for both digestion batches did not have any detections of target analytes. Because the laboratory noted in their case narrative associated with the reanalysis of the rinse blank that the sample as filtered and preserved at the time of the redigestion (outside of holding time) and the results are significantly different from the original analysis with no definitive cause for the difference, the non-detected results for the reanalysis have been estimated, but associated sample results have not been flagged as not detected at the reported concentrations.

The original rinse blank results have been flagged as do-not-report (DNR-11) in favor of the reanalysis results.

Interference Check Samples

Chromium and/or cadmium were detected in all ICSAs. Because spectral interferences are uncommon for ICPMS and the concentrations observed are usually due to low levels of contaminants in the purchased solutions used by the laboratory; no qualifiers were applied.

Field Duplicates

The QAPP RPD control limit is 25% for mercury and 20% for all other metals for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 1x the RL.

Samples LDW18-SP-24 and LDW18-SP-24-FD were submitted as field duplicates. All acceptance criteria were met.

Reporting Limits

For method 6020, most samples were diluted due to interferences or other factors and the reporting limits were elevated.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were noted.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical methods. Accuracy was acceptable as demonstrated by the LCS and MS/MSD %R values and precision was acceptable as demonstrated by the MS/MSD and laboratory and field duplicate RPD values.

Results for the project rinse blank have been estimated due to sample filtration and preservation holding time exceedance.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as reported, are acceptable for use.

Sample Receipt, Preservation, Holding Times

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of ≤6°C. The laboratory received several sample coolers greater than the upper control limit at temperatures ranging from 6.9°C to 13.9°C. Samples were received at the laboratory within several hours of sampling on each collection date; no qualifiers were required.

TOC and/or DOC results were analyzed past the 28-day holding time at 29-34 days for seventeen samples. Associated TOC/DOC results were estimated (J-1).

Field Blanks

Action levels were established at five times (5x) the concentration reported in the field blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-6). No action is taken if the sample result is greater than the action level, or for non-detected results.

Sample LDW18-SP-RB1 was submitted as a field blank. This field blank was associated with all seep samples. TOC was detected in this blank at a concentration less than the reporting limit; results less than the action level were qualified as not detected (U-6).

Field Duplicates

The RPD control limit is 20% for results greater than 5x the reporting limit (RL) for TOC. For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 1x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

Samples LDW18-SP-24 and LDW18-SP-24-FD were submitted as field blanks. The RPD value for total suspended solids was greater than the control limit at 40%RPD.

Laboratory Duplicates

One sample from each laboratory batch was prepared and analyzed in duplicate. Relative percent difference (RPD) values were calculated for detected analytes where results are greater than five times the method detection limit (MDL). With the exception noted below, all RPD values were less than the 20% control limit. Qualifiers are applied to all samples in an analysis batch.

SDG	Parent Sample ID	Analyte	Outlier Type	Action
18F0185	LDW18-SP-57	TSS	Difference > RL	J-9
		TOC	Difference > RL	J-9

Reported Results

Multiple results were reported for each sample for DOC and TOC for the login group 18F0248. The laboratory indicated the instrument experienced the following issues resulting in inconsistent results for the initial runs for both TOC and DOC.

Inject line was spraying the sample onto the side of the combustion tube rather than directly down into the catalyst. The catalyst was saturated with salts from samples and was not flowing properly.

Verifications were sporadically in and out of acceptable limits and samples run during this time had high and low biases depending on the conditions of each injected sample with respect to the sample residue running down the side of the combustion tube.

Some injections were low biased due to part of the sample staying on the side of the combustion tube until the next injection washed it down, while others were high due to the last sample washing into the current injection from the previously mentioned condition.

Because the instrument problems, all results reported from the first two analysis days were qualified as do-not-report (DNR-11).

The DOC results were greater than TOC for samples LDW18-SP-01, LDW18-SP-45, LDW18-SP-47, LDW18-SP-70, and LDW18-SP-86. The results for TOC and DOC were estimated (J-14) in these samples.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical methods. Accuracy was acceptable as demonstrated by the LCS and MS recoveries. With the exceptions noted above precision was acceptable as indicated by the laboratory and field duplicate RPD values.

Results were qualified as not detected due to field blank contamination. Results were estimated based on holding time outliers, laboratory duplicate precision outliers, as well as dissolved results being greater than the corresponding total results.

Data were flagged as do-not-report to indicate which results should be used from multiple reported results.

Data flagged DNR should not be used. All other data, as qualified, are acceptable for use.

DATA QUALIFIER DEFINITIONS
REASON CODES
AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES
Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.
